Abstract— It is a common phenomenon that some personnel leave an organization after completing a certain period of services to that organization voluntarily or involuntarily due to death, retirement or termination. It usually happens that whenever the policy decisions regarding promotion and target of work or sales to be achieved are revised, then, there will be exit of personnel, which in other words called the attrition or wastage. In any organization like marketing, industrial, software, the depletion of manpower due to policy decisions is quite common. This results in manpower attrition and then recruitment becomes necessary. Frequent recruitment is not advisable due to the cost of the same. Hence recruitment is postponed till a point called the breakdown point of total depletion beyond which the normal activities cannot be continued due to shortage of manpower. This level of allowable manpower attrition is called threshold. In this paper a Stochastic model to determine expected time to recruitment with three sources of depletion of manpower attrition under correlated interarrival times has been derived. It provides the optimal solution because; it takes into consideration the cost of frequent recruitments, depletion of manpower and the cost of shortage of manpower. The Stochastic model discussed in the paper is not only applicable to industry as a whole but also in a wider context of other applicable areas.

Keywords— Attrition, Threshold, Depletion of Manpower, Correlated, Interarrival Times, Optimal Solution.

I. INTRODUCTION

In any organization it usually happens that whenever the policy decisions regarding pay, perquisites, promotion and targets of work or sales to be achieved are revised then there will be exit of personnel, which in other words is called the wastage. The concept of wastage is dealt in details by Barthlomew (1982). In the case of wastages has following i.i.d random variables and the threshold level of wastage being a

random variable, the expected time to recruitment has already been derived by Sathiyamoorthi and Elangovan (1998). It is a common phenomenon that some personnel leave an organization after completing a certain period of services to that organization voluntarily or involuntarily due to death, retirement or termination. It usually happens that whenever the policy decisions regarding promotion and target of work or sales to be achieved are revised, then, there will be exit of personnel, which in other words called the attrition or wastage. In any organization like marketing, industrial, software, the depletion of manpower due to policy decisions is quite common. This results in manpower attrition and then recruitment becomes necessary. Frequent recruitment is not advisable due to the cost of the same. Hence recruitment is postponed till a point called the breakdown point of total depletion beyond which the normal activities cannot be continued due to shortage of manpower. This level of allowable manpower attrition is called threshold. In this Chapter a Stochastic model to determine expected time to recruitment with three sources of depletion of manpower attrition under correlated interarrival times has been derived using the result of Gurland (1955) and Esary et al., (1973). Some quite interesting results cited in the recent literature by Anulpavai and Elangovan (2012, 2013). It provides the optimal solution because; it takes into consideration the cost of frequent recruitments, depletion of manpower and the cost of shortage of manpower. The Stochastic model discussed in the Chapter is not only applicable to industry as a whole but also in a wider context of other applicable areas.

II. ASSUMPTION

- i. The depletion of manpower occurs whenever the policy decisions are announced.
- ii. The interarrival times between decision epochs are random variables are constantly correlated and exchangeable but not independent.
- iii. The depletion of manpower also occurs due to transfer of personnel and the interarrival times between successive epochs of transfer are i.i.d. random variables having exponential distribution with parameter λ .
