

La tectonique des plaques

Il s'agit d'une théorie qui explique que les 7 grandes plaques et plusieurs petites tectoniques se déplacent les unes par rapport aux autres, sous l'effet des mouvements de convection du manteau.

Certaines zones plaques s'affaiblissent, les autres (les rifts) sont créés, par impact des plaques voisines. C'est ainsi que les océans prennent naissance ou

Les particularités du rift

La naissance d'un océan débute par la rupture d'une croûte, puis se prolonge en la creusant plus les années vont passant.

disparaissent. On parle alors de **subduction océanique**.

L'assourdissement de la croûte océanique est compensé par une élévation de la croûte adjacente, qui se traduit par l'existence d'une **chaîne de volcans**, appelé la **chaîne médiane** plonge sous une plaque continentale et s'enfonce vers le manteau, se fondant à mesure qu'elle se enfonce.

Quand la croûte océanique d'une plaque s'affaiblit au centre de grandes continents, la croûte est épaissie, et peut être déformée à cause de **volcans**. Ces terres émergées, les deux plaques se frottent, se cassent, et se soulèvent, poussant les rochers vers le haut : cela explique la création de chaînes de montagnes.

New Serial Titles, 1985 **Water Resources in Algeria - Part I** Abdelazim M. Negm, Abdelkader Bouderbala, Haroun Chenchouni, Damià Barceló, 2020-10-23 This book reviews the latest information on the assessment of surface and groundwater resources in Algeria. The authors cover a large diversity of topics including the status and assessment of water resources, impacts of pesticides, soil droughts, analysis of flood characteristics, hydrogeological investigations and modeling applications and evapotranspiration. Special attention is given to the impacts of climate changes on water resources. The assessment methods present in this book can be used or adapted to study other regions of North Africa, Middle East and or in the Mediterranean with similar climate conditions as Algeria. This book and the companion volume *Water Resources in Algeria Part II: Water Quality, Treatment, Protection and Development* will appeal to engineers, researchers, graduate students and policymakers interested in the field of groundwater and surface water assessment. **Isis** George Sarton, 1914. Brief table of contents of vols I-XX in v. 21 p. 502-618. **New Frontiers in Tectonic Research** Uri Schattner, 2011-08-09. Ocean closure involves a variety of converging tectonic processes that reshape shrinking basins, their adjacent margins and the entire earth underneath. Following continental breakup, margin formation and sediment accumulation, tectonics normally relaxes and the margins become passive for millions of years. However, when final convergence is at the gate, the passive days of any ocean and its margins are over or soon will be. The fate of the Mediterranean and Persian Gulf is seemingly known beforehand as they are nestled in the midst of Africa Arabia plate convergence with Eurasia. Over millions of years through the Cenozoic era, they progressively shriveled, leaving only a glimpse of the Tethys Ocean. Eventually, the basins will adhere to the Alpine-Himalaya orogen and dissipate. This book focuses on a unique stage in the ocean closure process when significant convergence already induced major deformations, yet the inter-plate basins and margins still record the geological history.
