Radiation Research: A Twentieth-century Perspective J Champan, 2012-12-02 Radiation Research A Twentieth Century Perspective Volume I Congress Abstracts is a collection of abstracts presented at the Ninth International Congress of Radiation Research convened in Toronto Canada organized by the Radiation Research Society and the North American Hyperthermia Group at the invitation of the International Association of Radiation Research The Toronto venue for this congress recognizes a major role by Canadian scientists in the field of radiation research and also the strong participation of Canadian scientists in the North American Radiation Research Society Original science is shared at these Congresses through Congress lectures symposia presentations and proffered papers The Congress Board of Directors adopted a proposal that all abstracts of scientific presentations should become a permanent record of the official proceedings of the Congress In a manner somewhat analogous to the Canadian postal code system each abstract in this volume is identified at the top left hand corner by a code consisting of both letters and numbers printed on three lines Line one consists of one letter and two numbers that uniquely identify each scientific event The second line consists of a double digit number that designates the sequence of presentation within the specific scientific event The third line consists of a double letter code in which the first letter indicates the day of the week on which abstract material is presented and or discussed and the second letter indicates a morning or afternoon session

Relative Radiation Sensitivities of Human Organ Systems Kurt I. Altman, John T. Lett, 2013-10-22 Advances in Radiation Biology Volume 18 Relative Radiation Sensitivities of Human Organ Systems Part IV focuses on the sensitivity of certain human organ systems to radiation exposure This book discusses the radiation sensitivity of the prostate and radiation therapy of its tumors clinical radiobiology and normal tissue morbidity after breast cancer treatment and approach to optimal therapy and normal tissue sparing The fractionation sensitivity of mammalian tissues trends for improving radiation sensitivity by counteracting chronic and acute hypoxia and predictive assays in radiation therapy are also elaborated This publication likewise covers the basic cellular radiobiology and its significance for radiation therapy and classical theoretical approaches to cellular radiosensitivity This volume is beneficial to clinicians and students intending to gain knowledge of the radiation sensitivities of human organ systems

Biomarkers and Occupational Health Mary Janet Normandy, John P. Peeters, Mortimer L. Mendelsohn, 1995-02-16 Biomarkers have emerged as an exciting tool in disease prevention particularly in the workplace They may be used to document workers exposure to toxins signal the onset of health effects or identify individuals with susceptibility to certain environmental threats But the uncertainty is as great as the potential Are biomarkers suitable for widespread use How can they be deployed in diverse contexts How can biological information about workers be handled fairly and ethically Biomarkers and Occupational Health describes the state of biomarker development including the implications of the Human Genome program and presents a range of viewpoints on the future of biomarkers from the leaders in the field This book explores the three basic types of biomarkers markers of exposure markers of health effects and markers of susceptibility to disease from a variety of perspectives It examines what can be learned from well known exposure sites Hiroshima and Nagasaki Chernobyl and the Hanford nuclear site in the United States for example and a wide range of human cases and animal studies The book also explores the costs and ramifications of developing a large scale program to monitor potentially exposed workers e g at a cleanup site A framework is offered for the use of biomarkers based on the mandate to change the environment before you change the worker The book explores how to identify ethical issues how to set development priorities and how to integrate biomarkers into an occupational health and safety program The authors present the latest technical findings about markers for chronic beryllium disease as well as markers for exposure to carcinogens radiation and chromium including prospects for detecting long past exposures Biomarkers and Occupational Health offers an update on biomarker development and explores a wide scope of issues This book will be important to

Favier,Jean Neve,Patrice Faure,1994-05-30 Radiation Dose Reconstruction for Epidemiologic Uses Committee on an Assessment of CDC Radiation Studies,Commission on Life Sciences,Division on Earth and Life Studies,National Research Council,1995-05-30 Growing public concern about releases of radiation into the environment has focused attention on the measurement of exposure of people living near nuclear weapons production facilities or in areas affected by accidental releases of radiation Radiation Dose Reconstruction for Epidemiologic Uses responds to the need for criteria for dose reconstruction studies particularly if the doses are to be useful in epidemiology This book provides specific and practical recommendations for whether when and how studies should be conducted with an emphasis on public participation Based on the expertise of scientists involved in dozens of dose reconstruction projects this volume Provides an overview of the basic requirements and technical aspects of dose reconstruction Presents lessons to be learned from dose reconstructions after Chernobyl Three Mile Island and elsewhere Explores the potential benefits and limitations of biological markers Discusses how to establish the source term that is to determine what was released Explores methods for identifying the environmental pathways by which radiation reaches the body Offers details on three major categories of dose assessment **British Journal of Radiology** ,1992 The Search for New Anticancer Drugs Michael Waring,B.A. Ponder,1992-11-30 Most of the anti cancer drugs in use today were discovered by happy accident rather than design yet the rational design of better anti cancer drugs remains a cherished goal and one of the most important challenges facing medical science This book represents a compilation of views and progress reports which illustrate the diversity of approaches to the problem Recent research has confirmed the belief that critical genetic changes are at work in cancer cells The genome then DNA in biochemical terms surely represents a critical target for specific chemotherapy of cancer and several chapters address the issue of attacking DNA gene targetting and the like Others deal with principles of rational design exploitation of novel modalities and targets or the nuts and bolts of antitumour drug testing While no attempt has been made to provide a comprehensive coverage of this wide ranging and vitally important subject the present volume in the series will provide much food for thought Thermoradiotherapy and Thermochemotherapy M.Heinrich Seegenschmiedt,Peter Fessenden,Clare C. Vernon,2012-12-06 Hyperthermia has been

found to be of great benefit in combination with radiation therapy or chemotherapy in the management of patients with difficult and complicated tumor problems. It has been demonstrated to increase the efficacy of ionizing radiation when used locally but also has been of help in combination with systemic chemotherapy where hyperthermia is carried out to the total body. Triple modality thermo chemo radiotherapy or other treatment combinations have not been fully evaluated and may demonstrate extended clinical applications in the future. Problems remain with regard to maximizing the effects of hyperthermia as they are influenced by a variety of external and intrinsic factors including bloodflow, microenvironment etc. While the previous volume has summarized more theoretical aspects of hyperthermia i.e. biology, physiology and physics, the present volume compiles the current knowledge relative to the clinical applications of hyperthermia in combination with radiation therapy and/or chemotherapy, providing a comprehensive overview of its use in cancer management.

Radiation Therapy Physics William R. Hendee, Geoffrey S. Ibbott, Eric G. Hendee, 2013-05-13 The Third Edition of *Radiation Therapy Physics* addresses in concise fashion the fundamental diagnostic radiologic physics principles as well as their clinical implications. Along with coverage of the concepts and applications for the radiation treatment of cancer patients, the authors have included reviews of the most up to date instrumentation and critical historical links. The text includes coverage of imaging in therapy planning and surveillance, calibration protocols and precision radiation therapy as well as discussion of relevant regulation and compliance activities. It contains an updated and expanded section on computer applications in radiation therapy and electron beam therapy and features enhanced user friendliness and visual appeal with a new easy to follow format including sidebars and a larger trim size. With its user friendly presentation and broad comprehensive coverage of radiotherapy physics, this Third Edition doubles as a medical text and handy professional reference.

Radiobiological Modelling in Radiation Oncology Roger G. Dale, Bleddyn Jones, 2007 The move towards individually optimised treatments using knowledge of normal tissue and tumour radiosensitivity, proliferation rates etc in combination with three dimensional planning will need mathematical modelling to achieve its full potential. This modelling process will also be capable of helping develop a rational and cost effective use of resources. Amongst radiation oncologists and medical physicists there is a need for a greater understanding of the scope, applications and limitations of radiobiological modelling, particularly in complex situations that include multiple treatment variables the respective influence of which are difficult to separate out by randomised trials without using radiobiologically based analysis. In future there will be increasing use of modelling in practical situations including treatment gap corrections, normal tissue tolerance predictions, optimisation of therapy determined by predictive assays, multi modality schedule design, the simulation of clinical trials, testing contemporaneous medico legal problems and teaching general principals of radiotherapy.

The development of molecules that selectively bind to nucleic acids has provided many details about DNA and RNA recognition The range of such substances such as metal complexes peptides oligonucleotides and a wide array of synthetic organic compounds is as manifold as the functions of nucleic acids Nucleic acid recognition sequences are often found in the major or minor groove of a double strand while other typical interactions include intercalation between base pairs or the formation of triple or quadruple helices One example of a binding mode that has recently been proposed is end stacking on such complex structures as the telomere tetraplex In this comprehensive book internationally recognized experts describe in detail the important aspects of nucleic acid binding and in so doing present impressive approaches to drug design Since typical substances may be created naturally or synthetically emphasis is placed on natural products chemical synthesis the use of combinatorial libraries and structural characterization The whole is rounded off by contributions on molecular modeling as well as investigations into the way in which any given drug interacts with its nucleic acid recognition site
