23 Given: $\triangle QRS$ where $m \angle Q = 20^{\circ}$ and $m \angle S = 90^{\circ}$

What is the length, to the nearest meter, of \overline{RS} ?

- A 342 m
- B 364 m
- C 500 m

SOH CAH TOA

label the sides of the triangle:

QR (1000) is hyp

RS (x) is opp

QS is adj

must use sin

 $\sin 20^\circ = x / 1000$

 $1000 (\sin 20^\circ) = x$

342 = x

Trigonometry Ssm Mark McCombs, Sullivan, 2004-06 *Trigonometry* Kaufmann, 1993-11-01 The basic concepts of trigonometry are presented in a simple and straightforward manner and are consistently motivated and reinforced by examples In this second edition the author has added and or changed several examples to better illustrate the concept under discussion The author also has made an effort to guide students to organize their work and to decide when a meaningful short cut might be used This text introduces trigonometric functions as functions of angles as this method is easier and more meaningful for students Following this introduction circular functions can be defined and used in a meaningful way

Trigonometry Randy Gallaher, Kevin Bodden, 2006 Ssm, SG Trigonometry for College Students Karl J. Smith, 1994-01 This text offers a sound mathematical foundation combined with an informal writing style that students can read understand and enjoy Smith defines the circular function on a unit circle first and generalizes the definition in terms of any point on the terminal side of the angle He focuses on learning trigonometry as a function of an angle and emphasizes conceptual understanding Thorough discussion of the use of the graphing calculator enhances students understanding of the material however instructors may choose whether or not to use the graphing calculator in their own development of the material
