## **Sex And Longevity Sexuality Gender Reproduction Parenthood:**

**Sex and Longevity: Sexuality, Gender, Reproduction, Parenthood** J.-M. Robine, T.B.L. Kirkwood, M.

Allard, 2012-12-06 A central concept in the evolutionary theory of senescence is the idea that ageing results from life history trade offs. In particular, the disposable soma theory suggests that longevity is determined through the setting of longevity assurance mechanisms so as to provide an optimal compromise between investments in somatic maintenance including stress resistance and in reproduction. Comparative studies among mammalian species confirm that cells from long lived species appear to have a greater intrinsic capacity to withstand stresses than cells from short lived species. Childbearing at older ages has become increasingly common in modern societies because of demographic changes, medical progress and personal choice. While the detrimental effects of late reproduction on infant mortality and genetic diseases have been well documented, little is known about the possible postponed detrimental effects of late parenting.

### **Handbook of the Biology of Aging**

Edward J. Masoro, Steven N. Austad, 2011-04-28 The Handbook of the Biology of Aging Sixth Edition provides a comprehensive overview of the latest research findings in the biology of aging. Intended as a summary for researchers, it is also adopted as a high level textbook for graduate and upper level undergraduate courses. The Sixth Edition is 20% larger than the Fifth Edition with 21 chapters summarizing the latest findings in research on the biology of aging. The content of the work is virtually 100% new. Though a selected few topics are similar to the Fifth Edition, these chapters are authored by new contributors with new information. The majority of the chapters are completely new in both content and authorship. The Sixth Edition places greater emphasis and coverage on competing and complementary theories of aging, broadening the discussion of conceptual issues. Greater coverage of techniques used to study biological issues of aging include computer modeling, gene profiling and demographic analyses. Coverage of research on *Drosophila* is expanded from one chapter to four. New chapters on mammalian models discuss aging in relation to skeletal muscles, body fat and carbohydrate metabolism, growth hormone and the human female reproductive system. Additional new chapters summarize exciting research on stem cells and cancer, dietary restriction and whether age related diseases are an integral part of aging. The Handbook of the Biology of Aging Sixth Edition is part of the Handbooks on Aging series, including Handbook of the Psychology of Aging and Handbook of Aging and the Social Sciences, also in their 6th editions.

### **Modulating Aging and Longevity** S.I. Rattan, 2003-09-30

After decades of systematic collection of data describing age related changes in organisms, organs, tissues, cells and macromolecules, biogerontologists are now in a position to construct general principles of ageing and explore various possibilities of intervention using rational approaches. While not giving serious consideration to the claims made by charlatans, it cannot be ignored that several researchers are making genuine attempts to test and develop various means of intervention for the prevention and treatment of age related diseases, for regaining the functional abilities and for prolonging the lifespan of experimental organisms. This book provides the most up to date information and a critical evaluation of a variety of

approaches being tried for modulating aging and longevity including dietary supplementation with antioxidants vitamins and hormones genetic engineering life style alterations and hormesis through mild stress The goal of research on ageing is not to increase human longevity regardless of the consequences but to increase active longevity free from disability and functional dependence

**Brain and Longevity** Caleb E. Finch, Jean-Marie Robine, 2013-12-21 In this third volume on longevity Fondation Ipsen has again collected the most recent results in research on genes and diet in the evolution of human longevity educational level and longevity cognitive impairment and survival at older age and other contributions The preponderance of relatively short compared to long lived organisms suggests that morphogenesis is easier to accomplish than is maintenance of soma whereas the broad range of longevity of organisms demonstrates that maintaining soma for extended periods of time is possible The underlying assumption of disposable soma theory of aging is that the expense of maintaining somatic cells depends on their contribution to the welfare of the germ cells

*Gender and Parenthood* W. Bradford Wilcox,Kathleen Kovner Kline,2013-02-12 The essays in this collection deploy

biological and social scientific perspectives to evaluate the transformative experience of parenthood for today's women and men. They map the similar and distinct roles mothers and fathers play in their children's lives and measure the effect of gendered parenting on child well-being, work and family arrangements and the quality of couples' relationships. Contributors describe what happens to brains and bodies when women become mothers and men become fathers, whether the stakes are the same or different for each sex, why, across history and cultures, women are typically more involved in childcare than men, why some fathers are strongly present in their children's lives while others are not, and how the various commitments men and women make to parenting shape their approaches to paid work and romantic relationships. Considering recent changes in men's and women's familial duties, the growing number of single-parent families, and the impassioned tenor of same-sex marriage debates, this book adds sound scientific and theoretical insight to these issues, constituting a standout resource for those interested in the causes and consequences of contemporary gendered parenthood.
