Maltezou, Caterina Ledda, Venerando Rapisarda, Begoña Martínez Jarreta, 2022-12-15 **Writing Strategies and Strategy-Based Instruction in Singapore Primary Schools** Barry Bai, 2016-02-22 This book provides a theoretical and practical framework for understanding the writing strategies used by Singapore primary school students and strategy based writing instruction conducted in Singapore primary schools It

offers a detailed account of how research into primary students writing strategies was investigated in the Singapore context. A unique feature of the book is its two phase design. In Phase One primary school students writing strategies were found to be positively correlated with their English proficiency. In Phase Two useful writing strategies were systematically taught to primary school students through strategy based writing instruction. The book's description of how to teach writing strategies in a series of nine lessons from a teacher's perspective is particularly useful. The implications of this study are relevant for language teachers, teacher educators and researchers.

How to Think in Medicine

Milos Jenicek, 2018-08-06. Mastery of quality health care and patient safety begins as soon as we open the hospital doors for the first time and start acquiring practical experience. The acquisition of such experience includes much more than the development of sensorimotor skills and basic knowledge of sciences. It relies on effective reason, decision making and communication shared by all health professionals including physicians, nurses, dentists, pharmacists and administrators. **How to Think in Medicine: Reasoning, Decision Making and Communications in Health Sciences** is about these essential skills. It describes how physicians and health professionals reason, make decisions and practice medicine. Covering the basic considerations related to clinical and caregiver reasoning, it lays out a roadmap to help those new to health care as well as seasoned veterans overcome the complexities of working for the well being of those who trust us with their physical and mental health. This book provides a step by step breakdown of the reasoning process for clinical work and clinical care. It examines both the general and medical ways of thinking, reasoning, argumentation, fact finding and using evidence. It explores the principles of formal logic as applied to clinical problems and the use of evidence in logical reasoning. In addition to outline the fundamentals of decision making, it integrates coverage of clinical reasoning, risk assessment, diagnosis, treatment and prognosis in evidence based medicine. Presented in four sections, this book discusses the history and position of the problem and the challenge of medical thinking, provides the philosophy, interfacing topics of interest for health sciences professionals including the probabilities, uncertainties, risks and other quantifications in health by steps of clinical work, decision making in clinical and community health care, research and practice. Communication in clinical and community care including how to write medical articles, clinical case studies and case
