Radio Circuits and Signals I. S. Gonorovsky, 1981      *Radio Circuits and Signals I...* S. Gonorovskij, 1974      **Circuits, Signals, and Systems** William McC. Siebert, 1986

These twenty lectures have been developed and refined by Professor Siebert during the more than two decades he has been teaching introductory Signals and Systems courses at MIT. The lectures are designed to pursue a variety of goals in parallel to familiarize students with the properties of a fundamental set of analytical tools to show how these tools can be applied to help understand many important concepts and devices in modern communication and control engineering practice to explore some of the mathematical issues behind the powers and limitations of these tools and to begin the development of the vocabulary and grammar common images and metaphors of a general language of signal and system theory. Although broadly organized as a series of lectures many more topics and examples as well as a large set of unusual problems and laboratory exercises are included in the book than would be presented orally. Extensive use is made throughout of knowledge acquired in early courses in elementary electrical and electronic circuits and differential equations.
