Rise Of Mammals:

Extinction and Radiation J. David Archibald, 2011-03-15 This study identifies the fall of dinosaurs as the factor that allowed mammals to evolve into the dominant tetrapod form. It refutes the single cause impact theory for dinosaur extinction and demonstrates that multiple factors massive volcanic eruptions loss of shallow seas and extraterrestrial impact likely led to their demise. While their avian relatives ultimately survived and thrived terrestrial dinosaurs did not. Taking their place as the dominant land and sea tetrapods were mammals whose radiation was explosive following nonavian dinosaur extinction. The author argues that because of dinosaurs Mesozoic mammals changed relatively slowly for 145 million years compared to the prodigious Cenozoic radiation that followed. Finally out from under the shadow of the giant reptiles Cenozoic mammals evolved into the forms we recognize today in a mere ten million years after dinosaur extinction.

The Rise and Reign of the Mammals Steve Brusatte, 2022-06-07 By the author of the acclaimed bestseller *The Rise and Fall of the Dinosaurs* a brilliant and beautifully told new history of mammals illuminating the lost story of the extraordinary family tree that led to us. New Scientist The Times UK National Bestseller Top 10 Nonfiction of the Year Kirkus Best Science Book of the Year The Times UK. We humans are the inheritors of a dynasty that has reigned over the planet for nearly 66 million years through fiery cataclysm and ice ages the mammals. Our lineage includes saber toothed tigers woolly mammoths armadillos the size of a car cave bears three times the weight of a grizzly clever scurriers that outlasted Tyrannosaurus rex and even other types of humans like Neanderthals. Indeed humankind and many of the beloved fellow mammals we share the planet with today lions whales dogs represent only the few survivors of a sprawling and astonishing family tree that has been pruned by time and mass extinctions. How did we get here. In his acclaimed bestseller *The Rise and Fall of the Dinosaurs* hailed as the ultimate dinosaur biography by Scientific American paleontologist Steve Brusatte enchanted readers with his definitive history of the dinosaurs. Now picking up the narrative in the ashes of the extinction event that doomed T rex and its kind Brusatte explores the remarkable story of the family of animals that inherited the Earth mammals and brilliantly reveals that their story is every bit as fascinating and complex as that of the dinosaurs. Beginning with the earliest days of our lineage some 325 million years ago Brusatte charts how mammals survived the asteroid that claimed the dinosaurs and made the world their own becoming the astonishingly diverse range of animals that dominate today's Earth. Brusatte also brings alive the lost worlds mammals inhabited through time from ice ages to volcanic catastrophes. Entwined in this story is the detective work he and other scientists have done to piece together our understanding using fossil clues and cutting edge technology. A sterling example of scientific storytelling by one of our finest young researchers *The Rise and Reign of the Mammals* illustrates how this incredible history laid the foundation for today's world for us and our future.

In the Beginning Christopher McGowan, 2011-03 The creationists are eager to inflict their particular brand of science upon our children writes Chris McGowan and this is where responsible scientists must draw the line The creationists say that they want only equal time to present their views as a credible alternative to evolutionary theory in the science classroom The problem is though that what the creationists are offering is not science They are selling good old fashioned fundamentalist religion all spruced up with scientific terminology and ideas to look like science As part of their pressure sales technique they allege that if you are not for them you must be against them and therefore against God and Christianity What is clear from reading their literature and attending their debates is that they do not represent mainstream Christianity and that they are as unorthodox in their theology as they are in their science In this lively and controversial book Chris McGowan a vertebrate paleontologist meets the creationists head on and systematically demolishes their arguments with genuine scientific evidence supporting evolutionary theory For the layperson who may be bewildered by the creationist's misinterpretation or even misrepresentation of the facts McGowan provides an easy to follow explanation of evolution that answers many common questions While attacking the creationist's point of view with no holds barred *In the Beginning* also offers a readable and well illustrated introduction to evolution science As a defense against the creationist threat to intellectual freedom and scientific truth this book will attract a wide variety of interested readers
