## Planets And Galaxies:

**Planets, Stars, and Galaxies**, 2007 The latest discoveries about our universe to keep readers updated on the latest developments in space *Origins* Steve Eales, 2007-03-12 In the last decade there has been a revolution in observational astronomy which has meant that we are very close to answering three of the four big origin questions of how the planets stars galaxies and the universe itself were formed As recently as 1995 we knew of only one planetary system our own Now we know of over a hundred and this knowledge has helped to reveal how planetary systems form In this same decade new types of telescope have allowed us to penetrate through clouds of interstellar dust to see the first moments in the life of a star and also to see directly not infer what galaxies looked like thirteen billion years ago only a billion years after the Big Bang Because of this new knowledge we now have provisional answers to the second and third origin question The final question is the one we can't yet answer but even here there have been big steps towards an answer Within the last four years astronomers have discovered that the universe is geometrically flat and that its expansion is accelerating fuelled by a mysterious dark energy This revolution in our observational knowledge of the universe including the first precise measurements of its age and matter and energy content has been vital groundwork for new ideas about its origin including the possibility that the universe originated in a larger meta universe Origin Questions describes at an understandable and basically non mathematical level the origin questions and the recent steps that have been taken towards answering them

**Mysteries of Planets, Stars, and Galaxies** Lela Nargi,2025-08-22 Does life exist somewhere other than Earth How many planets are outside our galaxy What happens when stars crash into each other For a long time people believed Earth was the only planet in the galaxy Now we know the universe is much bigger Budding astronomers will learn all about planets stars and galaxies from what s already known to what scientists are still hoping to find out      **Stars, Planets and Galaxies** Sune Engelbrekston,Sue Englebrekston,1983-03 A Ridge Press Book      Mysteries of Planets, Stars, and Galaxies Lela Nargi,2020-08 Does life exist somewhere other than Earth How many planets are outside our galaxy What happens when stars crash into each other For a long time people believed Earth was the only planet in the galaxy Now we know the universe is much bigger Budding astronomers will learn all about planets stars and galaxies from what s already known to

what scientists are still hoping to find out      20 Fun Facts About Galaxies Michael Sabatino,2014-08-01 The Milky Way a galaxy about 100 000 light years across is our cosmic neighborhood Scientists once thought the Milky Way was the only galaxy in the universe but we now know it s just one of billions By studying galaxies and the stars and planets they contain scientists have learned much about the universe and how it formed Readers will be amazed when they see the stunning cosmic images of galaxies Graphic organizers and accessible scientific text help make this volume an informative enjoyable read      **Galaxies** Betsy Rathburn,2019-08-01 On the darkest of nights the white sparkle spanning the sky provides a glimpse at the far reaches of the Milky Way galaxy But there are trillions more just in the observable universe This title allows readers to explore these collections of stars planets and space debris that span across light years of space      *The Future of the Universe* A.J. Meadows,2007-05-27 Many excellent books have been written about the past history of the universe and of the various objects galaxies stars planets to be found in it All the exciting events from the original Big Bang to the appearance of human beings have been carefully recorded Much less has been written about what comes next What will happen to all these galaxies stars and planets in the future And what will happen to us and to any other intelligent life in the u verse It is obviously more dif cult to examine the future than the past but there are ways of doing it Not everything in the universe is the same age so a study of the older objects gives us some idea of what will happen to the younger objects Some things vary in a fairly regular way so you can guess what will happen next For example the number of spots visible on the Sun s surface increases and then decreases again every eleven years on average These ups and downs can be expected to continue for a considerable time in the future Finally theoretical explanations of how things work at present often give some hint of how they will develop in the future One rule of thumb in astronomy though there are plenty of exceptions is that the further away objects are the less we know about them This means that it is often more dif cult to forecast the future for distant objects than for ones nearby
