Scaglione, Ulrich Linsenmaier, Gerd Schueller, 2012-02-21 The term acute abdomen refers to a serious often progressive clinical situation that calls for immediate diagnostic and therapeutic action Today diagnosis via imaging has basically replaced the physical examination in the emergency room and the Radiologist has become of primary importance in this setting However close co operation among the various specialists involved is essential for successful patient management and thus the Radiologist needs to have a full understanding of the imaging modalities and technical skills required as well as appropriate clinical knowledge of the disorder in order to manage the condition This book provides a comprehensive review of the multifaceted etiology pathophysiology and clinical presentation of acute abdominal conditions focusing on the imaging features that are relevant to a timely management approach Numerous high quality images diagrams and easy to read tables are provided

Dynamic Radiology of the Abdomen M.A. Meyers, 2013-06-29 Since the publication of the First Edition of Dynamic Radiology of the Abdomen Normal and Pathologic Anatomy six years ago literally hundreds of scientific articles in the literature have attested to its basic insights in the understanding and clinical diagnosis of a spectrum of intraabdominal diseases Based on radiologic correlations with anatomic and pathologic features the observations have proven readily applicable and highly accurate by ultrasonography and particularly computed tomography CT This edition is designed to provide a comprehensive update of these principles and their clinical applications to include not only plain films and conventional contrast studies but also ultrasonography and CT To accomplish these ends some sections have been completely rewritten and new sections and chapters have been added Over 503 illustrations have been added many of them CT images The atlas of anatomic cross sections in color has been retained and these as well as all CT images are now oriented according to the convention generally adopted shortly after the First Edition was published i.e. as if viewed from below with the subject's right to the viewer's left While a few of the CT illustrations are not of the highest quality the reader will understand that they have been carefully selected for the particular abnormality they demonstrate The references have been updated to cite not only classic articles but selections from the literature through 1981 Particular appreciation is expressed to the following for their cooperation James L Clements Jr M D Jack Farman M D Gary Ghahremani M D

Dynamic Radiology of the Abdomen M.A. Meyers, 2013-04-17 This book provides a systematic application of anatomic and dynamic principles to the practical understanding and diagnosis of intraabdominal diseases Anatomic sections and injection studies form a basis for understanding the characteristic features of many common and uncommon diseases and their spread and localization in the abdomen These relationships and specific criteria provide a rational system for accurate radiologic analysis in plain films conventional contrast studies ultrasonography and computerized transaxial tomography CTT This information leads to the uncovering of clinically deceptive diseases the evaluation of the effects of disease the anticipation of complications and the determination of the appropriate diagnostic and therapeutic approaches The introductory atlas presents full color anatomic cross sections of the abdomen and pelvis complemented by labeled tracings and detailed CTT

sections at corresponding levels. The sections which are approximately 3.8 cm x 1.5 cm in thickness were obtained from fresh cadavers frozen in dry ice for 48 hours in order to maintain the true intimate anatomical relationships. The accompanying text of the atlas stresses normal gross relationships, common variants and the basis of their radiological identification particularly in plain films. The subsequent chapters deal with the diagnosis and the pathways of spread of infection, malignancies and traumatic and inflammatory effusions within the intra and extraperitoneal spaces. Emphasis is placed on the specific localizing features based on the anatomical planes and recesses and the dynamics of extension of disease.
