**An Address to Men of Science** Richard Carlile, 2021-04-26 In *An Address to Men of Science*

Richard Carlile presents a compelling critique of the scientific community in the early 19th century urging practitioners to uphold the principles of rational inquiry and challenge dogmatic beliefs that stifle advancement. This text is characterized by Carlile's passionate prose marked by fervent advocacy for science as a vehicle for social progress. Written against the backdrop of the turbulent Enlightenment period, the book seeks to reinvigorate the dialogue between science and the public, asserting that knowledge should not be monopolized or dismissed in favor of superstition. Richard Carlile, a notable radical thinker and publisher, was heavily influenced by the socio-political climate of his time, which often juxtaposed scientific progress with religious orthodoxy. Born in 1790, his commitment to free thought and personal liberty shaped his criticisms of societal norms. Carlile's unwavering advocacy for scientific education stemmed from personal experiences and observations of the hostility faced by progressive thinkers, motivating him to address the responsibilities of the scientific community in the face of ignorance. Readers captivated by the intersection of science and society will find Carlile's address both enlightening and provocative. *An Address to Men of Science* encourages a dialogue that transcends time, inviting contemporary scholars and laypersons alike to reconsider the role of intellectuals in public discourse. This book challenges us to reflect on our own responsibilities in promoting knowledge and understanding.

Issues for 1896-1900 contain papers of the Aristotelian Society    The Scientific Basis of National Progress G. Gore, 2019-05-29. Published in 1970. The leading idea of the book is that present knowledge only enables us to maintain our present state; that national progress is the result of new ideas and that the chief source of new ideas is original research. That as advance has its origin in new knowledge, unless new discoveries are made, new inventions and improvements must sooner or later cease. Another prominent idea is that truth is essentially the same in all divisions of knowledge and that the mental powers and processes employed in detecting it are the same in all subjects.
