Recapturing a Future for Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2012-01-30. More than four decades have passed since a human first set foot on the Moon. Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station (ISS). However, of the more than 500 humans who have so far ventured into space, most have gone only as far as near Earth orbit, and none have traveled beyond the orbit of the Moon. Achieving human progress into the solar system has proved far more difficult than imagined in the heady days of the Apollo missions, but the potential rewards remain substantial. During its more than 50-year history, NASA's success in human space exploration has depended on the agency's ability to effectively address a wide range of biomedical, engineering, physical science, and related obstacles—an achievement made possible by NASA's strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery. The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA, which are all the more remarkable given budgetary challenges and changing directions within the agency. In the past decade, however, a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope, with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities. Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research, the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will bring the space community, the U.S. public, and policymakers to an understanding that we are ready for the next significant phase of human space exploration. The goal of this report is to lay out steps and develop a forward-looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight, thereby enabling the U.S. space program to deliver on new exploration initiatives that serve the nation, excite the public, and place the United States again at the forefront of space exploration for the global good.

Psychology of Space Exploration: Contemporary Research in Historical Perspective Douglas A. Vakoch, National Aeronautics and Space Administration, 2011-07-06. This book explores some of the contributions of psychology to yesterday's great space race, today's orbiter, and International Space

Station missions and tomorrow's journeys beyond Earth's orbit. It provides an analysis of the challenges facing future space explorers while at the same time presenting new empirical research on topics ranging from simulation studies of commercial spaceflights to the psychological benefits of viewing Earth from space.

A Constrained Space Exploration Technology Program National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee to Review NASA's Exploration Technology Development Program, 2009-01-29. In January 2004, President George W. Bush announced the Vision for Space Exploration (VSE) which instructed NASA to extend human presence across the solar system starting with a human return to the Moon by the year 2020 in preparation for human exploration of Mars and other destinations among other objectives. As acknowledged in the VSE, significant technology development will be necessary to accomplish the goals it articulates. NASA's Exploration Technology Development Program (ETDP) is designed to support develop and ultimately provide the necessary technologies to meet the goals of the VSE. This book is a review of the ETDP. It is broadly supportive of the intent and goals of the VSE and finds the ETDP is making progress towards the stated goals of technology development. However, the ETDP is operating within significant constraints which limit its ability to successfully accomplish those goals: the still dynamic nature of the Constellation Program requirements, the constraints imposed by a limited budget, the aggressive time scale of early technology deliverables, and the desire to fully employ the NASA workforce.

Psychology of Space Exploration: Contemporary Research in Historical Perspective Douglas A. Vakoch, National Aeronautics and Space Administration, 2012-01-27. Through essays on topics including survival in extreme environments and the multicultural dimensions of exploration, readers will gain an understanding of the psychological challenges that have faced the space program since its earliest days. An engaging read for those interested in space history and psychology alike, this is a highly relevant read as we stand poised on the edge of a new era of spaceflight. Each essay also explicitly addresses the history of the psychology of space exploration.

Engineering Board, Space Studies Board, Board on Health Sciences Policy, Committee on Review of NASA's Bioastronautics Roadmap, 2006-03-16. Extending the spatial and temporal boundaries of human space flight is an important goal for the nation and for the National Aeronautics and Space Administration (NASA). However, human space flight remains an endeavor with substantial risks, and these risks must be identified, managed, and mitigated appropriately to achieve the nation's goals in space. The Bioastronautics Roadmap (BR) is the result of extensive commendable efforts on the part of NASA to prioritize research efforts to meet these challenges. In 2003, NASA asked the Institute of Medicine (IOM) in collaboration with the Division on Engineering and Physical Sciences of the National Academies to conduct a review of the BR. Specifically, NASA

asked the committee to 1 conduct a comprehensive assessment and report of the strengths and weaknesses of the content and processes of the Bioastronautics Roadmap as applied to the missions described in the President's exploration initiative and 2 identify the unique challenges for accomplishing its goals and objectives In September 2004 the committee released its preliminary report to NASA entitled Preliminary Considerations Regarding NASA's Bioastronautics Critical Path Roadmap That document presented the committee's preliminary conclusions about the strengths and weaknesses of the April 2004 version of the BR This report A Risk Reductions Strategy for Human Exploration of Space builds on those preliminary conclusions and provides recommendations to NASA about how to address the issues identified by the committee

Building a Space-Faring Civilization Michael Schmidt A, Marianne Legato J, 2025-02-03 Building a Space Faring Civilization Advancing the Renaissance of Science Medicine and Human Performance in Civilian Spaceflight explores an expanding unique new trajectory for humankind the settlement of space by civilians For the first time in history average humans can contemplate journeys to Earth orbit the Moon and Mars with the idea of space settlement as a plausible reality As the numbers of spacefaring civilians grow medical personnel will be asked to meet their complex needs through an ever expanding discipline space medicine But this will require a rapidly advancing science to address what some are calling the next great age in space This book gathers some of the most accomplished thought leaders in the field of human spaceflight today Collectively they helped build the international space station ISS develop the field of orbital medicine guide the development of commercial orbital platforms plan missions to the Moon and Mars and forge the innovation necessary for the commercial spaceflight industry to thrive today The result is an exceptional source of wisdom experience and insight surrounding the current biomedical technical industrial legal and social implications of what is emerging as a true renaissance period in human history Describes the lessons learned from past explorers from the Renaissance to the present and how they can guide space exploration today Characterizes the risks encountered in the exploration and settlement of different domains of space Surveys the types of medical incidents civilian space travelers are likely to encounter based on professional astronaut reports Summarizes the types of biomedical assessment civilian space travelers will require in order to ready themselves for the dangers of space Explores the types of preparation training and medical countermeasures needed to live and work in space

Systems Medicine For Human Spaceflight Mark J Shelhamer, Erik Antonsen, 2024-03-19 This edited volume makes the case that a systems approach is needed for long term spaceflight missions Due to distance from Earth and the impossibility of resupply or rapid return these flights will entail unprecedented autonomy on the part of the crew This autonomy includes the need for local clinical decision support and other assistance with urgent medical concerns The advantage of a systems approach to medical needs in human spaceflight is that it enables a systematic and repeatable methodology for identifying and developing the individual pieces of the spacecraft systems based on the human system needs that are unique to that problem and environment The book begins by introducing a systems basis

for thinking about humans in space It describes existing models and paradigms of systems medicine as well as the tools and analytical approaches involved A tantalizing peek at preliminary applications of systems medicine in NASA is provided As systems in human spaceflight continue to evolve for the foreseeable future it is argued that a systems approach will help to ensure that the evolution of the relevant sub systems is centered on optimal human system function across the unique spaceflight needs of the developing customer base The discussions on balancing the needs of the mission versus the maintenance of crew health medical risk and liability for commercial spaceflights and the need to anticipate what the next medical issues might be will hopefully leave readers cautiously optimistic about this new frontier of applied science

The Bioethics of Space Exploration Konrad Szocik, 2023 The Bioethics of Space Exploration provides a comprehensive discussion of the possible bioethical issues and challenges that may arise when considering future long term space missions Because of numerous threats within the space environment many consider the concept of radically modifying humans to be a serious and perhaps even necessary option Konrad Szocik presents what types of ethical and bioethical challenges may await participants on commercial scientific and colonizing missions and provides a new perspective into the potential for radical biomedical technologies Space 2069 David Whitehouse, 2020-08-27 It is rare to read something that so closely mixes science fiction with reality but Space 2069 does just that It s an intelligent portrait of where we may be in the next half century BBC Sky at Night Nearing half a century since the last Apollo mission mankind has yet to return to the Moon but that is about to change With NASA s Artemis program scheduled for this decade astronomer David Whitehouse takes a timely look at what the next 50 years of space exploration have in store The thirteenth man and the first woman to walk on the Moon will be the first to explore the lunar south pole the prime site for a future Moon base thanks to its near perpetual sunlight and the presence of nearby ice The first crewed mission to Mars will briefly orbit the red planet in 2039 preparing the way for a future landing mission Surviving the round trip will be the greatest challenge any astronaut has yet faced In the 2050s a lander will descend to the frozen surface of Jupiter s moon Europa and attempt to drill down to its subsurface ocean in search of life Based on real world information up to date scientific findings and a healthy dose of realism Space 2069 is a mind expanding tour of humanity s future in space over the next 50 years **The Oxford Handbook of Expertise** Paul Ward, Jan
