Radiation In A Cloudy Atmosphere:

Radiation in a Cloudy Atmosphere E.M. Feigelson, 2013-06-29 Radiative heat transfer is a fundamental factor in the energetics of the terrestrial atmosphere the system consisting of the atmosphere and the underlying layer is heated by the Sun and this heating is compensated on the average by thermal radiation Only over a period of 1-3 days from some specified initial moment can the dynamic processes in the atmosphere be considered to be adiabatic Global dynamic processes of long duration are regulated by the actual influxes of heat one of the main ones being the radiative influx Radiation must be taken into account in long term weather forecasting and when considering the global circulation of the atmosphere the theory of climate etc Thus it is necessary to know the albedo of the system the amount of solar radiation transmitted by the atmosphere the absorptivity of the atmosphere vis a vis solar radiation and also the effective radiation flux the divergence of which represents the radiative cooling or heating All these quantities have to be integrated over the wavelength spectrum of the solar or thermal radiation and they must be ascertained as functions of the determining factors The relationships between the indicated radiation characteristics the optical quantities directly determining them the optically active components of the atmosphere and the meteorological fields will be discussed in this book

Radiative Transfer in a Cloudy Atmosphere R. E. Samuelson, 1965 The equation of radiative transfer in the context of a partially thermally emitting partially anisotropically scattering plane parallel cloudy atmosphere is derived The derivation allows an exact interpretation of the auxiliary quantities in the equation of transfer in terms of the Mie scattering parameters Explicit solutions are given the method of discrete ordinates in accordance with Chandrasekhar's procedure and extended to include thermal emission at infrared wavelengths Solutions of this type restricted to plane parallel layers bounded on both sides by a vacuum and characteristic of phase function for single

scattering independent of optical depth are referred to as solutions to the restricted problem To extend the treatment to the general problem a procedure wherein layers with different scattering properties are combined is developed in terms of the restricted solutions two explicit examples are worked out Such quantities as the angular distribution of outgoing radiation and the net outgoing flux are consequences of these solutions

Aerosol Properties Kirill Ya. Kondratyev, Lev S. Ivlev, Vladimir F. Krapivin, Costas A. Varostos, 2006-08-29 This book provides the first comprehensive analysis of how aerosols form in the atmosphere through in situ processes as well as via transport from the surface dust storms seas spray biogenic emissions forest fires etc Such an analysis has been followed by the consideration of both observation data various field observational experiments and numerical modeling results to assess climate impacts of aerosols bearing in mind that these impacts are the most significant uncertainty in studying natural and anthropogenic causes of climate change

Air Pollution Abstracts ,1971 Remote Sensing of Earth Resources NASA Scientific and Technical Information Facility,1970 Storm and Cloud Dynamics William R. Cotton,George Bryan,Susan C. van den

Heever, 2010-12-21 Storm and Cloud Dynamics focuses on the dynamics of clouds and of precipitating mesoscale meteorological systems. Clouds and precipitating mesoscale systems represent some of the most important and scientifically exciting weather systems in the world. These are the systems that produce torrential rains, severe winds including downburst and tornadoes, hail, thunder and lightning, and major snow storms. Forecasting such storms represents a major challenge since they are too small to be adequately resolved by conventional observing networks and numerical prediction models. Provides a complete treatment of clouds integrating the analysis of air motions with cloud structure, microphysics, and precipitation mechanics. Describes and explains the basic types of clouds and cloud systems that occur in the atmosphere: fog, stratus, stratocumulus, altocumulus, altostratus, cirrus, thunderstorms, tornadoes, waterspouts, orographically induced clouds, mesoscale convection complexes, hurricanes, fronts, and extratropical cyclones. Summarizes the fundamentals, both observational and theoretical, of atmospheric dynamics, thermodynamics, cloud microphysics, and radar meteorology, allowing each type of cloud to be examined in depth. Integrates the latest field observations, numerical model simulations, and theory. Supplies a theoretical treatment suitable for the advanced undergraduate or graduate level as well as post graduate.

Agrometeorology at glance Dr. Deban Kumar Choudhary, 2023-12-13 Weather and climate are common terms to know about the ambient conditions of the environment of any region. Weather is fast changing everywhere in this world. Anthropogenic, i.e., human activities, especially use of fossil fuel, namely coal, petroleum products, and modern artificial chemical, viz. CFC, CH₄, SO₃, N₂O, etc., fueled this climatic change in 21st century. The elements of weather, such as solar radiation, air temperature, atmospheric pressure, wind movement, relative humidity, precipitation, and clouds, are bases to understand the weather and climate of any part of this planet earth. In fact, weather affects equally both the living as well as non-living component of earth. Change in the nature of the physical and living component of earth that is due to land degradation, deforestation, emission of greenhouse gas, industrialization, and urbanization, etc., has marked influence on earth's ecology and environment. As climate affects our each and every aspect of growth and development, and hence understanding environment is of paramount importance for scientific and balanced development of modern human society. Therefore, keeping all these in mind, it is our sincere efforts to mention almost all relevant topics and provide easy and simple material in grasping form for all concerned to understand the complex nature of earth's environment.
