Scientific And Technical Means Of Distinguishing Between Natural And Other Outbreaks Of Disease Hc 2001:

Scientific and Technical Means of Distinguishing Between Natural and Other Outbreaks of Disease Malcolm R. Dando, G.S. Pearson, Bohumir Kriz, 2001-05-31 There is increasing concern over the possible use of biological weapons. If they are used, an attack will manifest as a disease outbreak among humans, animals, or plants. It is thus important to be able to distinguish between natural disease outbreaks and the result of such an attack. The book discusses the scientific and technical means available to investigate this question and then goes on to consider the agents of concern. The book concludes with a look forward to future developments. Biological and Chemical Terrorism Raymond S. Lavezzi, Conrad E. Johanson, 2017-10-03 Sudden Infant Death Syndrome SIDS is the leading cause of death among infants in the first year of age The more known definition of SIDS is the sudden unexpected death of an infant less than 1 year of age with onset of the fatal episode apparently occurring during sleep that remains unexplained after a thorough investigation including performance of a complete autopsy and review of the circumstances of death and the clinical history Despite the success of the Back to Sleep campaigns to reduce the risks introduced worldwide the frequency of SIDS striking one infant every 750 1 000 live births has not significantly declined in the last years Sudden Intrauterine Unexplained Death Syndrome SIUDS referring to fetuses that die unexpectedly particularly in the last weeks of gestation without any cause even after a complete autopsy including examination of the placental disk umbilical cord and fetal membranes has a six eightfold greater incidence than that of SIDS Even if the pathogenetic mechanism of these deaths has not yet been determined the neuropathology seems to be a consistent substrate in both SIUDS and SIDS Subtle common developmental abnormalities of brainstem nuclei checking the vital functions have been highlighted frequently related to environmental risk factors such as cigarette smoke air and water pollution pesticides food contamination etc Exogenous toxic factors can in fact interact in complex ways with the genetic constitution of the infant leading to polymorphisms and or mutations of specific genes as polymorphisms of the serotonin transporter gene 5 HTT the regulator of the synaptic serotonin concentration and of the PHOX2B the key gene in the Congenital Central Hypoventilation Syndrome These interactions can directly injure the development of the autonomic nervous system frequently resulting in hypoplasia of the vital brainstem centers and consequently in sudden death It is very important to continue studying these syndromes and in particular identify all possible congenital alterations and their correlation with the exposure to environmental risk factors in order to reduce their incidence and mitigate the surrounding social concern The goal of this research topic is to propose new approaches to explain the pathogenesis of both SIUDS and SIDS and consequently new prevention strategies to decrease the incidence of these unexpected and very devastating events for families Expert authors in the Topic field are encouraged to submit original research articles aimed to widen the current knowledge on the pathological substrates of these deaths also considering the correlations with possible risk factors Submissions of hypotheses opinions and commentaries are also welcome This Research Topic would lead to development of targeted risk lowering strategies to reduce the incidence of both SIUDS and SIDS Furthermore the adoption of appropriate preventive measures could also lead to improve the quality of life in adults promoting active and healthy aging Encyclopedia of Immunobiology ,2016-04-27 Encyclopedia of Immunobiology Five Volume Set provides the largest integrated source of immunological knowledge currently available It consists of broad ranging validated summaries on all of the major topics in the field as written by a team of leading experts The large number

of topics covered is relevant to a wide range of scientists working on experimental and clinical immunology microbiology biochemistry genetics veterinary science physiology and hematology The book is built in thematic sections that allow readers to rapidly navigate around related content Specific sections focus on basic applied and clinical immunology The structure of each section helps readers from a range of backgrounds gain important understanding of the subject Contains tables pictures and multimedia features that enhance the learning process In depth coverage allows readers from a range of backgrounds to benefit from the material Provides handy cross referencing between articles to improve readability including easy access from portable devices

The Oxford Handbook of Acculturation and Health Seth J. Schwartz, Jennifer Unger, 2017-08-10 The Oxford Handbook of Acculturation and Health expertly brings together two very distinct but complementary streams of work and thought theoretical and methodological work on acculturation and the applied work linking acculturation to various health outcomes among international migrants and their families In this important volume the work of landmark acculturation theorists and methodologists come together to showcase applied epidemiologic and intervention work on the issues facing acculturation and public health today Edited by Seth J Schwartz and Jennifer B Unger this Handbook is divided into two important parts for readers Part one features chapters that are dedicated to theoretical and methodological work on acculturation including definitional issues measurement issues and procedures for studying acculturation across immigrant groups and national contexts The second part focuses on the links between acculturation and various health outcomes such as obesity physical activity drug and alcohol abuse mental health delinquency and suicide Notably because a majority of the research on acculturation and health has been conducted on Hispanic immigration this volume contextualizes that research and offers readers compelling insight for how to apply these principles to other immigrant groups in the United States and around the world
