Ellis, 2021-11-16 Studies in the Psychology of Sex Volume 2 Havelock Ellis It has been remarked by Professor Wilhelm Ostwald that the problem of homosexuality is a problem left over to us by the Middle Ages which for five hundred years dealt with inverters as it dealt with heretics and witches To regard the matter thus is to emphasize its social and humanitarian interest rather than its biological and psychological significance It is no doubt this human interest of the question of inversion rather than its scientific importance great as the latter is which is mainly responsible for the remarkable activity with which the study of homosexuality has been carried on during recent years The result has been that during the fourteen years that have passed since the last edition of this Study was issued so vast an amount of work has been carried on in this field that the preparation of a new edition of the book has been a long and serious task Nearly every page has been rewritten or enlarged and the Index of Authors consulted has more than doubled in length The original portions of the book have been still more changed sixteen new Histories have been added selected from others in my possession as being varied typical and full These extensive additions to the volume have rendered necessary various omissions Many of the shorter and less instructive Histories contained in earlier editions have been omitted as well as three Appendices which no longer seem of sufficient interest to retain In order to avoid undue increase in the size of this volume already much larger than in the previous editions a new Study of Eonism or sexo esthetic inversion will be inserted in vol v where it will perhaps be at least as much in place as here

A Reader in Sociology; Christian Perspectives Charles P. De Santo, Calvin Redekop, William L. Smith-Hinds, 2001-03-07

Modern Psychoanalysis Judd Marmor, 2018-04-17 Modern Psychoanalysis is a definitive exploration of the expanding horizons of this still controversial approach to and treatment of human behavior In the first paperback release of a work sponsored by the American Academy of Psychoanalysis thirty five authorities explore new approaches to psychoanalytic theory and therapy and examine the growing interaction between this field and the other social and behavioral sciences Modern Psychoanalysis demonstrates how some of the leading figures are bringing their discipline into the mainstream of biological and social through making use of systems theory information processing the constructs of adaptation and learning and other new tools and findings The book is unusually free of the jargon that has separated psychoanalysis in the past from the rest of behavioral and social science Some of the authors and their subjects are Roy Grinker Conceptual Progress in Analysis Jin gen Ruesch Psychoanalysis between Two Cultures Edward Tauber Dreaming and Modern Dream Theory Jules Masserman The Biodynamic Roots of Psychoanalysis Lewis H Wolberg Short term Psychotherapy Stuart M Finch and Albert Cain Psychoanalysis of Children Morris Parloff Analytic Group Psychotherapy Salvador Minuchin The Low Socioeconomic Population Leonard Duhl and Robert Leopold Psychoanalysis and Social Agencies Leo n Edel Psychoanalysis and the Creative Arts Arnold A Rogow Psychiatry History and Political Science and John R Seeley Psychiatry Revolution Reform and Reaction The volume is prepared with the rigor and comprehensiveness that should make the book a standard handbook for psychiatrists psychologists and behavioral scientists And it is written with a sense of

curious readers who may simply be interested in the basic stances of this controversial field of theory and practice It has earned sufficient plaudits to be called a classic in the field Judd Manner s new introduction gives added weight to such claims

Psychiatry in Transition John Lofland, 2021-09-28 When the first edition of *Psychiatry in Transition* came out Dr Gene Usdin wrote that to read Marmor s papers is to read not only psychiatric history but also where that history will be in the next decade That next decade has happened and Marmor s papers remain a beacon of professional endeavor This second edition includes a final chapter on Short Term Dynamic Psychotherapy in which the historical background of brief psychotherapy focusing on the contributions of Freud Ferenczi Rand and Alexander is examined and synthesized Throughout certain basic themes stand out First is the necessity for building upon a solid foundation of scientific thought coupled with a readiness to change theories that do not fit with established facts Second Marmor offers a systems theory to replace simplistic unitary or linear theories Third he presents some common denominators for illuminating the divergent views that characterize contemporary psychiatric theory and practice The whole is linked by a deep concern with betterment of the human predicament Marmor demonstrates that causation in psychiatry can be optimally understood in terms of multiple interacting variables rather than as a response to unitary factors He foreshadows and predicts developments that are now current in contemporary psychiatric practice such as the relationship between neurochemistry and behavior and group therapy with dynamic psychotherapy He also deals with the importance of cultural and socioeconomic factors in individual personality development The work concludes with a series of chapters on interethnic hostility nationalism and urban violence Marmor s work clarifies the nature of the psychoanalytic process by liberating it from obscurantism and jargon This book points the way toward unraveling some of the cognitive dissonance in this area As Leon Eisenberg observed this is an admirable vade mecum of dynamic psychiatry both for residents in training and clinicians in practice

Intersexuality in the Animal Kingdom R. Reinboth, 2012-12-06 When Richard Goldschmidt coined the term intersexuality in 1915 he intended it to apply to normally dioecious species which exhibit some kind of mixture between male and female characters However as knowledge of the bewildering variability present in the sexual organization of members of the animal kingdom has increased the original meaning of the word has changed Today many authors define intersexuality as the presence of both male and female characteristics or of intermediate sexual characteristics in a single individual 2 This more extensive and widely accepted concept justifies the title of our book Among all the anatomical and physiological features of living organisms the reproductive system has a unique importance for the perpetuation of the species Conversely reproductive processes are of little or no account for the viability of the individual Therefore within the framework of general biology reproduction has all too often been looked at solely from the point of view of genetics Lively discussions about genotypic versus phenotypic sex determination long dominated the scientific literature on sexuality in animals this one sided emphasis has tended to obscure many important facets of an organism s ability to reproduce Recent developments in current biological research have brought the classic problem of sex differentiation into focus again and the rapid progress being made in comparative endocrinology has added a new dimension to the study of reproductive biology

Reproduction in Domestic Animals H. H. Cole, P. T. Cupps, 2013-09-24 Reproduction in Domestic Animals Second Edition discusses the chemistry of gonadotropins and biochemistry of the gonadal hormones The book presents the immunological characterization of the gonadotropins and the regulation of the secretion of pituitary gonadotropins by the nervous system The text describes the physiology of reproduction and then discusses the effects of hormones on the development and differentiation of the brain Another topic of interest is the formation of preovulatory follicles The section that follows describes the necessity of quantitative female gametes production The book will provide valuable insights for biologists zoologists students and researchers in the field of animal reproduction
