Elearn,2013-06-17 Managers need to be able to make sense of data and to use it selectively to answer key questions Why has quality fallen in the last week Should we subcontract or employ more people What will consumer demand be in the future They need to be able to assess the value of data and to detect what is and what isn't spin The focus is on analysing numbers On their own figures tell us very little To become meaningful they need to be processed and analysed and it is the patterns that emerge from this that provide the information that is needed for decision making The book is arranged in four themes It starts by considering the value of information in organisations and by assessing how effectively the information is used in a management role It then goes on to look at different options for presenting figures so that trends become clearer and patterns simpler to spot As well as making data easier to interpret the techniques the book presents are valuable communication tools that will help the reader use information more effectively with others The last two themes then provide a toolkit of techniques that you can use to investigate situations and help solve problems These include statistical and operational techniques as well as computer tools Like any toolkit the key to using it properly lies in knowing not only what each tool does but when to use it This book will help the reader to develop this ability by applying the methods that are described within a business context *Getting Started with Data Science* Murtaza Haider,2016 Making Sense of Data

Making Sense Of The Senses Tobias Wibble,2022-06-09 Making Sense of the Senses provides an easily understandable and engaging overview of the senses The book allows readers insights into how humans and other animals perceive the world reflecting a level of knowledge similar to that acquired by studying neuroscience at an undergraduate level In order to offer an accessible introduction to the science it uses relatable examples to uncover the history evolution and biological principles of the way we see smell hear taste touch and more Rather than only focusing on the five primary senses you can see on the cover Making Sense of the Senses dives deep into the various methods through which life across the planet surveys the world and guides the reader through the lesser known methods through which we humans interpret our surroundings In this way we come across some amazing abilities that we often forget we possess Humans are nevertheless rather average creatures compared to many sensory specialists So when we compare our relatively modest capabilities to those of other species across the animal kingdom we are forced to yield our anthropocentric sense of supremacy This book will introduce how biological life developed the capacity to detect magnetic fields radioactivity and many more phenomena that until recently were

inaccessible to humans By contextualising and comparing how the senses operate this book covers the sensory systems in a way no popular science book has previously done If you are starting your career in neuroscience or simply want to learn more about the ways our biology guides us through life Making Sense of the Senses will change the way you think about our perception of the world
