Phillips, Stephen P. Norris, John S. Macnab, 2010-09-02 Science education at school level worldwide faces three perennial problems that have become more pressing of late These are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students The rst problem is the increasing intellectual isolation of science from the other subjects in the school curriculum Science is too often still taught didactically as a collection of pre determined truths about which there can be no dispute As a consequence many students do not feel any ownership of these ideas Most other school subjects do somewhat better in these regards For example in language classes students suggest different interpretations of a text and then debate the relative merits of the cases being put forward Moreover ideas that are of use in science are presented to students elsewhere and then re taught often using different terminology in science For example algebra is taught in terms of $x y z$ in mathematics classes but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics where $p v t$ are used The result is that students are confused and too often alienated leading to their failure to achieve that extraction of an education from a scheme of instruction which Jerome Bruner thought so highly desirable **Reading for Evidence and Interpreting Visualizations in Mathematics and Science Education** Stephen P. Norris, 2012-09-17 CRYSTAL Alberta was established to research ways to improve students understanding and reasoning in science and mathematics To accomplish this goal faculty members in Education Science and Engineering as well as school teachers joined forces to produce a resource bank of innovative and tested instructional

materials that are transforming teaching in the K 12 classroom Many of the instructional materials cross traditional disciplinary boundaries and explore contemporary topics such as global climate change and the spread of the West Nile virus Combined with an emphasis on the use of visualizations the instructional materials improve students engagement with science and mathematics Participation in the CRYSTAL Alberta project has changed the way I think about the connection between what I do as a researcher and what I do as a teacher I have learned how to better translate scientific knowledge into language and activities appropriate for students thereby transforming my own teaching I also have learned to make better connections between what students are learning and what is happening in their lives and the world thereby increasing students interest in the subject and enriching their learning experience Science Teachers' Use of Visual Representations

Billie Eilam, John K. Gilbert, 2014-07-11 This book examines the diverse use of visual representations by teachers in the science classroom It contains unique pedagogies related to the use of visualization presents original curriculum materials as well as explores future possibilities The book begins by looking at the significance of visual representations in the teaching of science It then goes on to detail two recent innovations in the field simulations and slowmation a process of explicit visualization It also evaluates the way teachers have used different diagrams to illustrate concepts in biology and chemistry Next the book explores the use of visual representations in culturally diverse classrooms including the implication of culture for teachers use of representations the crucial importance of language in the design and use of visualizations and visualizations in popular books about chemistry It also shows the place of visualizations in the growing use of informal self directed science education Overall the book concludes that if the potential of visualizations in science education is to be realized in the future the subject must be included in both pre service and in service teacher education It explores ways to develop science teachers representational competence and details the impact that this will have on their teaching The worldwide trend towards providing science education for all coupled with the increased availability of color printing access to personal computers and projection facilities has lead to a more extensive and diverse use of visual representations in the classroom This book offers unique insights into the relationship between visual representations and science education making it an ideal resource for educators as well as researchers in science education visualization and pedagogy **The**

Perspectives on Scientific Argumentation Myint Swe Khine, 2011-09-30 Argumentation arriving at conclusions on a topic through a process of logical reasoning that includes debate and persuasion has in recent years emerged as a central topic of discussion among science educators and researchers There is now a firm and general belief that fostering argumentation in learning activities can develop students critical thinking and reasoning skills and that dialogic and collaborative inquiries are key precursors to an engagement in scientific argumentation It is also reckoned that argumentation helps students assimilate knowledge and generate complex meaning

The consensus among educators is that involving students in scientific argumentation must play a critical role in the education process itself. Recent analysis of research trends in science education indicates that argumentation is now the most prevalent research topic in the literature. This book attempts to consolidate contemporary thinking and research on the role of scientific argumentation in education. *Perspectives on Scientific Argumentation* brings together prominent scholars in the field to share the sum of their knowledge about the place of scientific argumentation in teaching and learning. Chapters explore scientific argumentation as a means of addressing and solving problems in conceptual change reasoning, knowledge building, and the promotion of scientific literacy. Others interrogate topics such as the importance of language, discursive practice, social interactions, and culture in the classroom. The material in this book, which features intervention studies, discourse analyses, classroom-based experiments, anthropological observations, and design-based research, will inform theoretical frameworks and changing pedagogical practices as well as encourage new avenues of research.
