Sex And Evolution Mpb 8:

Nonverbal Communication in Close Relationships Robert J. Sternberg, Aleksandra Kostić, 2022-03-15 This book is an up to date compendium of knowledge on the secret language of close relationships namely nonverbal routes of communication In close relationships as everyone learns sooner or later the usefulness of words can be somewhat limited because people a mean different things by the same words b mean the same thing by different words c sometimes find it hard to express their feelings in words and d lie Nonverbal signals therefore often provide the best means of communication The book points out how decoding interpreting nonverbal signals is a major key to success because often what people say wholly belies how they feel nonverbal signals reveal their true feelings rather than what they want other people to think their feelings are This book helps decode those secret signals The book is written by the leading worldwide experts in the field of nonverbal communication to ensure accuracy comprehensiveness and timeliness *Geographical Genetics (MPB-38)*

Bryan K. Epperson, 2003-08-31 Population genetics has made great strides in applying statistical analysis and mathematical modeling to understand how genes mutate and spread through populations over time But real populations also live in space Streams mountains and other geographic features often divide populations limit migration or otherwise influence gene flow This book rigorously examines the processes that determine geographic patterns of genetic variation providing a comprehensive guide to their study and interpretation Geographical Genetics has a unique focus on the mathematical relationships of spatial statistical measures of patterns to stochastic processes It also develops the probability and distribution theory of various spatial statistics for analysis of population genetic data detailing exact methods for using various spatial features to make precise inferences about migration natural selection and other dynamic forces The book also reviews the experimental literature on the types of spatial patterns of genetic variation found within and among populations And it makes an unprecedented strong connection between observed measures of spatial patterns and those predicted theoretically Along the way it introduces readers to the mathematics of spatial statistics applications to specific population genetic systems and the relationship between the mathematics of space time processes and the formal theory of geographical genetics Written by a leading authority this is the first comprehensive treatment of geographical genetics It is a much needed guide to the theory techniques and applications of a field that will play an increasingly important role in population biology and ecology

La naturaleza del sexo Pablo Rodríguez Palenzuela, 2024-05-09 Desde el punto de vista de la biología solo hay dos cosas realmente importantes el sexo y la muerte Desde el punto de vista de la biología nos dice Pablo Rodríguez Palenzuela en las primeras páginas de este libro solo hay dos cosas realmente importantes el sexo y la muerte La naturaleza del sexo ofrece una mirada rigurosa y libre de prejuicios a la primera de estas incógnitas combinando una prosa vivaz y entretenida con la investigación más puntera en el campo de la biología del sexo para cubrir una enorme diversidad de temas desde la sexualidad y la reproducción en el reino animal hasta las últimas polémicas entre sexo y género en la especie humana

pasando por la selección sexual o la crianza cooperativa Se trata en definitiva de un texto llamado a despertar gran interés por su enfoque serio y científico a la vez que accesible y muy entretenido y por despejar dudas ideológicas desde el conocimiento biológico The Unified Neutral Theory of Biodiversity and Biogeography (MPB-32) Stephen P. Hubbell, 2001-04-29 Despite its importance and the threat of its global crash biodiversity is poorly understood both empirically and theoretically This work presents a neutral general theory to explain the origin maintenance and loss of biodiversity in a biogeographical context

Ecological Niches and Geographic Distributions (MPB-49) A. Townsend Peterson, 2011-11-20 Terminology conceptual overview biogeography modeling *Self-Organization in Complex Ecosystems. (MPB-42)* Ricard V. Solé, Jordi Bascompte, 2006-03-26 Describing a theoretical view of ecosystems based on how they self organise to produce complex patterns this book focuses on very simple models that despite their simplicity encapsulate fundamental properties of how ecosystems work **The Publishers' Trade List Annual**, 1985 **Sex and Evolution** George Christopher Williams, 1975-03-21 This book explores the relationship between various types of reproduction and the evolutionary process Starting with the concept of meiosis George C Williams states the conditions under which an organism with both sexual and asexual reproductive capacities will employ each mode He argues that in low fecundity higher organisms sexual reproduction is generally maladaptive and persists because there is no ready means of developing an asexual alternative The book then considers the evolutionary development of diverse forms of sexuality such as anisogamy hermaphroditism and the evolution of differences between males and females in reproductive strategy The final two chapters examine the effect of genetic recombination on the evolutionary process itself **Advances in the Study of Behavior**, 2013-05-16 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This volume makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields Initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior Makes another important contribution to the development of the field Presents theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields **Index Medicus**, 2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Sex and Evolution** George Christopher Williams, 1975 This book explores the relationship between various types of reproduction and the evolutionary process Starting with the concept of meiosis George C Williams states the conditions under which an organism with both sexual and asexual reproductive capacities will employ each mode He argues that in low fecundity higher organisms sexual reproduction is generally maladaptive and persists because there is no ready means of developing an asexual alternative The book then considers the evolutionary development of diverse forms of sexuality such as anisogamy hermaphroditism and the evolution of differences between males and females in reproductive strategy The final two chapters examine the effect of genetic recombination on the evolutionary process itself
