Pacific Halibut The Resource Of The Fishery:

The Pacific Halibut, the Resource, and the Fishery F. Heward Bell, 1981 An encyclopedic documentary on the Pacific halibut and its fishery including international agreements **Atlantic Halibut (*Hippoglossus Hippoglossus*) and Pacific Halibut (*H. Stenolepis*) and Their North American Fisheries** Robert J. Trumble, National Research Council Canada, 1993 Atlantic halibut and Pacific halibut off the Atlantic and Pacific coasts of North America share many biological characteristics The conventional separation of the halibut into separate species is not uniformly accepted Reproduction and early life history are nearly identical although the extensive drift of Pacific halibut eggs and larvae and counter migration as juveniles have not been demonstrated for the Atlantic halibut Adult halibut undergo migration from winter spawning grounds along the upper continental slope to summer feeding grounds on the continental shelf The two halibuts show the same pattern of age and growth They exhibit different trophic selectivity as small Atlantic halibut consume a higher proportion of invertebrates as small fish and large Atlantic halibut consume a higher proportion of fish compared to Pacific halibut Halibut management in the Atlantic and Pacific varies dramatically Atlantic halibut in Canada were managed with other groundfish until 1988 and are not managed in the United States Pacific halibut have been managed by an international commission under treaty between the United States and Canada since 1923 Atlantic halibut have produced from 1000 to 5000 t annually mainly off Canada while Pacific halibut have produced 12 000 to 45 000 t mainly off Alaska Biological and fishery data are collected more extensively for the Pacific halibut for which detailed stock assessment is conducted The Pacific Halibut Resource and Fishery in Regulatory Area 2 International Pacific Halibut Commission, 1983 **The Pacific Halibut Resource and Fishery in Regulatory Area 2**, 1983 The Economics of Marine Resources and Conservation Policy James A. Crutchfield, Arnold Zellner, 2010-04-15 How can we manage a so called renewable natural resource such as a fishery when we don't know how renewable it really is James A Crutchfield and Arnold Zellner developed a dynamic and highly successful economic approach to this problem drawing on extensive data from the Pacific halibut industry Although the U S Department of the Interior published a report about their findings in 1962 it had very limited distribution and is now long out of print This book presents a complete reprint of Crutchfield and Zellner's pioneering study together with a new introduction by the authors and four new papers by other scholars These new studies cover the history of the Pacific halibut industry as well as the general and specific contributions of the original work such as price oriented conservation policy to the fields of resource economics and management The resulting volume integrates theory and practice in a clear well contextualized case study that will be important not just for environmental and resource economists but also for leaders of industries dependent on any natural resource Limited Entry in the Pacific Halibut Fishery, 1983 **The Pacific Halibut** International Pacific Halibut Commission, 1987 Fishery Resources of the United States of America U.S. Fish and Wildlife Service, 1945 **Dermersal Fish Resources in Northern Pacific** Osamu Kibesaki, 1966 **Fishery Science and Management** Warren S.

Wooster,2014-11-14 This volume is concerned with the role of science in fishery management While this has traditionally been considered as largely a biological problem with clear biological objectives close examination suggests that management decisions are largely controlled by political social and economic considerations biologically constrained The biologist now has the task of reducing the uncertainties of the venture rather than determining its priorities or its allocation of benefits The uncertainties arise in part because of lack of understanding of the ecological systems involved the limited availability of critical information and the unpredictability of driving forces The volume reviews the assumptions and simplifications of fishery models examines the decision making framework in fishery management and compares management practices in North America Japan and Northern Europe A compilation of fishery management objectives in international agreements and U S laws is included

Successful Fisheries Management Stephen Cunningham,Tim Bostock,2005 This book centres around seven case studies ranging from the Pacific halibut fishery to traditional community based management in India from the Australian Northern prawn fishery to artisanal fishing in Senegal and from co management initiatives in Shetland the management of hake fisheries in Namibia to the Mauritanian fish trade each of which demonstrates some facets of successful fisheries management The failure of fisheries management has been widely analysed its successes far less so Successful Fisheries Management outlines ways to improve fisheries management by drawing on successful management experience to identify the fundamentals of good practice Given the multi faceted nature of success there is no unique recipe The book suggests however that for those involved in the development and promotion of more effective fisheries management the major challenge is not to do the same things better but to do them differently
