**Technology in Postwar America** Carroll Pursell,2007-06-29 Carroll Pursell tells the story of the evolution of American technology since World War II His fascinating and surprising history links pop culture icons with landmarks in technological innovation and shows how postwar politics left their mark on everything from television automobiles and genetically engineered crops to contraceptives Tupperware and the Veg O Matic Just as America s domestic and international policies became inextricably linked during the Cold War so did the nation s public and private technologies The spread of the suburbs fed into demands for an interstate highway system which itself became implicated in urban renewal projects Fear of slipping into a postwar economic depression was offset by the creation of a consumers republic in which buying and using consumer goods became the ultimate act of citizenship and a symbol of an American Way of Life Pursell begins with the events of World War II and the increasing belief that technological progress and the science that supported it held the key to a stronger richer and happier America He looks at the effect of returning American servicemen and servicewomen and the Marshall Plan which sought to integrate Western Europe into America s economic business and technological structure He considers the accumulating problems associated with American technological supremacy which by the end of the 1960s led to a crisis of confidence Pursell concludes with an analysis of how consumer technologies create a cultural understanding that makes political technologies acceptable and even seem inevitable while those same political technologies provide both form and content for the technologies found at home and at work By understanding this history Pursell hopes to advance a better understanding of the postwar American self
