Rings And Things And A Fine Array Of Twentieth Century Associative Algebra:

   Rings and Things and a Fine Array of Twentieth Century Associative Algebra Carl Clifton Faith,2004 This book surveys more than 125 years of aspects of associative algebras especially ring and module theory It is the first to probe so extensively such a wealth of historical development Moreover the author brings the reader up to date in particular through his report on the subject in the second half of the twentieth century Included in the book are certain categorical properties from theorems of Frobenius and Stickelberger on the primary decomposition of finite Abelian formulations of the latter by Krull Goldman and others Maschke s theorem on the representation theory of finite groups over a field and the fundamental theorems of Wedderburn on the structure of finite dimensional algebras Goldie and others A special feature of the book is the in depth study of rings with chain condition on annihilator ideals pioneered by Noether Artin and Jacobson and refined and extended by many later mathematicians Two of the author s prior works Algebra Rings Modules and Categories I and II Springer Verlag 1973 are devoted to the development of modern associative algebra and ring and module theory Those bibliography of over 1 600 references and is exhaustively indexed In addition to the mathematical survey the author gives candid and descriptive impressions of the last half of the twentieth century in Part II Snapshots of fellow graduate students at the University of Kentucky and at Purdue Faith discusses his Fulbright Nato Postdoctoral at Heidelberg and at the Institute for Advanced Study IAS at Princeton his year as a visiting scholar at Berkeley and the many acquaintances he met there and in subsequent travels in India Europe and most recently Barcelona Comments on the first edition Researchers in algebra should find it both full references as to the origin and development of the theorem I know of no other work in print which does this as thoroughly and as broadly John O Neill University of Detroit at Mercy Part II Snapshots of Mathematicians of my age and younger will relish reading Snapshots James A Huckaba University of Missouri Columbia   **Rings and Things and a Fine Array of Twentieth Century Associative Algebra** Carl Clifton Faith,2014-06-06 This book surveys more than 125 years of aspects of associative algebras especially ring and module theory It is the first to probe so extensively such a wealth of historical development Moreover the author brings the reader up to date in particular through his report on the subject in the second half of the twentieth century Included in the book are certain categorical properties from theorems of Frobenius and Stickelberger on the primary decomposition of finite Abelian formulations of the latter by Krull Goldman and others Maschke s theorem on the representation theory of finite groups over a field and the fundamental theorems of Wedderburn on the structure of finite dimensional algebras Goldie and others A special feature of the book is the in depth study of rings with chain condition on annihilator ideals pioneered by Noether Artin and Jacobson and refined and extended by many later mathematicians Two of the author s prior works Algebra Rings Modules and Categories I and II Springer Verlag 1973 are devoted to the development of modern associative algebra and ring and module theory Those bibliography of over 1 600 references and is exhaustively indexed In addition to the mathematical survey the author gives candid and

descriptive impressions of the last half of the twentieth century in Part II Snapshots of fellow graduate students at the University of Kentucky and at Purdue Faith discusses his Fulbright Nato Postdoctoral at Heidelberg and at the Institute for Advanced Study IAS at Princeton his year as a visiting scholar at Berkeley and the many acquaintances he met there and in subsequent travels in India Europe and most recently Barcelona Comments on the first edition Researchers in algebra should find it both full references as to the origin and development of the theorem I know of no other work in print which does this as thoroughly and as broadly John O Neill University of Detroit at Mercy Part II Snapshots of Mathematicians of my age and younger will relish reading Snapshots James A Huckaba University of Missouri Columbia   **Rings, Modules and Representations** Viet Dung Nguyen,2009 The papers in this volume contain results in active research areas in the theory of rings and modules including non commutative and commutative ring theory module theory representation theory and coding theory   **Handbook of Algebra** ,2003-10-15 Handbook of Algebra   **Advances in Rings and Modules** Sergio R. López-Permouth,Jae Keol Park,S. Tariq Rizvi,Cosmin S. Roman,2018-09-06 This volume dedicated to Bruno J M ller a renowned algebraist is a collection of papers that provide a snapshot of the diversity of themes and applications that interest algebraists today The papers highlight the latest progress in ring and module research and present work done on the frontiers of the topics discussed In addition selected expository articles are included to give algebraists and other mathematicians including graduate students an accessible introduction to areas that may be outside their own expertise   *Quasi-Frobenius Rings* W. K. Nicholson,M. F. Yousif,2003-09-08 A ring is called quasi Frobenius if it is right or left selfinjective and right or left artinian all four combinations are equivalent The study of these rings grew out of the theory of representations of a finite group as a group of matrices over a field and the subject is intimately related to duality the duality from right to left modules induced by the hom functor and the duality related to annihilators The present extent of the theory is vast and this book makes no attempt to be encyclopedic instead it provides an elementary self contained account of the basic facts about these rings at a level allowing researchers and graduate students to gain entry to the field   *Cyclic Modules and the Structure of Rings* S. K. Jain,Ashish K. Srivastava,Askar A. Tuganbaev,2012-09-27 This unique and comprehensive volume provides an up to date account of the literature on the subject of determining the structure of rings over which cyclic modules or proper cyclic modules have a finiteness condition or a homological property The finiteness conditions and homological properties are closely interrelated in the sense that either hypothesis induces the other in some form This is the first book to bring all of this important material on the subject together Over the last 25 years or more numerous mathematicians have investigated rings whose factor rings or factor modules have a finiteness condition or a homological property They made important contributions leading to new directions and questions which are listed at the end of each chapter for the benefit of future researchers There is a wealth of material on the topic which is combined in this book it contains more than 200 references and is not claimed to be exhaustive This book will appeal to graduate students

researchers and professionals in algebra with a knowledge of basic noncommutative ring theory as well as module theory and homological algebra equivalent to a one year graduate course in the theory of rings and modules **Moment Maps, Cobordisms, and Hamiltonian Group Actions** Victor Guillemin,Viktor L. Ginzburg,Yael Karshon,2002 During the last 20 years localization has been one of the dominant themes in the area of equivariant differential geometry Typical results are the Duistermaat Heckman theory the Berline Vergne Atiyah Bott localization theorem in equivariant de Rham theory and the quantization commutes with reduction theorem and its various corollaries To formulate the idea that these theorems are all consequences of a single result involving equivariant cobordisms the authors have developed a cobordism theory that allows the objects to be non compact manifolds A key ingredient in this non compact cobordism is an equivariant geometrical object which they call an abstract moment map This is a natural and important generalization of the notion of a moment map occurring in the theory of Hamiltonian dynamics The book contains a number of appendices that include introductions to proper group actions on manifolds equivariant cohomology Spin mathrm c structures and stable complex structures It is geared toward graduate students and research mathematicians interested in differential geometry It is also suitable for topologists Lie theorists combinatorists and theoretical physicists Prerequisite is some expertise in calculus on manifolds and basic graduate level differential geometry **Global Dynamics, Phase Space Transport, Orbits Homoclinic to Resonances, and Applications** Stephen Wiggins, This monograph which grew out of a series of lectures delivered by Stephen Wiggins at the Fields Institute in early 1993 is concerned with the geometrical viewpoint of the global dynamics of nonlinear dynamical systems With appropriate examples and concise explanations Wiggins unites many different topics into one volume and makes a unique contribution to the field Engineers physicists chemists and mathematicians who work on issues related to the global dynamics of nonlinear dynamical systems will find these lectures very useful **Characters of Connected Lie Groups** L. Pukanszky,1999 This book adds to the great body of research that extends back to A Weil and E P Wigner on the unitary representations of locally compact groups and their characters i e the interplay between classical group theory and modern analysis The groups studied here are the connected Lie groups of general type not necessarily nilpotent or semisimple Final results reflect Kirillov s orbit method in the case of groups that may be non algebraic or non type I the method requires considerable sophistication Methods used range from deep functional analysis the theory of C algebras factors from F J Murray and J von Neumann and measure theory to differential geometry Lie groups and Hamiltonian actions This book presents for the first time a systematic and concise compilation of proofs previously dispersed throughout the literature The result is an impressive example of the deepness of Pukanszky s work **Absolute CM-Periods** Hiroyuki Yoshida,2003 The central theme of this book is an invariant attached to an ideal class of a totally real algebraic number field This invariant provides us a unified understanding of periods of abelian varieties with complex multiplication and the Stark Shintani units This is a new point of view and the book contains many new results related to it To

place these results in proper perspective and to supply tools to attack unsolved problems the author gives systematic expositions of fundamental topics Thus the book treats the multiple gamma function the Stark conjecture Shimura s period symbol the absolute period symbol Eisenstein series on sGL 2 s and a limit formula of Kronecker s type The discussion of each of these topics is enhanced by many examples The majority of the text is written assuming some familiarity with algebraic number theory About thirty problems are included some of which are quite challenging The book is intended for graduate students and researchers working in number theory and automorphic forms *Jacobi Operators and Completely Integrable Nonlinear Lattices* Gerald Teschl,2000 This volume serves as an introduction and reference source on spectral and inverse theory of Jacobi operators and applications of these theories to the Toda and Kac van Moerbeke hierarchy *An Introduction to the Analysis of Paths on a Riemannian Manifold* Daniel W. Stroock,2000 Hoping to make the text more accessible to readers not schooled in the probabalistic tradition Stroock affiliation unspecified emphasizes the geometric over the stochastic analysis of differential manifolds Chapters deconstruct Brownian paths diffusions in Euclidean space intrinsic and extrinsic Riemannian geometry Bocher s identity and the bundle of orthonormal frames The volume humbly concludes with an admission of defeat in regard to recovering the Li Yau basic differential inequality Annotation copyrighted by Book News Inc Portland OR *Classification and Orbit Equivalence Relations* Greg Hjorth,2000 Actions of Polish groups are ubiquitous in mathematics In certain branches of ergodic theory and functional analysis one finds a systematic study of the group of measure preserving transformations and the unitary group In logic the analysis of countable models intertwines with results concerning the actions of the infinite symmetric group This text develops the theory of Polish group actions entirely from scratch ultimately presenting a coherent theory of the resulting orbit equivalence classes that may allow complete classification by invariants of an indicated form The book concludes with a criterion for an orbit equivalence relation classifiable by countable structures considered up to isomorphism This self contained volume offers a complete treatment of this active area of current research and develops a difficult general theory classifying a class of mathematical objects up to some relevant notion of isomorphism or equivalence **Representations of Algebraic Groups** Jens Carsten Jantzen,2003-01-01 Now back in print by the AMS this is a significantly revised edition of a book originally published in 1987 by Academic Press This book gives the reader an introduction to the theory of algebraic representations of reductive algebraic groups To develop appropriate techniques the first part of the book is an introduction to the general theory of representations of algebraic group schemes Here the author describes important basic notions induction functors cohomology quotients Frobenius kernels and reduction mod p among others The second part of the book is devoted to the representation theory of reductive algebraic groups It includes topics such as the description of simple modules vanishing theorems the Borel Bott Weil theorem and Weyl s character formula andSchubert schemes and line bundles on them For this revised edition the author added nearly 150 pages of new material describing some later developments among them Schur

algebras Lusztig s conjecture and Kazhdan Lusztig polynomials tilting modules and representations of quantum groups He also made major revisions to parts of the old text Jantzen s book continues to be the ultimate source of information on representations of algebraic groups in finite characteristics It is suitable forgraduate students and research mathematicians interested in algebraic groups and their representations **Spectral Theory of Non-Self-Adjoint Two-Point Differential Operators** John Locker,2000 Develops the spectral theory of an nth order non self adjoint two point differential operator L in the complex Hilbert space L2 0 1 The differential operator L is determined by an nth order formal differential l and by n linearly independent boundary values B1 Bn Locker first lays the foundations of the spectral theory for closed linear operators and Fredholm operators in Hilbert spaces before developing the spectral theory of the differential operator L The book is a sequel to Functional analysis and two point differential operators 1986 Annotation copyrighted by Book News Inc Portland OR **Locally Solid Riesz Spaces with Applications to Economics** Charalambos D. Aliprantis,Owen Burkinshaw,2025-05-14 Riesz space or a vector lattice is an ordered vector space that is simultaneously a lattice A topological Riesz space also called a locally solid Riesz space is a Riesz space equipped with a linear topology that has a base consisting of solid sets Riesz spaces and ordered vector spaces play an important role in analysis and optimization They also provide the natural framework for any modern theory of integration This monograph is the revised edition of the authors book Locally Solid Riesz Spaces 1978 Academic Press It presents an extensive and detailed study with complete proofs of topological Riesz spaces The book starts with a comprehensive exposition of the algebraic and lattice properties of Riesz spaces and the basic properties of order bounded operators between Riesz spaces Subsequently it introduces and studies locally solid topologies on Riesz spaces the main link between order and topology used in this monograph Special attention is paid to several continuity properties relating the order and topological structures of Riesz spaces the most important of which are the Lebesgue and Fatou properties A new chapter presents some surprising applications of topological Riesz spaces to economics In particular it demonstrates that the existence of economic equilibria and the supportability of optimal allocations by prices in the classical economic models can be proven easily using techniques from the theory of topological Riesz spaces At the end of each chapter there are exercises that complement and supplement the material in the chapter The last chapter of the book presents complete solutions to all exercises Prerequisites are the fundamentals of real analysis measure theory and functional analysis This monograph will be useful to researchers and graduate students in mathematics It will also be an important reference tool to mathematical economists and to all scientists and engineers who use order structures in their research Mirror Symmetry and Algebraic Geometry David A. Cox,Sheldon Katz,1999 Mirror symmetry began when theoretical physicists made some astonishing predictions about rational curves on quintic hypersurfaces in four dimensional projective space Understanding the mathematics behind these predictions has been a substantial challenge This book is the first completely comprehensive monograph on mirror symmetry covering the original observations by the

physicists through the most recent progress made to date Subjects discussed include toric varieties Hodge theory Kahler geometry moduli of stable maps Calabi Yau manifolds quantum cohomology Gromov Witten invariants and the mirror theorem This title features numerous examples worked out in detail an appendix on mathematical physics an exposition of the algebraic theory of Gromov Witten invariants and quantum cohomology and a proof of the mirror theorem for the quintic threefold **Lusternik-Schnirelmann Category** Octavian Cornea,2003 Lusternik Schnirelmann category is like a Picasso painting Looking at category from different perspectives produces completely different impressions of category s beauty and applicability from the Introduction Lusternik Schnirelmann category is a subject with ties to both algebraic topology and dynamical systems The authors take LS category as the central theme and then develop topics in topology and dynamics around it Included are exercises and many examples The book presents the material in a rich expository style The book provides a unified approach to LS category including foundational material on homotopy theoretic aspects the Lusternik Schnirelmann theorem on critical points and more advanced topics such as Hopf invariants the construction of functions with few critical points connections with symplectic geometry the complexity of algorithms and category of 3 manifolds This is the first book to synthesize these topics It takes readers from the very basics of the subject to the state of the art Prerequisites are few two semesters of algebraic topology and perhaps differential topology It is suitable for graduate students and researchers interested **Continuous Cohomology, Discrete Subgroups, and Representations of Reductive Groups** Armand Borel,Nolan R. Wallach,2013-11-21 It has been nearly twenty years since the first edition of this work In the intervening years there has been immense progress in the use of homological algebra to construct admissible representations and in the study of arithmetic groups This second edition is a corrected and expanded version of the original which was an important catalyst in the expansion of the field Besides the fundamental material on cohomology and discrete subgroups present in the first edition this edition also contains expositions of some of the most important developments of the last two decades
