*Science Under Control* Maurice P. Crosland, Maurice Crosland, 2002-06-20 This book examines French science in the 19th Century under the auspices of the French Academy of Sciences

*Science Under Control The French Academy Of Sciences 1795-1914* M. Crosland, **The Cambridge History of Science: Volume 8, Modern Science in National, Transnational, and Global Context** Hugh Richard Slotten, Ronald L. Numbers, David N. Livingstone, 2020-04-09 This volume in the highly respected Cambridge History of Science series is devoted to exploring the history of modern science using national transnational and global frames of reference Organized by topic and culture its essays by distinguished scholars offer the most comprehensive and up to date nondisciplinary history of modern science currently available Essays are grouped together in separate sections that represent larger regions Europe Africa the Middle East South Asia East and Southeast Asia the United States Canada Australia New Zealand Oceania and Latin America Each of these regional groupings ends with a separate essay reflecting on the analysis in the preceding chapters Intended to provide a balanced and inclusive treatment of the modern world contributors analyze the history of science not only in local national and regional contexts but also with respect to the circulation of knowledge tools methods people and artifacts across national borders Creolised Science Dorit Brixius, 2024-04-04 This rich deeply researched study offers the first comprehensive exploration of cross cultural plant knowledge in eighteenth century Mauritius Using the concept of creolisation the process by which elements of different cultures are brought together to create entangled and evolving new entities Brixius examines the production of knowledge on an island without long established traditions of botany as understood by Europeans Once foreign plants and knowledge arrived in Mauritius they were adapted to new environmental circumstances and a new socio cultural space Brixius explores how French colonists settlers mediators labourers and enslaved people experienced and shaped the island s botanical past centring the contributions of subaltern actors By foregrounding neglected non European actors from both Africa and Asia within a melting pot of cultivation traditions from around the world she presents a truly global history of botanical knowledge Beyond the Contingent Kathleen A. Mulhern, 2011-06-13 In light of the contemporary struggle between science and faith Kathleen Mulhern s timely exploration of late nineteenth century neo Pascalian thought both recovers a lost perspective on the war between science and religion and offers a fruitful angle of study for twenty first century reflection As the science vs religion rancor reached its early fury at the turn of the century many devout French Catholic intellectuals struggled with the increasingly dogmatic spirit in both the Roman Catholic Church and the scientific community The dominant ideology of scientism within the intellectual establishment of the Third Republic 1870 1940 collided with a growing authoritarianism within the Church expressed in the 1893 papal encyclical Providentissimus Physicist Pierre Duhem philosopher Maurice Blondel and priest Lucien Laberthonniere rejected the Roman Catholic Church s Thomistic methodology and sought intellectual inspiration instead in the philosophy of seventeenth century scientist mathematician

philosopher and Christian apologist Blaise Pascal These neo Pascalians offered an alternative to the adversarial relationship between modern culture and orthodox Catholic faith but their ideas came to an abrupt and bitter conclusion when they ran afoul of Church authority The narrative and contribution of the neo Pascalians offers many insights and lessons that could helpfully inform the contemporary debates surrounding the dialogue between science and religion *Utopia's Garden* E. C. Spary, 2010-12-15 The royal Parisian botanical garden the Jardin du Roi was a jewel in the crown of the French Old Regime praised by both rulers and scientific practitioners Yet unlike many such institutions the Jardin not only survived the French Revolution but by 1800 had become the world's leading public establishment of natural history the Muséum d'Histoire Naturelle E C Spary traces the scientific administrative and political strategies that enabled the foundation of the Muséum arguing that agriculture and animal breeding rank alongside classification and collections in explaining why natural history was important for French rulers But the Muséum's success was also a consequence of its employees Revolutionary rhetoric by displaying the natural order they suggested the institution could assist in fashioning a self educating self policing Republican people Natural history was presented as an indispensable source of national prosperity and individual virtue Spary's fascinating account opens a new chapter in the history of France science and the Enlightenment *International Seminar on Nuclear War and Planetary Emergencies* Antonino Zichichi, Richard C. to reshape scientific life in the light of rapidly changing political mores and the growing importance of the press in public life. The scientific journal did not arise as a natural solution to the problem of communicating scientific discoveries. Rather, as Csiszar shows, its dominance was a hard won compromise born of political exigencies, shifting epistemic values, intellectual property debates, and the demands of commerce. Many of the tensions and problems that plague scholarly publishing today are rooted in these tangled beginnings. As we seek to make sense of our own moment of intense experimentation in publishing platforms, peer review, and information curation, Csiszar argues powerfully that a better understanding of the journal's past will be crucial to imagining future forms for the expression and organization of knowledge. **Defeated Flesh**

Bertrand Taithe, 1999. *Defeated Flesh* is a compelling study of the French defeat of 1870 and the socialist uprising of the Commune of Paris, a crucial turning point in the making of modern France. By examining the history of the body and medicine, Taithe shows how the French mobilized for the war effort and how their ultimate defeat had devastating cultural and social consequences that led to the *fin de siècle* spirit. Reinterpreting the siege of Paris, the physical suffering caused by the war, and rationing in an exceptionally harsh period of French history, the author challenges current debates on citizenship, centralism, and modern warfare. Taithe's original approach and the wide range of previously untouched source material he draws upon cast a new light on the social aspirations behind the world's first socialist uprising and on the fears of national decline so common in Western Europe before 1914. This intriguing and highly original study will be of interest to all readers of French history and of European and French culture, as well as to specialists on the history of war and medicine. Before Big Science Mary Jo Nye, 1999. Notable features of the book include an insightful analysis of the parallel trajectories of modern chemistry and physics and the work of scientists such as John Dalton, Michael Faraday, Hermann von Helmholtz, Marie Curie, Ernest Rutherford, Dorothy Hodgkin, and Linus Pauling, who played prominent roles in the development of both disciplines.

**Constructing a Bridge** Eda Kranakis, 1997. A historical look at styles of technological research and design. If it is true, as Tocqueville suggested, that social and class systems shape technology, research, and knowledge, then the effects should be visible both at the individual level and at the level of technical institutions and local environments. That is the central issue addressed in *Constructing a Bridge*, a tale of two cultures that investigates how national traditions shape technological communities and their institutions and become embedded in everyday engineering practice. Eda Kranakis first examines these issues in the work of two suspension bridge designers of the early nineteenth century: the American inventor James Finley and the French engineer Claude Louis Marie Henri Navier. Finley, who was oriented toward the needs of rural frontier communities, designed a bridge that could be easily reproduced and constructed by carpenters and blacksmiths. Navier, whose professional training and career reflected a tradition of monumental architecture and had linked him closely to the Parisian scientific community, designed an elegant, costly, and technically sophisticated structure to be built in an elite district of Paris. Charting the careers of these two technologists and tracing the stories of their bridges, Kranakis reveals how local

environments can shape design goals research practices and design to construction processes Kranakis then offers a broader look at the technological communities and institutions of nineteenth century France and America and at their ties to technological practice She shows how conditions that led to Finley s and Navier s distinct designs also fostered different systems of technical education as well as distinct ideologies and traditions of engineering research The result of this two tiered comparative approach is a reorientation of a historiographic tradition initiated by Tocqueville and explored more recently by Eugene Ferguson John Kasson and others toward a finer grained analysis of institutional and local environments as mediators between national traditions and individual styles of technological research and design *Exploratory*

*Experiments* Friedrich Steinle,2016-09-02 Translated by Alex Levine The nineteenth century was a formative period for electromagnetism and electrodynamics Hans Christian Orsted s groundbreaking discovery of the interaction between electricity and magnetism in 1820 inspired a wave of research led to the science of electrodynamics and resulted in the development of electromagnetic theory Remarkably in response Andre Marie Ampere and Michael Faraday developed two incompatible competing theories Although their approaches and conceptual frameworks were fundamentally different together their work launched a technological revolution laying the foundation for our modern scientific understanding of electricity and one of the most important debates in physics between electrodynamic action at a distance and field theories In this foundational study Friedrich Steinle compares the influential work of Ampere and Faraday to reveal the prominent role of exploratory experimentation in the development of science While this exploratory phase was responsible for decisive conceptual innovations it has yet to be examined in such great detail Focusing on Ampere s and Faraday s research practices reconstructed from previously unknown archival materials including laboratory notes diaries letters and interactions with instrument makers this book considers both the historic and epistemological basis of exploratory experimentation and its importance to scientific development [The Millennium Prize Problems](#) James Carlson,Arthur Jaffe,Andrew

Wiles,2023-09-14 On August 8 1900 at the second International Congress of Mathematicians in Paris David Hilbert delivered his famous lecture in which he described twenty three problems that were to play an influential role in mathematical research A century later on May 24 2000 at a meeting at the Coll ge de France the Clay Mathematics Institute CMI announced the creation of a US 7 million prize fund for the solution of seven important classic problems which have resisted solution The prize fund is divided equally among the seven problems There is no time limit for their solution The Millennium Prize Problems were selected by the founding Scientific Advisory Board of CMI Alain Connes Arthur Jaffe Andrew Wiles and Edward Witten after consulting with other leading mathematicians Their aim was somewhat different than that of Hilbert not to define new challenges but to record some of the most difficult issues with which mathematicians were struggling at the turn of the second millennium to recognize achievement in mathematics of historical dimension to elevate in the consciousness of the general public the fact that in mathematics the frontier is still open and abounds in important unsolved

problems and to emphasize the importance of working towards a solution of the deepest most difficult problems The present volume sets forth the official description of each of the seven problems and the rules governing the prizes It also contains an essay by Jeremy Gray on the history of prize problems in mathematics      *Communicating Science* Alan G. Gross, Joseph E. Harmon, Michael S. Reidy, 2002-04-11 This book describes the development of the scientific article from its modest beginnings to the global phenomenon that it has become today Their analysis of a large sample of texts in French English and German focuses on the changes in the style organization and argumentative structure of scientific communication over time They also speculate on the future currency of the scientific article as it enters the era of the World Wide Web This book is an outstanding resource text in the rhetoric of science and will stand as the definitive study on the topic      *Calvet's Web* L. W. B. Brockliss, 2002-07-04 Calvet's Web is a study of the correspondence network of an Avignon physician in the period 1750 1810 Esprit Calvet was an antiquarian natural historian and bibliophile and was at the centre of a circle of like minded intellectuals from various backgrounds chiefly based in the Rhone valley Laurence Brockliss explores for the first time in detail the intellectual interests and relationships of a representative sample of the French Republic of Letters He traces the destruction of the Republic during the Revolution and its reconstruction in different guise under Napoleon Calvet's Web is an important contribution to our understanding of the social construction of knowledge the history of collecting and the history of the book In addition by examining the circle's attitude to the philosophes and their programme of material and moral progress it offers a new picture of the relationship between the Republic of Letters and the Enlightenment      **Auguste Comte: Volume 2** Mary Pickering, 1993 This volume explores the life and works of Auguste Comte during the last and most controversial part of his career the period from 1842 to 1857      **Making Space for Science** Jon Agar, Crosbie Smith, 2016-01-06 In recent years there has been a growing recognition that a mature analysis of scientific and technological activity requires an understanding of its spatial contexts Without these contexts indeed scientific practice as such is scarcely conceivable Making Space for Science brings together contributors with diverse interests in the history sociology and cultural studies of science and technology since the Renaissance The editors aim to provide a series of studies drawn from the history of science and engineering from sociology and sociology and science from literature and science and from architecture and design history which examine the spatial foundations of the sciences from a number of complementary perspectives      The Science of Energy Crosbie Smith, 1998 Although we take it for granted today the concept of energy transformed nineteenth century physics In The Science of Energy Crosbie Smith shows how a North British group of scientists and engineers including James Joule James Clerk Maxwell William and James Thomson Fleeming Jenkin and P G Tait developed energy physics to solve practical problems encountered by Scottish shipbuilders and marine engineers to counter biblical revivalism and evolutionary materialism and to rapidly enhance their own scientific credibility Replacing the language and concepts of classical mechanics with terms such as actual and potential energy the North British group

conducted their revolution in physics so astutely and vigorously that the concept of energy a valuable commodity in the early days of industrialization became their intellectual property Smith skillfully places this revolution in its scientific and cultural context exploring the actual creation of scientific knowledge during one of the most significant episodes in the history of physics

**Auguste Comte: Volume 3** Mary Pickering, 2009-09-14 This volume continues to explore the life and works of Auguste Comte during his so called second career It covers the period from the coup d tat of Louis Napoleon in late 1851 to Comte s death in 1857 During these early years of the Second Empire Comte became increasingly conservative and anxious to control his disciples This study offers the first study of the tensions within his movement Focusing on his second masterpiece the *Syst me de politique positive* and other important books such as the *Synth se subjective* Mary Pickering not only sheds light on Comte s intellectual development but also traces the dissemination of positivism and the Religion of Humanity throughout many parts of the world

*Creatures of Reason* Stephen Case, 2024-11-05 In his lifetime John Herschel was Britain s best known natural philosopher a world celebrity and arguably the first modern scientist of the generation in which the term itself was invented The polymath son of William Herschel discoverer of Uranus and constructor of the world s largest telescopes Herschel took highest honors as a student at Cambridge conducted groundbreaking work in chemistry and optics helped establish a mathematical revolution extended his father s astronomical surveys to the entire sky and wrote the popular texts by which a generation of readers learned what it meant to do science Along the way Herschel gave to natural philosophy the contours of modern science defining scientific theories as creatures of reason rather than of sense His creatures of reason could also refer to a new type of scientific practitioner the natural philosopher beginning to transition into the modern scientist With this book Stephen Case encompasses Herschel s impact on mathematics chemistry geology and optics as well as the organization of science and its relation to government society and culture revealing Herschel s transformation of the practice of science itself Drawing on his unpublished manuscripts correspondence and notebooks from archives in London Cambridge and Austin this book contributes significantly to our understanding of the early life and career of the nineteenth century s most influential natural philosopher

## Science Under Control The French Academy Of Sciences 1795 1914 Introduction

In the digital age, access to information has become easier than ever before. The ability to download Science Under Control The French Academy Of Sciences 1795 1914 has revolutionized the way we consume written content. Whether you are a student looking for course material, an avid reader searching for your next favorite book, or a professional seeking research papers, the option to download Science Under Control The French Academy Of Sciences 1795 1914 has opened up a world of possibilities. Downloading Science Under Control The French Academy Of Sciences 1795 1914 provides numerous advantages over physical copies of books and documents. Firstly, it is incredibly convenient. Gone are the days of carrying around heavy textbooks or bulky folders filled with papers. With the click of a button, you can gain immediate access to valuable resources on any device. This convenience allows for efficient studying, researching, and reading on the go. Moreover, the cost-effective nature of downloading Science Under Control The French Academy Of Sciences 1795 1914 has democratized knowledge. Traditional books and academic journals can be expensive, making it difficult for individuals with limited financial resources to access information. By offering free PDF downloads, publishers and authors are enabling a wider audience to benefit from their work. This inclusivity promotes equal opportunities for learning and personal growth. There are numerous websites and platforms where individuals can download Science Under Control The French Academy Of Sciences 1795 1914. These websites range from academic databases offering research papers and journals to online libraries with an expansive collection of books from various genres. Many authors and publishers also upload their work to specific websites, granting readers access to their content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Science Under Control The French Academy Of Sciences 1795 1914. Some websites may offer pirated or illegally obtained copies of copyrighted material. Engaging in such activities not only violates copyright laws but also undermines the efforts of authors, publishers, and researchers. To ensure ethical downloading, it is advisable to utilize reputable websites that prioritize the legal distribution of content. When downloading Science Under Control The French Academy Of Sciences 1795 1914, users should also consider the potential security risks associated with online platforms. Malicious actors may exploit vulnerabilities in unprotected websites to distribute malware or steal personal

information. To protect themselves, individuals should ensure their devices have reliable antivirus software installed and validate the legitimacy of the websites they are downloading from. In conclusion, the ability to download Science Under Control The French Academy Of Sciences 1795 1914 has transformed the way we access information. With the convenience, cost-effectiveness, and accessibility it offers, free PDF downloads have become a popular choice for students, researchers, and book lovers worldwide. However, it is crucial to engage in ethical downloading practices and prioritize personal security when utilizing online platforms. By doing so, individuals can make the most of the vast array of free PDF resources available and embark on a journey of continuous learning and intellectual growth.
