In recent years the field of study variously called local indigenous or traditional environmental knowledge TEK has experienced a crisis brought about by the questioning of some of its basic assumptions This has included reassessing notions that scientific methods can accurately elicit and describe TEK or that incorporating it into development projects will improve the physical social or economic well being of marginalized peoples The contributors to this volume argue that to accurately and appropriately describe TEK the historical and political forces that have shaped it as well as people's day to day engagement with the landscape around them must be taken into account TEK thus emerges not as an easily translatable tool for development experts but as a rich and complex element of contemporary lives that should be defined and managed by indigenous and local peoples themselves Peace Settlements and Political Transformation in Divided Societies Adrian Guelke, 2022-10-03

Peace Settlements and Political Transformation in Divided Societies examines what happened to Northern Ireland and South Africa after their miraculous political settlements in the 1990s in which comparison between the two cases played a small but significant role The author extends the story by exploring the connections between these two deeply divided societies during the consolidation of their settlements He shows the ways in which their paths have subsequently diverged in both reality and perception At the outset of the transformation of the two polities the similarities between the two cases tended to be overstated In this context the book explains how the South African case came to be misidentified as an example of consociationalism and the influence that this has continued to exert on comparative studies of power sharing In

the process other aspects of South Africa's political transformation including respect for the constitution and the rule of law have been overlooked and underappreciated In the case of Northern Ireland a missing element in the treatment of its settlement as a model for other deeply divided societies has been the role that external mediation played in the creation and survival of its institutions Northern Ireland's dependence on favourable external circumstances explains in large part why the Good Friday Agreement is now facing a threat to its survival By contrast South Africa's political institutions seem relatively secure despite the vast scale of the country's socio economic problems This book will be of interest to students researchers and scholars of conflict resolution and peace processes comparative politics ethnic politics and democratisation as well as those involved in the governance of deeply divided societies

Unifying

Geography David T. Herbert, John A. Matthews, 2004-08-05 It can be argued that the differences in content and approach between physical and human geography and also within its sub disciplines are often overemphasised The result is that geography is often seen as a diverse and dynamic subject but also as a disorganised and fragmenting one without a focus Unifying Geography focuses on the plural and competing versions of unity that characterise the discipline which give it cohesion and differentiate it from related fields of knowledge Each of the chapters is co authored by both a leading physical and a human geographer Themes identified include those of the traditional core as well as new and developing topics that are based on subject matter concepts methodology theory techniques and applications Through its identification of unifying themes the book will provide students with a meaningful framework through which to understand the nature of the geographical discipline Unifying Geography will give the discipline renewed strength and direction thus improving its status

The Life and Death of Ancient Cities Greg Woolf, 2020 The human race is on a 10 000 year urban adventure Our ancestors wandered the planet or lived scattered in villages yet by the end of this century almost all of us will live in cities But that journey has not been a smooth one and urban civilizations have risen and fallen many times in history The ruins of many of them still enchant us This book tells the story of the rise and fall of ancient cities from the end of the Bronze Age to the beginning of the Middle Ages It is a tale of war and politics pestilence and famine triumph and tragedy by turns both

fabulous and squalid Its focus is on the ancient Mediterranean Greeks and Romans at the centre but Phoenicians and Etruscans Persians Gauls and Egyptians all play a part The story begins with the Greek discovery of much more ancient urban civilizations in Egypt and the Near East and charts the gradual spread of urbanism to the Atlantic and then the North Sea in the centuries that followed The ancient Mediterranean where our story begins was a harsh environment for urbanism So how were cities first created and then sustained for so long in these apparently unpromising surroundings How did they feed themselves where did they find water and building materials and what did they do with their waste and their dead Why in the end did their rulers give up on them And what it was like to inhabit urban worlds so unlike our own cities plunged into darkness every night cities dominated by the temples of the gods cities of farmers cities of slaves cities of soldiers Ultimately the chief characters in the story are the cities themselves Athens and Sparta Persepolis and Carthage Rome and Alexandria cities that formed great families Their story encompasses the history of the generations of people who built and inhabited them whose short lives left behind monuments that have inspired city builders ever since and whose ruins stand as stark reminders to the 21st century of the perils as well as the potential rewards of an urban existence *Thin on the Ground* Steven E. Churchill, 2014-10-06 *Thin on the Ground* Neandertal Biology Archeology and Ecology synthesizes the current knowledge about our sister species the Neandertals combining data from a variety of disciplines to reach a cohesive theory behind Neandertal low population densities and relatively low rate of technological innovation The book highlights and contrasts the differences between Neandertals and early modern humans and explores the morphological physiological and behavioral adaptive solutions which led to the extinction of the Neandertals and the population expansion of modern humans Written by a world recognized expert in physical anthropology *Thin on the Ground* Neandertal Biology Archeology and Ecology will be a must have title for anyone interested in the rise and fall of the Neandertals
