Science Under Siege The Politicians War On Nature And Truth:

Science Under Siege Todd Wilkinson, 1998 Exposes how entrenched political interests beholden to industry lobbyists are waging an all out war to weaken key environmental laws and gut regulatory agencies and how deals are made giving private industry a profit at the public s expense Jacket Science under siege Peter Banks, Daniel Lunney, Chris Dickman, 2012-11-01 On Saturday 29 November 2008 the Royal Zoological Society of NSW held a forum with the theme of Science under siege As the RZS is a zoological society zoology under threat became the secondary theme and the basis for selecting speakers This book records that forum with the papers developed for this book as the written word from the spoken presentations Papers that were presented as posters are included as are the edited plenary sessions which featured questions from the floor with answers and comments encouraged from anyone in the forum We were delighted that Mark Horstman from ABC Catalyst was willing to replace his peripatetic colleague Paul Willis who was nonetheless very happy to write the foreword There is a place for such skilled science communicators we need more of them and scientists at the lab bench or in the field or exploring computer models or those that have now taken a job in the policy world need to stay in touch with them Some might say that the title Science under siege seems a bit extreme but we invite you to examine the evidence as presented in this book What follows is an edited version of the introductory material that advertised the forum The title looks dramatic but if you ask yourself is anything killing the science in your area of interest you might be surprised that you come up with a point or two Then ask a wider set of questions such as are there any pressures that preclude people from doing good zoology do either political budgetary constraints impact on your field is science in the media a subject that influences the outcome of your work are there economic impediments to careers in zoology is the education mix in Australia right for this new century are the best researchers becoming full time administrators or the converse the poor researchers becoming the administrators can you place the Australian situation in an international context are there reduced opportunities for human interactions with the natural world is the virtual world killing reality and what are your predictions of the future To deal with such issues the Royal Zoological Society of NSW has structured the day to emphasize a range of themes beginning with identifying the issues including those that are persistent and those that are emerging and encompassing palpable hits to science Direct and indirect hits to science include such matters as the withdrawal of funding subversion of science death by 1000 cuts redirection of funding to fashion issues and using the name of science to justify things that are really not justifiable The name of science is being dragged down We need to confront the ever present problem of ignoring the scientifically accurate for the politically correct This raises such questions as to whether basic skills in biology are not being acquired because of public concern based on extreme animal rights propaganda Good science is not optional but what can be done if you are under siege The answers include understanding the philosophy of science the legal perspective and asking what scientists are or should be doing Audience participation will be a central part of this forum The

plenary sessions will address questions raised by the speakers and the posters and debate issues and consider options for future directions It is widely known that it is hard to pull a major paper together on this theme but so many scientists know of at least one matter that they would like to draw to public attention So short contributions are included Listen to the speakers present some overarching themes or compelling case studies contribute to the debate on the day then examine your stance on a variety of these subjects to see whether the day changes your view of this often cryptic aspect of zoology As editors we wish to acknowledge the skills of the referees all papers were refereed by two peers and the patience of the authors for what has been a long gap between the date of the forum and this publication By the end of 2008 the Royal Zoological Society of NSW along with everyone else was caught by the GFC Global Financial Crisis and we simply had to extend the length of the queue for publication We also reassessed our mode of publication The Council of the Society voted to publish this production as an ebook as well as a short print run for formal library deposit and other essential matters The ebook is open access to enhance the reach of the papers and the ideas At the same time the Royal Zoological Society of NSW signed a contract for a more international mode of access of the publications of the Society and papers are now available via Metapress <http://rzsnsw.metapress.com> Science remains under siege in our view and now we have been alerted to the range of issues it becomes easier to spot the small irritating closing of options that collectively amount to a denial of science and its relegation to an optional way of looking at the world During production of this book this matter became obvious on a number of fronts which led us to invite the paper by Rosie Cooney and colleagues to defend their science of kangaroo conservation and commercial harvesting from an attack on the science We also saw that this issue of science under siege needs more airing and the Royal Zoological Society of NSW is planning its forum for the end of 2012 to take up another strand of this theme by capitalizing on the lifelong insights of scientists under the rubric of grumpy scientists an ecological conscience of a nation This idea in fact derives directly from the suggestions in the plenary sessions by Nick Holmes and Charley Krebs We are also concerned for young scientists with science under siege manifesting often in a failure to create permanent careers for science graduates that advance science itself and zoology in particular from flourishing and identifying problems and finding solutions If we want to conserve the native fauna of Australia then Australian zoologists will have to be key team members We contend that to put science under siege and zoology under threat we not only further imperil our native wildlife but also the careers of the small band of specialists that can see the issues find the problems implement solutions and evaluate the outcomes In short science under siege is not a light matter and no one in this forum thought so Read on form an opinion and speak up and publish your thoughts your examples and your solutions

Science and Politics Brent S. Steel, 2014-04-21 Recent partisan squabbles over science in the news are indicative of a larger tendency for scientific research and practice to get entangled in major ideological divisions in the public arena This politicization of science is deepened by the key role government funding plays in scientific research and development the market leading position of U S based science and technology firms and

controversial U S exports such as genetically modified foods or hormone injected livestock This groundbreaking one volume A to Z reference features 120 150 entries that explore the nexus of politics and science both in the United States and in U S interactions with other nations The essays each by experts in their fields examine Health environmental and social cultural issues relating to science and politics Concerns relating to government regulation and its impact on the practice of science Key historical and contemporary events that have shaped our contemporary view of how science and politics intersect Science and Politics An A to Z Guide to Issues and Controversies is a must have resource for researchers and students who seek to deepen their understanding of the connection between science and politics **Science Under Siege** Todd

Wilkinson,1998 Exposes how entrenched political interests beholden to industry lobbyists are waging an all out war to weaken key environmental laws and gut regulatory agencies and how deals are made giving private industry a profit at the public s expense Jacket The Solution is You! Laurie David,2006 Environmental activist Laurie David describes her own efforts to inform the American people about global warming and how it effects the planet Defending Our Wildlife

Heritage Terry Grosz,2001 The author a special agent for the U S Fish and Wildlife Service discusses his activities investigating the smuggling of wildlife illegal commercialization of wildlife illegal take of wildlife and illegal commercialization of the parts and products of wildlife *Nature and Bureaucracy* David Jenkins,2022-09-08 This book questions how bureaucracies conceive of and consequently interact with nature and suggests that our managed public landscapes are neither entirely managed nor entirely wild and offers several warnings about bureaucracies and bureaucratic mentality One prominent challenge facing scientists policymakers environmental activists and environmentally concerned citizens is to recognize that human influence in the natural world is pervasive and has a long history How we act or choose not to act today will continue to determine the future of the natural world Western style management of nature mediated by economic rationality and state bureaucracies may not be the best strategy to maintain environmental integrity The question is what kinds of human influence conceived of in the widest possible sense will produce ideal environments for future generations The related question is who gets to choose The author approaches the problem of analyzing the mutual influence of human and natural systems from two perspectives as an objective scholar investigating bureaucracies and natural systems from the outside and over the last decade as an inside practitioner working in various roles in federal land management agencies developing policies and regulations involved in the control of natural systems This book will be of great interest to students and scholars of natural resource management policy and politics and professionals working in environmental management roles as well as policymakers involved in public policy and administration **Explorations in Ecocriticism**

Paul Lindholdt,2015-04-09 A chief innovation of Explorations in Ecocriticism is to push ecological criticism beyond its focus on literary studies to engage with other arts and culture One chapter closely examines the pictures commissioned by the U S Bureau of Reclamation to valorize its big dam projects Previously no one has written about the large art collection that

toured the nation under the auspices of the Smithsonian in the early 1970s when the Bureau of Reclamation was under fire and new environmental regulations were becoming law Another chapter *An Iconography of Sabotage* previously published in France as part of a Paris symposium looks at the pictorial dimension of saboteurs throughout American history with a special emphasis on the IWW and Earth First The book draws extensively on the social sciences Ecology and environment are treated too often as technical topics that go over the heads of lay readers Many Americans care about air and water quality the extinction of species and the unfortunate politicization of science But they also find the discourse daunting the details exceedingly complex By leavening such heavy subjects with current events *Explorations in Ecocriticism* makes environmental issues accessible to lay readers and offers routes to sustainability in the United States today

Do (Not) Feed the Bears
 Alice Wondrak Biel, 2006-03-16 It was a familiar sight at Yellowstone National Park traffic backed up for miles as visitors fed bears from their cars It may have been against the rules but park officials were willing to turn a blind eye if it kept the public happy But bear feeding eventually became too widespread and dangerous to everyone including the bears for the National Park Service NPS to allow it any longer As one of the park's most beloved and enduring symbols the Yellowstone bears have long been a flashpoint for controversy Alice Wondrak Biel traces the evolution of their complex relationship with humans from the creation of the first staged wildlife viewing areas to the present and situates that relationship within the broader context of American cultural history Early on park bears were largely thought of as performers or surrogate pets and were routinely fed handouts from cars as well as hotel garbage dumped at park sanctioned lunch counters for bears But as these activities led to ever greater numbers of tourist injuries and of bears killed as a result and as ideas about conservation and the NPS mission changed the agency refashioned the bear's image from cute circus performer to dangerous wild animal and eventually to keystone inhabitant of a fragile ecosystem Drawing on the history of recorded interactions with bears and providing telling photographs depicting the evolving bear human relationship Biel traces the reaction of park visitors to the NPS's efforts from warnings by Yogi Bear which few tourists took seriously to the increasing promotion of key ecological issues and concerns Ultimately as the rules were enforced and tourist behavior dramatically shifted the bears returned to a more natural state of existence Biel's entertaining and informative account tracks this gradual renaturalization while also providing a cautionary tale about the need for careful negotiation at the complex nexus of tourists bears and all things wild

Forum for Applied Research and Public Policy, 2000 *Herding Scientists* Andrew B. Whitford, 2022-05-12 When politicians reshape public health agencies scientists resist changes and if possible leave Those shifts make it harder for agencies to fight future public health threats This Element focuses on the tension between scientists and managerial control in the policy process both conceptually and empirically It centers on a failed attempt to reorganize the United States Centers for Disease Control and Prevention Because many of the gains in longevity and health quality result from the work of public health agencies public health scientists and practitioners are the frontline producers of public health

Endangered:

Biodiversity on the Brink (Volume 2 of 2) (Large Print 16pt) , Between Two Fires Stephen J. Pyne, 2015-10-15 From a fire policy of prevention at all costs to today's restored burning *Between Two Fires* is America's history channeled through the story of wildland fire management Stephen J Pyne tells of a fire revolution that began in the 1960s as a reaction to simple suppression and single agency hegemony and then matured into more enlightened programs of fire management It describes the counterrevolution of the 1980s that stalled the movement the revival of reform after 1994 and the fire scene that has evolved since then Pyne is uniquely qualified to tell America's fire story The author of more than a score of books he has told fire's history in the United States Australia Canada Europe and the Earth overall In his earlier life he spent fifteen seasons with the North Rim Longshots at Grand Canyon National Park In *Between Two Fires* Pyne recounts how after the Great Fires of 1910 a policy of fire suppression spread from America's founding corps of foresters into a national policy that manifested itself as a costly all out war on fire After fifty years of attempted fire suppression a revolution in thinking led to a more pluralistic strategy for fire's restoration The revolution succeeded in displacing suppression as a sole strategy but it has failed to fully integrate fire and land management and has fallen short of its goals Today the nation's backcountry and increasingly its exurban fringe are threatened by larger and more damaging burns fire agencies are scrambling for funds firefighters continue to die and the country seems unable to come to grips with the fundamentals behind a rising tide of megafires Pyne has once again constructed a history of record that will shape our next century of fire management *Between Two Fires* is a story of ideas institutions and fires It's America's story told through the nation's flames

The American West at Risk Howard G. Wilshire, Jane E. Nielson, Richard W. Hazlett, 2008-06-05 *The American West at Risk* summarizes the dominant human generated environmental challenges in the 11 contiguous arid western United States America's legendary even mythical frontier When discovered by European explorers and later settlers the west boasted rich soils bountiful fisheries immense dense forests sparkling streams untapped ore deposits and oil bonanzas It now faces depletion of many of these resources and potentially serious threats to its few renewable resources The importance of this story is that preserving lands has a central role for protecting air and water quality and water supplies and all support a healthy living environment The idea that all life on earth is connected in a great chain of being and that all life is connected to the physical earth in many obvious and subtle ways is not some new age fad it is scientifically demonstrable An understanding of earth processes and the significance of their biological connections is critical in shaping societal values so that national land use policies will conserve the earth and avoid the worst impacts of natural processes These connections inevitably lead science into the murkier realms of political controversy and bureaucratic stasis Most of the chapters in *The American West at Risk* focus on a human land use or activity that depletes resources and degrades environmental integrity of this resource rich but tender and slow to heal western U S The activities include forest clearing for many purposes farming and grazing mining for aggregate metals and other materials energy extraction and use military training and weapons manufacturing and testing road and

utility transmission corridors recreation urbanization and disposing of the wastes generated by everything that we do We focus on how our land degrading activities are connected to natural earth processes which act to accelerate and spread the damages we inflict on the land Visit www.theamericanwestatrisk.com to learn more about the book and its authors

National Parks, 1999-05 The flagship publication of the National Parks Conservation Association National Parks Magazine circ 340 000 fosters an appreciation of the natural and historic treasures found in the national parks educates readers about the need to preserve those resources and illustrates how member contributions drive our organization's park protection efforts National Parks Magazine uses images and language to convey our country's history and natural landscapes from Acadia to Zion from Denali to the Everglades and the 387 other park units in between *Ecocomposition* Christian R. Weisser, Sidney I. Dobrin, 2012-02-01 *Ecocomposition* examines current trends in universities toward more environmentally sound work explores the intersections between composition research that is discourse studies and ecostudies and offers possible pedagogies for the composition classroom Never before have the intersections between ecotheory and composition studies in theory and pedagogy been addressed in this much depth or detail As universities become increasingly concerned with issues of the environment within academic disciplines across the spectrum this book brings together a diverse group of prominent voices to discuss the development of ecocomposition and its possibilities and to argue for a greening of composition studies through which to engage the world in which we live *The Future of the Wild* Jonathan S. Adams, 2006 In *The Future of the Wild* conservationist Jonathan S Adams uses stories to show us how to think big Only by saving large tracts of land and the wildlife corridors that connect them can we hope to save the widest variety of species in any ecosystem And only by saving whole ecosystems including human communities can we hope to make significant strides in conservation

BOOK JACKET **The Nature Conservancy Magazine**, 2004 *National Parks*, 1999-11 The flagship publication of the National Parks Conservation Association National Parks Magazine circ 340 000 fosters an appreciation of the natural and historic treasures found in the national parks educates readers about the need to preserve those resources and illustrates how member contributions drive our organization's park protection efforts National Parks Magazine uses images and language to convey our country's history and natural landscapes from Acadia to Zion from Denali to the Everglades and the 387 other park units in between **The Better to Eat You With** Joel Berger, 2009-11-15 At dawn on a brutally cold January morning Joel Berger crouched in the icy grandeur of the Teton Range It had been three years since wolves were reintroduced to Yellowstone after a sixty year absence and members of a wolf pack were approaching a herd of elk To Berger's utter shock the elk ignored the wolves as they went in for the kill The brutal attack that followed swift and bloody led Berger to hypothesize that after only six decades the elk had forgotten to fear a species that had survived by eating them for hundreds of millennia Berger's fieldwork that frigid day raised important questions that would require years of travel and research to answer Can naive animals avoid extinction when they encounter reintroduced carnivores To what extent is fear culturally

transmitted And how can a better understanding of current predator prey behavior help demystify past extinctions and inform future conservation The Better to Eat You With is the chronicle of Berger s search for answers From Yellowstone s elk and wolves to rhinos living with African lions and moose coexisting with tigers and bears in Asia Berger tracks cultures of fear in animals across continents and climates engaging readers with a stimulating combination of natural history personal experience and conservation Whether battling bureaucracy in the statehouse or fighting subzero wind chills in the field Berger puts himself in the middle of the action The Better to Eat You With invites readers to join him there The thrilling tales he tells reveal a great deal not only about survival in the animal kingdom but also the process of doing science in foreboding conditions and hostile environments
