Radiotherapy for Non-Malignant Disorders Michael Heinrich

Seegenschmiedt, Hans-Bruno Makoski, Klaus-Rüdiger Trott, Luther W. Brady, 2009-04-15 Non malignant or benign diseases can be successfully treated using ionizing radiation technologies It was first proposed in 1898 by Sokoloff who reported the analgesic effects of radiotherapy for painful rheumatoid arthritis Since then the use of these techniques for painful muscle skeletal diseases has gained acceptance particularly in Europe but is still carried out actively in the United States Non malignant diseases that are amenable to radiotherapy can be classified as inflammatory degenerative hyperplastic proliferative functional or other disorders However the topographic and morphologic considerations are more relevant Even though radiation therapy for benign diseases has not been pursued actively since the 1950s more recent interest has dictated that it can be a very effective treatment modality The use of radiotherapy can be justified for invasive and aggressive growth such as that seen with desmoids for cosmetic deformations and functional loss as seen with keloids or endocrine orbitopathy or for life threatening complications such as hepatic hemangiomas or juvenile angiofibromas that occur in children or adolescents Many of the non malignant diseases can have a major and lasting effect on quality of life by causing pain or other serious symptoms particularly when other methods of treatment are unavailable have failed or may induce more side effects It is not generally the first choice of therapy in these non malignant diseases but it is acceptable as defined The book edited by

Digital

Mammography Ulrich Bick, Felix Diekmann, 2010-03-11 Digital Radiography has been firmly established in diagnostic radiology during the last decade. Because of the special requirements of high contrast and spatial resolution needed for roentgen mammography it took some more time to develop digital mammography as a routine radiological tool. Recent technological progress in detector and screen design as well as increased experience with computer applications for image processing have now enabled Digital Mammography to become a mature modality that opens new perspectives for the diagnosis of breast diseases. The editors of this timely new volume Prof Dr U Bick and Dr F Diekmann both well known international leaders in breast imaging have for many years been very active in the frontiers of theoretical and translational clinical research needed to bring digital mammography fully into the sphere of daily clinical radiology. I am very much indebted to the editors as well as to the other internationally recognized experts in the field for their outstanding state of the art contributions to this volume. It is indeed an excellent handbook that covers in depth all aspects of Digital Mammography and thus further enriches our book series Medical Radiology. The highly informative text as well as the numerous well chosen superb illustrations will enable certified radiologists as well as radiologists in training to deepen their knowledge in modern breast imaging. **Dupuytren's Disease and Related Hyperproliferative Disorders** Charles Eaton, M. Heinrich Seegenschmiedt, Ardeshir Bayat, Giulio Gabbiani, Paul Werker, Wolfgang Wach, 2011-12-22 This book is based on results of the 2010 International Symposium on Dupuytren's disease held in Miami Florida but it also includes new data and additional chapters. It is hoped that it will raise awareness of this underestimated condition and promote cooperative efforts to work towards a cure. Up to date information is provided on the epidemiology, biology and pathology of the disease. The principles and specifics of treatment are explored in detail. The indications for and techniques of radiotherapy, minimally invasive treatments and open surgery are fully explained. The role of physical therapy is considered as well as the care of relapse and complications. The treatment of Ledderhose's disease and Peyronie's disease is also discussed. This book provides invaluable information for hand surgeons, podiatrists, orthopedists, radiation therapy specialists and general practitioners. It will help to foster an interdisciplinary approach to the understanding and management of this debilitating disorder.
