Radical Ionic Systems Anders Lund, Masaru Shiotani, 2012-12-06 It is now more than 20 years since the book Radical Ions edited by Kaiser and Kevan appeared It contained aspects regarding generation identification spin density determination and reactivity of charged molecules with an odd number of electrons New classes of reactive ion radicals have been detected and characterised since then most notably cation radicals of saturated organic compounds Trapping of electrons has been found to occur not only in frozen glasses but also in organic crystals The structure and reactions of anion radicals of saturated compounds have been clarified during the

last 20 years We have asked leading experts in the field to write separate chapters about cation radicals anion radicals and trapped electrons as well as more complex systems of biological or technological interest More attention is paid to recent studies of the ions of saturated compounds than to the older and previously reviewed work on aromatic ions In the case of trapped electrons full coverage is out of the question and focus is on recent efforts to characterise the solvation structure in ordered and disordered systems

Radicals on Surfaces A. Lund, C.J. Rhodes, 2012-12-06 Studies of free radicals on surfaces are of interest for several reasons the spontaneous or stimulated formation of radicals from adsorbed molecules may represent one possible mechanism for heterogeneous catalysis In some cases the radicals are ionic indicating that primary oxidation and reduction reactions occur Radicals can also be used as probes to investigate diffusion processes on catalytic surfaces The

first direct observations were made more than 30 years ago but detailed studies of structure reactions and mobility have only recently become feasible with the advent of powerful spectroscopic techniques to a great extent developed and used by the contributors to this volume This comprehensive review describes new trends in the field Leading experts write about the nature of surface active sites methods to identify them and the radicals formed from adsorbed molecules interacting with the surface The emphasis is on the fundamentals covering thermal photostimulated and radiation induced reactions as well as diffusion processes This provides the necessary background for technological applications This book will be useful to those who are interested in surface chemistry heterogeneous catalysis as well as those who want to study reactive intermediates in chemical reactions It is also of interest to scientists in photo and radiation physics and chemistry

Comprehensive Treatise of Electrochemistry John Bockris, 2013-03-09 It is now time for a comprehensive treatise to look at the whole field of electrochemistry The present treatise was conceived in 1974 and the earliest invitations to authors for contributions were made in 1975 The completion of the early volumes has been delayed by various factors There has been no attempt to make each article emphasize the most recent situation at the expense of an overall statement of the modern view This treatise is not a collection of articles from Recent Advances in Electrochemistry or Modern Aspects of Electrochemistry It is an attempt at making a mature statement about the present position in the vast area of what is best looked at as a new interdisciplinary field Texas A M University J O M Bockris University of Ottawa B E Conway Case Western Reserve University Ernest Yeager M University Texas A Ralph E White Preface to Volume 2 This volume brings together some dozen processes well known to the electro chemist and treats them according to their various degrees of importance The production of hydrogen is one of the more important processes particularly with respect to the prospects of a hydrogen economy No one would doubt however that the most commercially important electrochemical processes at the present time are the production of aluminum and of chlorine Each of these processes has a separate chapter devoted to it

Progress in Electrochemistry of Organic Compounds 1 A. N. Frumkin, 2012-12-06 In the Soviet Union investigations of electrochemical changes in organic substances are being conducted on a comparatively large scale and a large number of specialists are involved This arises to a large extent from the necessity to solve problems in the applied fields e g in the development of new improved methods for the analysis and synthesis of organic compounds or in the work on fuel cells The attainment of substantial successes in this field has been linked inseparably with a deeper understanding of the mechanism and kinetics of electrolytic organic reactions and the utilization of modern research methods based on the latest achievements in instrumentation The theory of organic electrode processes is therefore now developing rapidly However the propagation of information on this work has been relatively slow The Series of reports on Progress in Electrochemistry of Organic Compounds should stimulate systematic treatment and propagation of information in this field of science It is proposed that each volume of the series will be compiled on the same lines as the book *Advances in Electrochemistry of Organic Compounds* published by Nauka in 1966 They will form collections of original review articles on the most important aspects of the subject prepared by competent authorities
