Technological Advances in Improved and Alternative Sources of Lipids B. S.

Kamel,2012-12-06 Lipids are very important both as components of human nutrition and in applications such as the chemical cosmetics and food industries At present the world oil supply depends on conventional sources and changes in the political and economical map of the world may mean consumer demand will surpass supplies In developed nations consumer preferences due to nutrition and health factors have also created a need to produce new types of oil Many nations lack the power to purchase fats and oil due to shortages in hard currency These nations have a vast number of plants that can be developed and used in extracting oil for home use and for sale as cash crops Also a vast amount of waste from food processing such as tomatoes peaches plums and grapes can be utilized to extract valuable amounts of usable oil Biotechnology genetic engineering enzyme technologies and new processes are all being utilized in lipids research to develop new and modified types of oil for different applications such developments include the high oleic acid sunflower and rapeseed oils The development of cocoa butter substitute is another example This highly practical book reviews the methods of improving oil characteristics from existing sources and the technology and economics of developing underutilized sources It is written for lipid chemists chemical engineers food technologists cosmetologists and nutritionists Graduate and undergraduate students will find value in the data

B S K *Handbook of Industrial Biocatalysis* Ching T. Hou,2005-06-09

Until now no comprehensive handbook on industrial biocatalysis has been available Soliciting chapters on virtually every aspect of biocatalysis from international experts most actively researching the field the Handbook of Industrial Biocatalysis fills this need The handbook is divided into three sections based on types of substrates

T **Riegel's Handbook of**

Industrial Chemistry James A. Kent,2012-12-06 The aim of this book is to present in a single volume an up to date account of the chemistry and chemical engineering which underlie the major areas of the chemical process industry This most recent edition includes several new chapters which comprise important threads in the industry's total fabric These new chapters cover waste minimization safety considerations in chemical plant design and operation emergency response planning and statistical applications in quality control and experimental planning Together with the chapters on chemical industry economics and wastewater treatment they provide a unifying base on which the reader can most effectively apply the information provided in the chapters which describe the various areas of the chemical process industries The ninth edition of this established reference work contains the contributions of some fifty experts from industry government and academe I have been humbled by the breadth and depth of their knowledge and expertise and by the willingness and enthusiasm with

which they shared their knowledge and insights They have without exception been unstinting in their efforts to make their respective chapters as complete and informative as possible within the space available Errors of omission duplication and shortcomings in organization are mine Grateful acknowledgment is made to the editors of technical journals and publishing houses for permission to reproduce illustrations and other materials and to the many industrial concerns which contributed drawings and photographs Comments and criticisms by readers will be welcome

Part One deals with plants, vegetable, herbs, shrubs, such as Hibiscus, Mexican Poppy, Cucumber Squashes, Sesame, etc. Part Two presents unconventional oils found in trees like Balanites aegyptiaca, Annona squamosa, and Catunaregam nilotica, and Part Three deals with new oils found in insects, as in the water melon bug and sorghum bug. This book will be of interest to researchers in oilseed production, research and development, personnel, food scientists, plant breeders, product development, personnel, and government agency personnel involved in the production, transportation, distribution, and processing of oilseeds. Compiles information on unconventional oilseeds and new sources of oil found worldwide, including those from plants, vegetables, herbs, shrubs, trees, and insects. Presents the physico-chemical properties of the seed oils, in addition to their mineral compositions and chemical analyses. Thoroughly explores the chemistry of new oils, their composition, bioactive compounds, such as fatty acids, tocopherols, and sterols. Introduces the composition of new oil sources, their content of minor and bioactive components, and the most used official methods for analysis. **The Lipid Handbook, Second Edition** Frank D. Gunstone, John L. Harwood, Fred B. Padley, 1994-07-21 A great deal of research has been carried out on this important

class of compounds in the last ten years To ensure that scientists are kept up to date the editors of the First Edition of The Lipid Handbook have completely reviewed and extensively revised their highly successful original work The Lipid Handbook Second Edition is an indispensable resource for anyone working with oils fats and related substances *The Journal of Industrial and Engineering Chemistry* ,1918 **Journal of Industrial and Engineering Chemistry** ,1922 **Youth's Companion** ,1919 *The American Perfumer and Essential Oil Review* ,1917 The Youth's Companion Nathaniel Willis,Daniel Sharp Ford,1919 Includes music Animal Fats and Oils Louis Edgar Andés,1920
