## PHOTOGRAPHIC IDENTIFICATION

Below we look at the characteristics researchers use to identify the cetaceans we encounter.

We have a photographer on board all Bremer Canyon expeditions.

### 1 KILLER WHALE (ORCA)

Killer whales (orca) are identified by variations in nicks and notches in the dorsal fin, variations in dorsal fin shape and size and variations in the shape of the white eye patch and the grey marking behind the dorsal fin called the saddle patch.

### 2 HUMPBACK WHALES

Humpback whales are identified by variations in colour patterns of the ventral side of the fluke (tail) and/or of dorsal fin and flank.

### 3 SOUTHERN RIGHT WHALES

Southern Right Whales are identified by the patches of calluses on the head. These are classified, roughened patches of skin. About 5% of the right whale population in Western Australia has an unusual, mottled pale skin coloration. Blue whales have distinctive dorsal fin shapes, fluke markings and notching on their flanks that allow individuals to be identified.

### 4 SPERM WHALES

Sperm whales can be identified by the variations in nicks and notches on the trailing edge of their flukes (tail). Adult males are much larger than females, and can also be distinguished by the presence or absence of calluses on the dorsal hump. A large percentage of females (about 85%) have calluses, whereas males almost never have them.

### 5 FALSE KILLER WHALES AND OTHER DOLPHINS

**Behavior of Marine Animals** Howard E. Winn, Bori L. Olla, 2012-12-06 Four years ago we began soliciting articles for this volume from authors who were engaged in comprehensive research on whales From the outset we decided not to limit the subject matter to behavior but to also include natural history Much of what is known about the behavior of whales arose from studies whose principal aim was not behavior much as it did for other animal groups before behavior was considered a distinct discipline Thus in many of the articles behavior is closely intertwined with natural history and in others is completely overshadowed by a basic natural history approach Our aim was to have the articles contain a review of the literature and include research findings not previously published For all intents and purposes this aim has been realized albeit perhaps not in as balanced a fashion in terms of species or subject matter as was originally planned Nevertheless we believe the articles present a wide range of informative works with a myriad of approaches and techniques represented We are grateful to the contributors for their patience and understanding in awaiting publication which has taken much longer than we originally expected We are also grateful for the assistance of a number of people especially Julie Fischer and Lois Winn for their editorial efforts and Jill Grover Carol Samet and Lois Winn for their help in indexing
