Saga In Steel And Concrete:

The Peregrine Profession Per-Olof Grönberg, 2018-11-26 In The Peregrine Profession Per Olof Gr nberg offers an account of the pre 1930 transnational mobility of engineers and architects educated in the Nordic countries 1880 1919 Outlining a system where learning mobility was more important than labour market mobility the author shows that more than every second graduate went abroad Transnational mobility was stronger from Finland and Norway than from Denmark and Sweden partly because of slower industrialisation and deficiencies in the domestic technical education This mobility included all parts of the world but concentrated on the leading industrial countries in German speaking Europe and North America Significant majorities returned and became agents of technology transfer and technical change Thereby these mobile graduates also became important for Nordic industrialisation Saga in Steel and Concrete.
