Islam, Science Fiction and Extraterrestrial Life Jörg Matthias Determann, 2020-09-17 The Muslim world is not commonly associated with science fiction Religion and repression have often been blamed for a perceived lack of creativity imagination and future oriented thought However even the most authoritarian Muslim majority countries have produced highly imaginative accounts on one of the frontiers of knowledge astrobiology or the study of life in the universe This book argues that the Islamic tradition has been generally supportive of conceptions of extra terrestrial life and in this engaging account J rg Matthias Determann provides a survey of Arabic Bengali Malay Persian Turkish and Urdu texts and films to show how scientists and artists in and from Muslim majority countries have been at the forefront of the exciting search Determann takes us to little known dimensions of Muslim culture and religion such as wildly popular adaptations of Star Wars and mysterious movements centred on UFOs Repression is shown to have helped science fiction more than hurt it with censorship encouraging authors to disguise criticism of contemporary politics by setting plots in future times and on distant planets The book will be insightful for anyone looking to explore the science culture and politics of the Muslim world and asks what the discovery of extra terrestrial life would mean for one of the greatest faiths

marks the continuation of a tradition commenced well over a half century ago in 1938 Van Nostrand's Scientific Encyclopedia First Edition was published and welcomed by educators worldwide at a time when what we know today as modern science was just getting underway The early encyclopedia was well received by students and educators alike during a critical time span when science became established as a major factor in shaping the progress and economy of individual nations and at the global level A vital need existed for a permanent science reference that could be updated periodically and made conveniently available to audiences that numbered in the millions The pioneering VNSE met these criteria and continues today as a reliable technical information source for making private and public decisions that present a backdrop of technical alternatives

The Imagination of Pentecost Richard Leviton, 1994 Carlo Pietzner speaks out of his own ego directed inner experiences about several motifs inherent to inner striving the problem of self in relationship to the world the disintegration of the three soul forces the transition from sense perception to spiritual perception the reality of evil the condition of loneliness and more

The origin of the cosmos Antonio Pinto Renedo, 2022-01-04 First of all I would like to emphasize that the objective of this book is not to study the universe in a classical or materialistic way but rather to explain all its most important aspects but analyzed from a philosophical or metaphysical point of view It is true that it represents a bold description of the cosmos but this is better than simply denying all soul in matter as materialistic scientists do when they claim that the origin of all material phenomenon without

consciousness is another material phenomenon without consciousness of itself It is surprising that there are so many universities and physics specialists at present yet very few wonder what the real reason for their behavior is or if they are aware of what they are doing But materialistic scientists who deny the soul to people or matter always evasively answer that question saying that if matter and its particles react to the stimuli they receive it is because of other smaller particles but they always try to avoid it The true answer because if matter reacts and acts in this way it is simply because it is alive even if it is in a different way from what biologists call life because it is life even if it is mineral and not organic I would also like this book to serve to find a common point of understanding between the most spiritualistic ancient philosophy and the modern materialistic mentality that helps to understand the part of reason that each one has because it is so unscientific to deny the existence of the spirit or the life of matter as insisting on saying that ancient legends and superstitions are absolute truths The problem of contemporary society is that it lacks moral leadership which causes social anarchy this is due to the fact that religious organizations refuse to adapt to the times for fear that these changes will make them lose their power because if they accept changes in their fundamental ideas that would show that they are not infallible as they would have us believe This is arrogant behavior because they do not want to accept that many of the things in the world are outside of what they believe or understand simply because when their religions were founded they were not yet known This attitude causes a separation between science and religion that can only be redirected through moral renewal In reality spiritualism begins where materialism ends therefore scientists will never be able to understand the intimate reality of matter if they do not accept to analyze it from a spiritual point of view It must be borne in mind that a society that only relies on the material aspects of life but despises the spiritual ones is like a farmer who tries to make plants grow only with soil but without water it is evident that in this way it will fail With this book I have tried to answer in a single book the main philosophical questions that throughout history have confused humanity I have also tried to use clear and direct language so that readers do not have too many difficulties in understand its content I hope you find it useful

Life in the Universe James Newsome
Pierce,2008 This book explores the science of extraterrestrial life with a particular emphasis on the existence of intelligent alien civilizations It introduces the reader to the basic chemistry associated with life on Earth and describes the planetary and stellar environments that allow us to exist It also discusses the likelihood of alien life developing at other locations in our galaxy along with the possibility that we will meet or communicate with them This book is suitable for use as a text in an introductory Life in the Universe course

Different Blood: The Vampire as Alien Margaret L. Carter,2019-03-25 Different blood flows in their veins but our blood quenches their thirst From Bram Stoker s 1897 creation of Count Dracula portrayed as a foreign invader bent on the conquest of England the literary vampire has symbolized the Other whether his or her otherness arises from racial ethnic

sexual or species difference Even before the bloodsucking Martians of H G Wells War of the Worlds however popular fiction contained a few vampires who were members of alien species rather than supernatural undead Even more intriguing than interplanetary invaders are humanoid and quasi humanoid beings who have evolved to live on Earth among us often camouflaged as our own kind The boom in vampire fiction that began in the 1970s engendered a variety of alien vampires many of them portrayed as sympathetic characters The science fiction vampire is especially suited to the presentation of vampirism as morally neutral rather than inherently evil Different Blood surveys the literary vampire as alien whether extra terrestrial or a different species evolved on Earth from the mid 1800s to the 1990s and analyzes the many uses to which science fiction and fantasy authors have put this theme Their works explore issues of species race ecological responsibility gender eroticism xenophobia parasitism symbiosis intimacy and the bridging of differences An extensive bibliography lists dozens of novels and short stories on the vampire as alien theme many of which are still in print
