 Alexander Kalcher, Trucks are not only the backbone of logistics they are also extremely fascinating. The technology of the various designs but also the size of these vehicles alone makes them real highlights for technology fans. And for modellers they are worthwhile replica objects that can be equipped with almost unlimited special functions or turned into real gems with light and sound effects. In this book Alexander Kalcher shows you the whole variety of truck modelling. Starting with various kits the book first shows how to build a model out of the box i.e. according to the building instructions. The author discusses special features and gives tips on how to improve a kit with just a few resources. Afterwards he continues with detailed improvements, embellishments and adaptations to personal taste so that models are created that are unique. The wealth of information on the technical background be it mechanics, electronics or remote control technology is also very helpful and makes it easier for beginners to take their first steps in this fascinating hobby.  Roland Büchi, In the first years of the new millennium a revolution took place in remote control technology with 2.4 GHz. After frequencies in the two digit MHz range had been the state of the art for many years, remote controls have conquered the band between 2.4 and 2.48 GHz. In addition to the basics and characteristics of 2.4 GHz radio waves, our author Prof. Dr. Roland Büchi also teaches the practical aspects such as the optimal alignment of antennas in model building, the correct arrangement of components in the model, the programming and configuration of remote controls as well as the avoidance and elimination of interference.
