Sex Single Dog P Touchstone, Philip Cammarata, 1972-05-15 The African Wild Dog Scott Creel, Nancy Marusha Creel, 2019-12-31 With only 5 000 surviving the African wild dog *Lycaon pictus* is one of the world's most endangered large carnivores and one of the most remarkable. This comprehensive portrait of wild dogs incorporates previously scattered information with important new findings from a six year study in Tanzania's Selous Game Reserve Africa's largest protected area. The book emphasizes ecology concentrating on why wild dogs fare poorly in protected areas that maintain healthy populations of lions hyenas or other top carnivores. In addition to conservation issues it covers fascinating aspects of wild dog behavior and social evolution. The Creels use demographic behavioral endocrine and genetic approaches to examine how and why nonbreeding pack mates help breeding pairs raise their litters. They also present the largest data set ever collected on mammalian predator prey interactions and the evolution of cooperative hunting allowing them to account for wild dogs prowess as hunters. By using a large sample size and sophisticated analytical tools the authors step well beyond previous research. Their results include some surprises that will cause even specialists to rethink certain propositions such as the idea that wild dogs are unusually vulnerable to infectious disease. Several findings apply broadly to the management of other protected areas. Of clear appeal to ecologists studying predation and cooperation in any population this book collects and expands a cache of information useful to anyone studying conservation as well as to amateurs intrigued by the once maligned but extraordinary wild dog.

Dog Love Marjorie B. Garber, 1996 Combining literary and historical tidbits with witty social insight *Dog Love* explains everything from why we often admire presidential pets more than their owners to why our attachment to dogs is the ultimate expression of our humanity of photos.

Small Animal Veterinary Psychiatry Sagi Denenberg, 2020-12-03 Problem behaviours are often the result of how an animal thinks and feels genetics and environmental influences. Steering away from just description diagnoses and focusing instead on emotional and cognitive causes this book provides a practical approach to diagnosing treating and managing behaviour pathologies in dogs and cats. Beginning by addressing cases in the first opinion practice this book then considers physical disorders that may lead to or exacerbate abnormal behavior. From there the focus shifts to mental and emotional health from an assessment of normal behavior and giving juveniles an optimal start in life to diagnosing mental and emotional disorders addressing emotions such as anxiety and frustration and how to manage these issues by modifying behavior managing the animal's environment training and when necessary the use of medications. The second half of the book then addresses owner concerns including management problems aggression affective disorder elimination disorder abnormal and repetitive behaviours and ageing related problems.
