D'Angelo,1993-01-06 *Several Complex Variables and the Geometry of Real Hypersurfaces* covers a wide range of information from basic facts about holomorphic functions of several complex variables through deep results such as subelliptic estimates for the Neumann problem on pseudoconvex domains with a real analytic boundary The book focuses on describing the geometry of a real hypersurface in a complex vector space by understanding its relationship with ambient complex analytic varieties You will learn how to decide whether a real hypersurface contains complex varieties how closely such varieties can contact the hypersurface and why it s important The book concludes with two sets of problems routine problems and difficult problems many of which are unsolved Principal prerequisites for using this book include a thorough understanding of

advanced calculus and standard knowledge of complex analysis in one variable Several Complex Variables and the Geometry of Real Hypersurfaces will be a useful text for advanced graduate students and professionals working in complex analysis

Geometry of Holomorphic Mappings Sergey Pinchuk, Rasul Shafikov, Alexandre Sukhov, 2023-09-14 This monograph explores the problem of boundary regularity and analytic continuation of holomorphic mappings between domains in complex Euclidean spaces Many important methods and techniques in several complex variables have been developed in connection with these questions and the goal of this book is to introduce the reader to some of these approaches and to demonstrate how they can be used in the context of boundary properties of holomorphic maps The authors present substantial results concerning holomorphic mappings in several complex variables with improved and often simplified proofs Emphasis is placed on geometric methods including the Kobayashi metric the Scaling method Segre varieties and the Reflection principle Geometry of Holomorphic Mappings will provide a valuable resource for PhD students in complex analysis and complex geometry it will also be of interest to researchers in these areas as a reference

L2 Approaches in Several Complex Variables Takeo Ohsawa, 2015-09-28 The purpose of this monograph is to present the current status of a rapidly developing part of several complex variables motivated by the applicability of effective results to algebraic geometry and differential geometry Highlighted are the new precise results on the L2 extension of holomorphic functions In Chapter 1 the classical questions of several complex variables motivating the development of this field are reviewed after necessary preparations from the basic notions of those variables and of complex manifolds such as holomorphic functions pseudoconvexity differential forms and cohomology In Chapter 2 the L2 method of solving the $\bar{\partial}$ equation is presented emphasizing its differential geometric aspect In Chapter 3 a refinement of the Oka Cartan theory is given by this method The L2 extension theorem with an optimal constant is included obtained recently by Z Bocklandt and by Q A Guan and X Y Zhou separately In Chapter 4 various results on the Bergman kernel are presented including recent works of Maitani Yamaguchi Berndtsson and Guan Zhou Most of these results are obtained by the L2 method In the last chapter rather specific results are discussed on the existence and classification of certain holomorphic foliations and Levi flat hypersurfaces as their stable sets These are also applications of the L2 method obtained during these 15 years

Analytic and Algebraic Geometry Jeffery D. McNeal, Mircea Mustata, 2010-01-01 Analytic and algebraic geometers often study the same geometric structures but bring different methods to bear on them While this dual approach has been spectacularly successful at solving problems the language differences between algebra and analysis also represent a difficulty for students and researchers in geometry particularly complex geometry The PCMI program was designed to partially address this language gulf by presenting some of the active developments in algebraic and analytic geometry in a form suitable for students on the other side of the analysis algebra language divide One focal point of the summer school was multiplier ideals a subject of wide current interest in both subjects The present volume is based on a series of lectures at the PCMI summer school on analytic and algebraic geometry

The series is designed to give a high level introduction to the advanced techniques behind some recent developments in algebraic and analytic geometry. The lectures contain many illustrative examples, detailed computations and new perspectives on the topics presented in order to enhance access of this material to non specialists.

Publisher's description **The Theory of $H(b)$ Spaces: Volume 2** Emmanuel Fricain, Javad Mashreghi, 2016-10-20 An $H(b)$ space is defined as a collection of analytic functions that are in the image of an operator. The theory of $H(b)$ spaces bridges two classical subjects: complex analysis and operator theory, which makes it both appealing and demanding. Volume 1 of this comprehensive treatment is devoted to the preliminary subjects required to understand the foundation of $H(b)$ spaces, such as Hardy spaces, Fourier analysis, integral representation theorems, Carleson measures, Toeplitz and Hankel operators, various types of shift operators, and Clark measures. Volume 2 focuses on the central theory. Both books are accessible to graduate students as well as researchers; each volume contains numerous exercises and hints, and figures are included throughout to illustrate the theory. Together, these two volumes provide everything the reader needs to understand and appreciate this beautiful branch of mathematics.

Lectures and Surveys on G_2 -Manifolds and Related Topics Spiro Karigiannis, Naichung Conan Leung, Jason D. Lotay, 2020-05-26 This book, one of the first on G_2 manifolds in decades, collects introductory lectures and survey articles largely based on talks given at a workshop held at the Fields Institute in August 2017 as part of the major thematic program on geometric analysis. It provides an accessible introduction to various aspects of the geometry of G_2 manifolds, including the construction of examples as well as the intimate relations with calibrated geometry, Yang-Mills gauge theory, and geometric flows. It also features the inclusion of a survey on the new topological and analytic invariants of G_2 manifolds that have been recently discovered. The first half of the book, consisting of several introductory lectures, is aimed at experienced graduate students or early career researchers in geometry and topology who wish to familiarize themselves with this burgeoning field. The second half, consisting of numerous survey articles, is intended to be useful to both beginners and experts in the field.

In the Tradition of Thurston III Ken'ichi Ohshika, Athanase Papadopoulos, 2024-03-19 William Thurston's ideas have altered the course of twentieth century mathematics, and they continue to have a significant influence on succeeding generations of mathematicians. The purpose of the present volume, and of the other volumes in the same series, is to provide a collection of articles that allows the reader to learn the important aspects of Thurston's heritage. The topics covered in this volume include Kleinian groups, holomorphic motions, earthquakes from the Anti-de Sitter point of view, the Thurston and Weil-Petersson metrics on Teichmüller space, 3-manifolds, geometric structures, dynamics on surfaces, homeomorphism groups of 2-manifolds, and the theory of orbifolds.
