Understanding Statistics in the Behavioral Sciences Robert R. Pagano, 2012 Based on over 30 years of successful teaching experience in this course Robert Pagano s introductory text takes an intuitive concepts based approach to descriptive and inferential statistics He uses the sign test to introduce inferential statistics empirically derived sampling distributions many visual aids and lots of interesting examples to promote reader understanding One of the hallmarks of this text is the positive feedback from users even those not mathematically inclined praise the text for its clarity detailed presentation and use of humor to help make concepts accessible and memorable Thorough explanations precede the introduction of every formula and the exercises that immediately follow include a step by step model that lets readers compare their work against fully solved examples This combination makes the text perfect for anyone building their foundation of knowledge for analyzing statistics in psychology or other social and behavioral sciences

What levels of explanation in the behavioural sciences? Giuseppe Boccignone, Roberto Cordeschi, 2015-07-03 Complex systems are to be seen as typically having multiple levels of organization For instance in the behavioural and cognitive sciences there has been a long lasting trend promoted by the seminal work of David Marr putting focus on three distinct levels of analysis the computational level accounting for the What and Why issues the algorithmic and the implementational levels specifying the How problem However the tremendous developments in neuroscience knowledge about processes at different scales of organization together with the complexity of today cognitive theories suggest that there will hardly be only three levels of explanation Instead there will be many different degrees of commitments corresponding to the different granularities from high level behavioural models to low level neural and molecular models of the cognitive research program For instance Bayesian approaches that are usually advocated for formalizing Marr s computational level and rational behaviour have even been adopted to model synaptic plasticity and axon guidance by molecular gradients As a result we can consider the behavioural scientist as dealing with models at a multiplicity of levels The purpose of this Research Topic in Frontiers in Theoretical and Philosophical Psychology is to promote an

approach to the role of the levels and explanation and models which is of interest for cognitive scientists neuroscientists psychologists behavioural scientists and philosophers of science
