**Radiation Protection of Workers in Mines: a Report of Committee 4 of the International Commission on Radiation Protection** International Commission on Radiation Protection,1986 *Radiation Protection of Workers in the Mining and Milling of Radioactive Ores* International Atomic Energy Agency,1983 **Radiation Protection of Workers in Mines** International Commission on Radiological Protection. Committee 4,1986 ICRP Publication 47 ICRP,2014-02-14

The purpose of this report is to describe the principles and applications of methods by which radiation hazards may be controlled in mines Although primarily directed to the uranium mining industry the information presented in this report may be applied in varying degree to all mines Miners are exposed to airborne radon thoron and their short lived decay products to ore dust and in some mines particularly uranium and thorium mines to external gamma and beta radiations In general the short lived radon decay products present the dominant radiation risk Radon is a member of the decay chain of uranium which makes up about 3 ppm of the earth s crust Consequently radon is not limited to mines it occurs everywhere outdoors in usually low concentrations and indoors in higher concentrations In underground mines the concentration of these radioactive contaminants in the absence of adequate control measures can reach relatively high values The scope of this report excludes the treatment of the other hazards mechanical and toxic that are characteristic of all mining operations However the protective measures developed to control radiation exposures may influence the situation regarding other hazards

**Radiation Protection of Workers in Mines (Superseded by ICRP Publication 65 and ICRP Publication 75)** International Commission on Radiological Protection,1986 **Occupational Radiation Protection in the Uranium Mining and Processing Industry** IAEA,2020-06-05 This Safety Report has been developed as part of the IAEA programme on occupational radiation protection to provide for the application of its safety standards in implementing a graded approach to the protection of workers against exposures associated with uranium mining and processing The publication describes the methods of production associated with the uranium industry and provides practical information on the radiological risks to workers in the exploration mining and processing of uranium It is a compilation of detailed information on uranium mining and processing stages and techniques general radiation protection considerations in the relevant industry general methodologies applicable for control monitoring and dose assessment exposure pathways and radiation protection programmes for a range of commonly used mining and processing techniques ICRP Publication 47 ICRP,2014-02-14

The purpose of this report is to describe the principles and applications of methods by which radiation hazards may be controlled in mines Although primarily directed to the uranium mining industry the information presented in this report may be applied in varying degree to all mines Miners are exposed to airborne radon thoron and their short lived decay products to ore dust and in some mines particularly uranium and thorium mines to external gamma and beta radiations In general the short lived radon decay products present the dominant radiation risk Radon is a member of the decay chain of uranium which makes up

about 3 ppm of the earth's crust. Consequently radon is not limited to mines; it occurs everywhere outdoors in usually low concentrations and indoors in higher concentrations. In underground mines the concentration of these radioactive contaminants in the absence of adequate control measures can reach relatively high values. The scope of this report excludes the treatment of the other hazards mechanical and toxic that are characteristic of all mining operations. However the protective measures developed to control radiation exposures may influence the situation regarding other hazards.

**Radiation Protection of Workers in the Mining and Milling of Radioactive Ores - 1983 Edition** International Atomic Energy Agency, 1968      *Radiation protection* United States. Congress. Senate. Committee on Governmental Affairs. Subcommittee on Energy, Nuclear Proliferation, and Federal Services, 1979      *Radiation Protection of Workers in the Mining and Milling of Radioactive Ores* International Atomic Energy Agency, International Labour Organization, World Health Organization, 1983      **Radiation Protection in Medical Radiography** Mary Alice Statkiewicz Sherer, Paula J. Visconti, PhD, DABR, E. Russell Ritenour, Kelli Haynes, MSRS, RT(R), 2013-12-04. A full color resource. *Radiation Protection in Medical Radiography* 7th Edition makes it easy to understand both basic and complex concepts in radiation protection biology and physics. Concise coverage promotes the safe use of ionizing radiation in all imaging modalities including the effects of radiation on humans at the cellular and systemic levels; regulatory and advisory limits for human exposure to radiation and the implementation of radiation safety practices for patients and personnel. This edition includes NEW content on the impact of radiation levels during the nuclear power plant crisis that followed the 2011 earthquake tsunami in Japan. From an author team led by well known radiation protection expert Mary Alice Statkiewicz Sherer, this text has consistently helped students perform well on the ARRT exam. Well written and easy to comprehend. Reviewed by Kirsten Farrell on behalf of RAD Magazine March 2015. Full color illustrations reinforce important information. Convenient, easy to use features include chapter outlines and objectives, highlighting of key terms and bulleted summaries and review questions to enhance comprehension and retention. Clear and concise writing style covers complex concepts in radiation protection biology and physics in a building block approach from basic to more complex concepts. Review questions are included at the end of chapters to assess your comprehension with answers on the Evolve companion website. Coverage of historical radiological disasters includes photos and text on Hiroshima, Chernobyl and Three Mile Island. UPDATED NCRP and ICRP content includes guidelines, regulations and radiation quantities and units explaining the effects of low level ionizing radiation demonstrating the link between radiation and cancer and other diseases and providing the regulatory perspective needed for practice. NEW Discussion of Total Effective Dose Equivalent (TEDE) covers the radiation dosimetry quantity defined by the U.S. Nuclear Regulatory Commission to monitor and control human exposure to ionizing radiation. NEW Coverage of the Fukushima Daiichi Nuclear Plant Crisis addresses the impact of radiation levels following Japan's earthquake tsunami in March 2011. NEW TRACE section covers the Tools for Radiation Awareness and Community Education program, a two phase

approach to radiation dose awareness and overall patient dose reduction through a joint venture of AHRA and Toshiba's Putting Patients First NEW Discussion of the FDA white paper Initiative to Reduce Unnecessary Exposure from Medical Imaging promotes the safe use of medical imaging devices supports informed clinical decision making and leads to increased patient awareness

**Radiation Exposure and Occupational Risks** Eberhard Scherer, Christian Streffer, Klaus-Rüdiger Trott, 2012-12-06 The aim of radiation protection standards is to make the radiation workplace as safe as is humanly possible The gradual evolution over the last 20 years has been towards a more precise definition of the limits for occupational exposure These have been created not only in terms of short term effects but also more importantly in terms of long term risks involving such problems as the potential for carcinogenesis and genetic change In the United States the National Committee for Radiation Protection has recommended that 5 rems 50 mSv should remain as the maximum permissible dose equivalent for total body exposure This would represent the sum of internal and external exposure and should be regarded as the upper limit allowed The community of radiation users is required to conduct its operations in such a manner that the absolute value of the individual's dose equivalent in rems does not exceed his age in years There should be additional limits for tissues and organs based on short term effects Therefore individual organs are limited to dose equivalents low enough to ensure that the dose threshold values are not exceeded

Radiation Protection Management, 1992

**Mine Planning and Equipment Selection 2000** T.N. Michalakopoulos, G.N. Panagiotou, 2018-05-08 This text looks at mine planning and equipment and covers topics such as design and planning of surface and underground mines geotechnical stability in surface and underground mines and mining and the environment
