Radio, Submillimeter, and X-Ray Telescopes N. G. Basov, 2013-12-01 This volume contains the results of research and development connected with the creation of telescopes intended for the new regions of the spectrum mastered by astronomy the x ray submillimeter far infrared and radio regions The creation of x ray submillimeter and radio telescopes and the receiver apparatus connected with them is a complicated and in many respects unusual problem Therefore the experience accumulated at the Institute of Physics can prove useful to specialists working in this field This volume is intended for scientists engineers and builders occupied in research and development in the fields of x ray submillimeter and radio astronomy as well as for students of advanced courses in these specialties V CONTENTS A Reflecting X Ray Telescope for an Orbital Astrophysical Station 1 I L Beigman L A Vainshtein Yu P Voinov D A Goganov N I Komyak S L Mandel shtam I P Tindo N A Shatskii and A I Shurygin Mirror Systems for X Ray Telescopes 13 I L Beigman L A Vainshtein Yu P Voinov and V P Shevel ko Extra Atmospheric studies in the Submillimeter Range Using On Board Telescopes 35 A E Salomonovich and A s

A Question and Answer Guide to Astronomy Pierre-Yves Bely, Carol Christian, Jean-René Roy, 2017-03-23 Contains 250 questions and answers about astronomy particular for the amateur astronomer [Remote and Robotic Investigations of the Solar System](#) C.R. Kitchin, 2017-09-18 Interest in and knowledge of the techniques utilised to investigate our solar system has been growing rapidly for decades and has now reached a stage of maturity Therefore the time has now arrived for a book that provides a cohesive and coherent account of how we have obtained our present knowledge of solar system objects not including the Sun Remote and Robotic Investigations of the Solar System covers all aspects of solar system observations the instruments their theory and their practical use both on Earth and in space It explores the state of the art telescopes cameras spacecraft and instruments used to analyse the interiors surfaces atmospheres and radiation belts of solar system objects in addition to radio waves gamma rays cosmic rays and neutrinos This book would be ideal for university students undertaking physical science subjects and professionals working in the field in addition to amateur astronomers and anyone interested in learning more about our local astronomical neighbours *Integrated Modeling of Telescopes* Torben Andersen, Anita Enmark, 2011-06-23 Ground or space based telescopes are becoming increasingly more complex and construction budgets are typically in the billion dollar range Facing costs of this magnitude availability of engineering tools for prediction of performance and design optimization is imperative Establishment of simulation models combining different technical disciplines such as Structural Dynamics Control Engineering Optics and Thermal Engineering is indispensable Such models are normally called Integrated Models because they involve many different disciplines The models will play an increasingly larger role for design of future interdisciplinary optical systems in space or on ground The book concentrates on integrated modeling of optical and radio telescopes but the techniques presented will be applicable to a large variety of systems Hence the book will be of interest to optical and radio telescope designers designers of spacecrafts that include optical systems and

to designers of various complex defense systems The book may also find use as a textbook for undergraduate and graduate courses within the field Adaptive Optics is an exciting and relatively new field originally dedicated to correction for blurring when imaging through the atmosphere Although this objective is still of high importance the concept of Adaptive Optics has recently evolved further Today the objective is not only to correct for atmospheric turbulence effects but also for a range of static and dynamical telescope aberrations The notion of adaptive optics has expanded to the field of Wavefront Control correcting for a variety of system aberrations Wavefront control systems maintain form and position of optical elements with high precision under static and dynamical load In many ways such systems replace the steel structures of traditional optical systems thereby providing much lighter systems with a performance not possible before Integrated Modeling is the foremost tool for studies of Wavefront Control for telescopes and complex optics and is therefore now of high importance Springer has recently published two books on telescopes Reflecting Telescope Optics by R Wilson and The Design and Construction of Large Optical Telescopes by P Bely Noting that a new and expensive generation of Extremely Large Telescopes with apertures in the 30 100 m range is on the way the present book on integrated modeling is a good match to the existing books and an appropriate specialization and continuation of some subjects dealt with in those books *International Aerospace Abstracts* ,1998

The Reuven Ramaty High Energy Solar Spectroscopic Imager (RHESSI) - Mission Description and Early Results R.P. Lin,B.R. Dennis,Arnold O. Benz,2003-03-31 The Reuven Ramaty High Energy Solar Spectroscopic Imager RHESSI satellite was launched on 5 February 2002 Its objective is to study the energy release and particle acceleration in solar flares through observations of X rays and gamma rays Two novel technologies are combined to obtain both spectra and images over a broad energy range For the spectroscopy cooled hyperpure germanium detectors are used to cover the energy range from 3 keV to 17 MeV with unprecedented keV class resolution Since focusing optics are not possible for making images with such high energy photons tungsten and molybdenum absorbing grids are used to modulate the X rays and gamma rays coming from the Sun as the spacecraft rotates This allows the spatial Fourier components of the source to be determined so that images can be made in spectral ranges where astronomical images have never been produced before These new instrumental techniques require equally innovative software to reconstruct X ray and gamma ray spectra and images from the observations Ample solar activity abundant observations and an open data policy have attracted many researchers Astronomers face in the RHESSI mission an exciting new scientific potential It has unusually broad possibilities for improving our understanding of the enigmatic solar flare phenomenon that is becoming increasingly important as society depends more and more on space based technologies In this volume the functioning of RHESSI is explained the data analysis techniques including spectroscopy and image reconstruction are introduced and the experiences of the first few months of operation are summarized First scientific results are presented that provide the essential base for more extended studies using RHESSI data and complementary observations by instruments on other spacecraft and at ground based solar

observatories Scientists and students will find here the latest discoveries in solar flare research as well as inspiration for future work The papers will serve as references for the many new discoveries to come from the continuing RHESSI observations

Electronic Imaging in Astronomy Ian S. McLean, 2008-08-17 The second edition of *Electronic Imaging in Astronomy* Detectors and Instrumentation describes the remarkable developments that have taken place in astronomical detectors and instrumentation in recent years from the invention of the charge coupled device CCD in 1970 to the current era of very large telescopes such as the Keck 10 meter telescopes in Hawaii with their laser guide star adaptive optics which rival the image quality of the Hubble Space Telescope Authored by one of the world's foremost experts on the design and development of electronic imaging systems for astronomy this book has been written on several levels to appeal to a broad readership Mathematical expositions are designed to encourage a wider audience especially among the growing community of amateur astronomers with small telescopes with CCD cameras The book can be used at the college level for an introductory course on modern astronomical detectors and instruments and as a supplement for a practical or laboratory class

Terahertz Sensing Technology - Vol 1: Electronic Devices And Advanced Systems Technology Michael S Shur, Dwight L Woolard, William R Loerop, 2003-07-14 The last research frontier in high frequency electronics now lies in the so called THz or submillimeter wave regime between the traditional microwave and infrared domains Significant scientific and technical challenges within the terahertz THz frequency regime have recently motivated an array of new research activities During the last few years major research programs have emerged that are focused on advancing the state of the art in THz frequency electronic technology and on investigating novel applications of THz frequency sensing This book serves as a detailed reference for the new THz frequency technological advances that are emerging across a wide spectrum of sensing and technology areas

ABSTRACT Recent measurements of the diffuse background at millimeter wavelengths indicate no departure from a Planck spectrum near the peak of the blackbody curve Anisotropy measurements indicate no structure at the 2% level in the recently detected submillimeter excess We report here the results of an April 1987 balloon flight of an instrument designed to measure the spectrum of the cosmic background radiation from 1 mm to 3 mm A description of the instrument can be found in Peterson Richards and Timusk 1985 Modifications were made to the apparatus and experimental procedure in order to identify and reduce systematic errors Results from the latest flight indicate that two effects hamper the interpretation of the data These systematic effects will be described in detail in a forthcoming publications they are probably responsible for the non Planckian spectrum measured by Woody and Richards 1981 Attempts to remove the systematic effects from our data yield the upper limits to the CBR brightness temperature in 4 bands from 1 mm to 3 mm There is no evidence for an excess of radiation near the 2.8 K blackbody peak *Extragalactic Astronomy and Cosmology* Peter Schneider, 2014-10-08 This second edition has been updated and substantially expanded Starting with the description of our home galaxy the Milky Way this cogently written textbook introduces the reader to the astronomy of galaxies their structure active galactic nuclei evolution and large scale distribution in the Universe After an extensive and thorough introduction to modern observational and theoretical cosmology the focus turns to the formation of structures and astronomical objects in the early Universe The basics of classical astronomy and stellar astrophysics needed for extragalactic astronomy are provided in the appendix While this book has grown out of introductory university courses on astronomy and astrophysics and includes a set of problems and solutions it will not only benefit undergraduate students and lecturers thanks to the comprehensive coverage of the field even graduate students and researchers specializing in related fields will appreciate it as a valuable reference work
