The Rise of Modern Science: The scientific renaissance, 1450-1630, by M. Boas Alfred Rupert Hall,1962

The Body Emblazoned Jonathan Sawday,2013-10-16 An outstanding piece of scholarship and a fascinating read The Body Emblazoned is a compelling study of the culture of dissection the English Renaissance which informed intellectual enquiry in Europe for nearly two hundred years In this outstanding work Jonathan Sawday explores the dark morbid eroticism of the Renaissance anatomy theatre and relates it to not only the great monuments of Renaissance art but to the very foundation of the modern idea of knowledge Though the dazzling displays of the exterior of the body in Renaissance literature and art have long been a subject of enquiry The Body Emblazoned considers the interior of the body and what it meant to men and women in early modern culture A richly interdisciplinary work The Body Emblazoned reassesses modern understanding of the literature and culture of the Renaissance and its conceptualization of the body within the domains of the medical and moral the cultural and political

Latin Scientific Literature, 1450-1850 Martin Korenjak,2023-09-20 During the early modern period the emergence of what ultimately became modern science took place mainly in Latin the international language of educated discourse of the era Hundreds of thousands of scientific texts were published in Latin from the invention of print around 1450 to the demise of Latin as a language of science around 1850 Despite its importance our knowledge of this literature is extremely limited This book aims to provide an overview of this area the first ever to be written It does so not from the perspective of a natural scientist or a historian of science but of a literary scholar Instead of the scientific content or methodology of the respective works it focusses on the genres of scientific literature and their communicative functions Latin Scientific Literature 1450 1850 falls into two main parts The first part Contexts introduces four aspects of early modern intellectual culture which are crucial for an understanding of the scientific literature of the time the development of science the role of Latin the concept of literature and the rise of print Part two Texts offers an overview of Neo Latin scientific literature Subsumed under five communicative functions disclosing sources

Through 1967: Subjects University of California (System). Institute of Library Research, University of California, Berkeley, 1972 The Secret Formula Fabio Toscano, 2024-12-03 The legendary Renaissance math duel that ushered in the modern age of algebra The Secret Formula tells the story of two Renaissance mathematicians whose jealousies intrigues and contentious debates led to the discovery of a formula for the solution of the cubic equation Niccol Tartaglia was a talented and ambitious teacher who possessed a secret formula the key to unlocking a seemingly unsolvable two thousand year old mathematical problem He wrote it down in the form of a poem to prevent other mathematicians from stealing it Gerolamo Cardano was a physician gifted scholar and notorious gambler who would not hesitate to use flattery and even trickery to learn Tartaglia's secret Set against the backdrop of sixteenth century Italy The Secret Formula provides new and compelling insights into the peculiarities of Renaissance mathematics while bringing a turbulent and culturally vibrant age to life It was an era when mathematicians challenged each other in intellectual duels held outdoors before enthusiastic crowds Success not only enhanced the winner's reputation but could result in prize money and professional acclaim After hearing of Tartaglia's spectacular victory in one such contest in Venice Cardano invited him to Milan determined to obtain his secret by whatever means necessary Cardano's intrigues paid off In 1545 he was the first to publish a general solution of the cubic equation Tartaglia eager to take his revenge by establishing his superiority as the most brilliant mathematician of the age challenged Cardano to the ultimate mathematical duel A lively account of genius betrayal and all too human failings The Secret Formula reveals the epic rivalry behind one of the fundamental ideas of modern algebra **The Scientific Renaissance,**

1450-1630 Marie Boas, 1966 **From Discrete to Continuous** K. Neal, 2013-06-29 In the early modern period a crucial transformation occurred in the classical conception of number and magnitude Traditionally numbers were merely collections of discrete units that measured some multiple Magnitude on the other hand was usually described as being continuous or being divisible into parts that are infinitely divisible This traditional idea of discrete number versus continuous magnitude was challenged in the early modern period in several ways This detailed study explores how the development of algebraic symbolism logarithms and the growing practical demands for an expanded number concept all contributed to a broadening of the number concept in early modern England An interest in solving practical problems was not in itself enough to cause a generalisation of the number concept It was the combined impact of novel practical applications together with the concomitant development of such mathematical advances as algebraic notation and logarithms that produced a broadened number concept **Science Books for a School Library** Association for Science Education, 1968 Minerva Meets Vulcan: Scientific and Technological Literature - 1450-1750 Wolfgang Lefèvre, 2021-06-16 This book offers a comprehensive study and account of the co evolution of technological and scientific literature in the early modern period 1450 1750 It

examines the various relationships of these literatures in six areas of knowledge Architecture Chemistry Gunnery Mechanical Engineering Mining and Practical Mathematics which represent the main types of advanced technological and scientific knowledge of the era These six fields of technologically advanced knowledge and their interrelations and interactions with learned knowledge are investigated and discussed through a specific lens by focusing on the technological literature Among present day historians of science it hardly remains controversial that contact and exchange between educated and practical knowledge played a significant role in the development of the natural sciences and technology in early modern Europe Several paths for such exchange arose from the late Middle Ages onward due to the formation of an economy of knowledge that fostered contacts and exchange between the two worlds How can this development be adequately described and how on the basis of such a description can the significance of this process for the early modern history of knowledge in the West be assessed These are the overarching questions this book tries to answer There exists a considerable amount of literature concerning several stations and events in the course of this long development process as well as its various aspects As meritorious and indispensable as many of these studies are none of them tried to portray this process as a whole with its most essential branches What is more many of them implicitly or explicitly took physics as a model of science and thus highlighted mechanics and mechanical engineering as the model of all interrelations of practical and learned knowledge By contrast this book aims at a more complete portrait of the early modern interrelations and interactions between learned and practical knowledge It tries to convey a new idea of the variety and disunity of these relations by discussing and comparing altogether six widely different fields of knowledge and practice The targeted audience of this book is first of all the historians of science and technology As one of the peer reviewers suggested the book could very well become a textbook used for teaching the history of science and technology at universities Furthermore since the book addresses fundamental aspects of the significance emergence and development of modern science has for the self image of the West it can be expected that it will attract the attention and interest of a wider readership than professional historians
