Izrael,2002-06-20 To achieve successful solutions to the problems resulting from local distant and global radioactive fallout after nuclear explosions and accidents and to achieve successful retrospective analyses of the radiation conditions from recent observations certain information is needed the distribution of the exposure dose rate in the atmosphere and in a country the distribution of radionuclides in natural environments and the nuclide composition of the radioactive fallout the features of formation of the aerosol particle carriers of the radioactivity and of the nuclide distribution of the particles of different sizes formed under different conditions the processes involved in the migration of radioactive products in different zones and environments the external and internal effects of nuclear radiation on human beings This monograph is devoted to a number of these problems namely to studies of the radioactive fallout composition the formation of the aerosol particles that transport the radioactive products and to the analysis of the external radiation doses resulting from nuclear explosions and or accidents Problems of restoration and rehabilitation of contaminated land areas are also touched upon in the monograph To solve such problems one requires knowledge of the mobility of radionuclides an understanding of their uptake by plants their transportation within the food chain and finally their uptake by animal and or human organisms The results of many years of study of radioactive fallout from atmospheric and underground nuclear explosions and accidents are summarized in this book It is intended for various specialists geophysicists ecologists health experts and inspectors as well as those who are concerned with radioactive contamination of natural environments

**Radiochemistry** Jozsef Konya,Noemi M. Nagy,2012-05-18 The field of nuclear and radiochemistry is wide reaching with results having functions and use across a variety of disciplines Drawing on 40 years of experience in teaching and research this concise book explains the basic principles and applications of the primary areas of nuclear and radiochemistry Separate chapters cover each main area of recent radiochemistry This includes nuclear medicine and chemical aspects of nuclear

power plants namely the problems of nuclear wastes and nuclear analysis both bulk and surface analysis with the analytical methods based on the interactions of radiation with matter Furthermore special attention is paid to thermodynamics of radioisotope tracer methods the very diluted system carrier free radioactive isotopes and the principles of chemical processes with unsealed radioactive sources This book will be helpful to students and researchers in chemistry chemical engineering environmental sciences and specialists working in all fields of radiochemistry Basic concepts are introduced and practical applications explained providing a full view of the subject Laboratory work with unsealed radiochemicals is discussed in details that can be applied in research and authority in the lab environment Radioaktivnye Izotopy V Atmosfere I Ikh Ispolzovanie V Meteorologii I.
