Electrical and Instrumentation Safety for Chemical Processes R.J. Buschart, 2012-12-06 This text is about electrical and instrumentation safety for chemical processes It covers a wide area of electrical and electronic phenomena and how they have and can significantly affect the safety of chemical processes The importance of the subject is well known to anyone involved in the operation of chemical processes Lightning strikes can explode storage tanks shut down electrical power systems and shut down or damage computer and instrument systems Static electricity can ignite flammable materials and damage sensitive electronic process control equipment Electrical power system failures or interruptions can produce unsafe process conditions Chemical processes use flammable and combustible vapors gases or dusts that can be exploded by electrical equipment and wiring Even low energy equipment like flashlights can ignite a flammable vapor Interlock and equipment protection systems can cause safety problems How important is electrical and process control safety A survey on How Safe is Your Plant in the April 1988 issue of Chemical Engineering magazine provided some answers Among the results of this survey of chemical processes it was found that over 800 respondents believed instrumentation and controls shutdown systems equipment interlocks and other protection systems to be the least safe aspect of chemical industries The survey also indicated that complying with OSHA and other regulations process control software security inspections audits and safety training are important safety issues

**Standards and Codes Guideline** Saad Mahir, In the fields of work in industrial areas engineers and project implementers work to find the means to develop the work and complete it at the time indicated in an implementation plan and to avoid delays in the progress of the project for many reasons that we cannot summarize here for its bifurcation and relationship of activities with each other but we mention the most important reason at which the failure to follow the standard specifications of activities construction of the project by engineers or technicians These standards and codes are usually mentioned in their sources in the project documents The deviation from following the standards and codes leads to technical errors and consequently to the re work and addition of unwanted time to the project activity and when errors are repeated due to non compliance with international standards this will result in an accumulation of the unwanted time in the project ultimately leads to deviating the project plan
