J,2000 Prostate cancer management is improving due to improvements in treatments including watchful waiting radical prostatectomy and external beam radiation therapy However both surgery and radiotherapy have significant side effects particularly incontinence and impotence In this context many clinicians have suggested a revival of brachytherapy or interstitial therapy therapeutic radiation of a tumour by radioactive sources implanted directly into the tumour in contrast to external beam radiotherapy where the radiation source is located outside the patient This report summarises the evidence of brachytherapy s intended and unintended effects and compares these to treatments in current use Cost and cost effectiveness issues are also addressed The report concludes that the evidence is too weak to demonstrate either greater efficacy of brachytherapy compared to other treatments or better cost effectiveness However complications appear to be much less frequent with brachytherapy In sum this technology remains experimental until data are available to confirm its efficacy
