State and Local Finances Under Pressure David L. Sjoquist,2003-01-01 State and Local Finances under Pressure explores the future of state and local government fiscal systems given the numerous pressures they face from economic legal technological demographic and political forces It explores how these multiple forces play out in terms of the changes state and local governments should and

are likely to make The contributors argue that state and local governments must make substantial changes and that failure to act is likely to result in adverse effects and increasing pressures for modifications that are more difficult to implement and more politically unpalatable Without reform state and local fiscal systems will grow increasingly out of sync with economic reality The authors suggest that government responses are likely to be evolutionary but that in 25 years the recorded changes will be substantial The first chapter provides a historic perspective of state and local fiscal trends Each of the subsequent chapters describes the nature of one of the pressures state and local governments face including political and legal forces globalization of business demographic and technological changes deregulation of utilities and urban sprawl Policymakers economists political scientists fiscal policy analysts and public administrators will find this comprehensive book of interest

Rethinking Subnational Taxes Mr.Richard Miller Bird,1999-12-01 The assignment of revenues in most developing and transitional countries to the central government has arguably facilitated irresponsible behavior by some subnational governments One way to relieve this problem is to

strengthen subnational tax regimes The paper proposes two approaches to accomplish such strengthening in developing countries The first most applicable to large countries with important regional governments is to establish subnational value added taxes VATs the second is to replace the various unsatisfactory state and local taxes imposed on business by a low rate value added tax levied on the basis of income production origin rather than consumption destination *Research Report*,1994 *Inzell Lectures on Orthogonal Polynomials* Wolfgang zu Castell,2005 Based on the success of Fourier analysis and Hilbert space theory orthogonal expansions undoubtedly count as fundamental concepts of mathematical analysis Along with the need for highly involved functions systems having special properties and analysis on more complicated domains harmonic analysis has steadily increased its importance in modern mathematical analysis Deep connections between harmonic analysis and the theory of special functions have been discovered comparatively late but since then have been exploited in many directions The Inzell Lectures focus on the interrelation between orthogonal polynomials and harmonic analysis The Future of State Taxation David Brunori,1998 State tax systems have generally not changed dramatically over the last 50 years yet they are facing profound challenges Increased international trade the advent of electronic commerce evolving federal state relations and interstate competition are just some of the developments that will have a powerful influence on how states collect revenue This collection of essays from leading tax scholars addresses a wide variety of issues concerning the major sources of state tax revenue and provides insight into what has worked in the past and what will or will not work in the future **Sales Taxation** John Fitzgerald Due,John L. Zodrow,2013 The contributions in this book analyse the policy challenges of taxation in developing countries
