
SCIENTIFIC METHODS OF DETECTING DECEPTION

It is the method of gathering and knowing from the subject about the crime dispute or the question of issue employing the use of machine or device, drugs or substances and other accessory means. Most of the test are not reliable to be true and thus the information gathered are not admissible in court as evidence but only important to be used for further investigation.

1. Lie Detector Test- A test used to record the physiological changes associated with lying subject. The polygraph machine will record the blood pressure, respiratory rate and the skin resistance to electricity in a chart paper. Although the polygraph has been used extensively as an investigative aid in assisting law enforcement agencies in reducing the number of suspects in a particular offense and also used as pre-employment examination in business and industry, there are about 5 percent of the tests that are inconclusive because of the drawback. Some test showed positive results and yet the subject is innocent can other test gave negative result to guilty subject. In business and industry, the device is used to inquire deliberate falsification of application and other documents, illicit use of drugs, and thief of money or merchandized from the previous employers. In spite of the drawbacks and unreliable results that it may not admissible in court, modification s and improvement in the machine have been done. In some countries like in the United State, the result f the test as evidence is steadily moving towards the direction of admissibility in court, while the Philippines it still not admissible in court.

2. Administration of Truth Serum or Narco-analysis- This is a detecting deception method using narcotic or anesthetic drug in order to get information from the subject.

DRUG USED- (TRUTH SERUM)

- | | |
|-----------------------------------|---|
| 1. Hyocine Hydro bromide | 6. Methyl phenidate |
| 2. Sodium amytal | 7. Droperidol |
| 3. Penthotal | 8. Scopolamine |
| 4. Seconal and other barbiturates | 9. Tricholorocthylene (Anesthetic drug) |
| 5. Methedrine | |

3. Hypnotism- This method was introduced by an Australian Physician Franz (Friedrich) Anton Mesmer (1734-1815) in 1778. He believed in animal magnetism, by which in his own personal electro- magnetism, Therapeutic effect influenced other persons. These effects produced were attributed to the state of mind of a subject whereby he is set up, and thereby instructed. to sit quietly and gazed at flashing light or shiny object tangled in front of his eyes and to cooperate with whatever the hypnotist like him to do.

Detected deception through hypnosis was not admissible in court due to the following.

1. In lacks the general scientific acceptance of the reliability of hypnosis in ascertaining the truth from falseness.
2. The possibility that the hypnotized subject will deliberately fabricate.
3. The prospect that the state of heightened suggestibility in which the hypnotized subjects is suspended will produce distortion of the fact rather than the truth.
4. The state of the mind and professionalism of the examiner are too subjective to permit admissibility of the expert testimony.

Rethinking Risk and the Precautionary Principle Julian Morris, 2000-10-03 Rethinking Risk and the Precautionary Principle challenges the claim that the precautionary principle is an appropriate guide to public policy decision making in the face of uncertainty The precautionary principle is frequently invoked as a justification for regulating human activities From bans on the use of growth hormones in cattle to restrictions on children's playground activities precautionary thinking seems to be taking over our lives As the contributors to this book show such an approach is of dubious utility and may even be counterproductive This is a timely and important contribution to the debate on how to manage risk in the modern world The editor Julian Morris is Director of the Environment and Technology Programme at the Institute of Economic Affairs in London He has written widely on issues relating to environmental protection and technological development Up to date discussion of current issues and scientific controversies Challenges the claim that the precautionary principle is an appropriate guide to public policy decisions

Ethics, Tools and the Engineer Raymond Spier, 2001-02-26 Modern society faces two problems the development of acceptable methods for the introduction of new and powerful tools and the need for a trustworthy universally applicable ethical system Part of the problem may be attributed to the lack of a reliable system of ethics that can be brought to bear on the issues of new biotechnology information technology

Unsettled (Updated and Expanded Edition) Steven E. Koonin, 2024-06-11 In this updated and expanded edition of climate scientist Steven Koonin's groundbreaking book go behind the headlines to discover the latest eye opening data about climate change with unbiased facts and realistic steps for the future Greenland's ice loss is accelerating Extreme temperatures are causing more fatalities Rapid climate action is essential to avoid a future climate disaster You've heard all this presented as fact But according to science all of these statements are profoundly misleading With the new edition of *Unsettled* Steven Koonin draws on decades of experience including as a top science advisor to the Obama administration to clear away the fog and explain what science really says and doesn't say With a new introduction this edition now features reflections on an additional three years of eye opening data alternatives to unrealistic net zero solutions global energy inequalities and the energy crisis arising from the war in Ukraine When it comes to climate change

the media politicians and other prominent voices have declared that the science is settled In reality the climate is changing but the why and how aren't as clear as you've probably been led to believe Koonin takes readers behind the headlines dispels popular myths and unveils little known truths Despite rising greenhouse gas emissions global temperatures decreased from 1940 to 1970 Models currently used to predict the future do not accurately describe the climate of the past and modelers themselves strongly doubt their regional predictions There is no compelling evidence that hurricanes are becoming more frequent or that predictions of rapid sea level rise have any validity Unsettled is a reality check buoyed by hope offering the truth about climate science what we know what we don't and what it all means for our future [Ethical Issues in Scientific Research](#)

Science's War On Reason Mike Hockney,2016-01-02 People can't reason They don't even know what reason is Reason is almost always harnessed to something that has nothing to do with reason Believers in mainstream religion are feeling types who reason with their emotions or with their mystical intuitions Scientists are sensing types They subordinate their reason to their senses All scientists are empiricists and are opposed to rationalism i.e. the existence of a rational order of reality completely removed from the human senses which can only be apprehended rationally logically mathematically and via intellectual intuition Scientists try to don the cloak of rationalism even though they are explicitly opposed to mathematical rationalism which addresses a more fundamental noumenal reality than the one amenable to phenomenal science

National Security Issues in Science, Law, and Technology Thomas A.
