Procedures in Gastrointestinal Radiology Julian Dobranowski, David A. Stringer, Sat Somers, Giles W. Stevenson, 2012-12-06 Dr Dobranowski and his associates are to be highly commended for this excellent manual I am not aware of a similar text covering the subject Although all of us perform gastrointestinal studies in a

different manner this text provides an excellent overview The reader will discover that the text is especially well written and focuses on the important issues relating to GI contrast studies Because Dr Steven's group performs endoscopic procedures they are included in the manual These authors are recognized scholars and leaders in gastrointestinal radiology Thus it is easy to understand why the manual is so well done I am particularly impressed with the emphasis placed on the patient radiologist relationship before during and after completion of a study All of us who teach gastrointestinal radiology are concerned about the decline in the number of gastrointestinal contrast studies We are not sure how we can continue to teach our residents the proper techniques and maintain high quality teaching programs in gastrointestinal radiology A manual of this type is thus timely and appropriate The manual will be a valuable addition to the library of all radiologists It will be particularly useful for residents who are learning how to perform GI contrast studies
