Dunn, 2007      *Scientific Basis for Nuclear Waste Management* Gregory J. McCarthy, 2012-12-06 During late 1978 a symposium entitled Science Underlying Radioactive Waste Management was one component of the Annual Meeting of the Materials Research Society held in Boston Massachusetts The purpose of this Symposium was to bring together for the first time the entire range of sciences that form the basis for the treatment solidification and isolation of radioactive wastes Some 79 papers were presented to an international audience of over 300 The Symposium was such an impressive success that another will be held at the 1979 Annual Meeting of the Materials Research Society The proceedings of the forthcoming symposium will also be published and it is for this reason that the present volume has been designated Volume 1 The scope of the Symposium was defined by the following steering committee Rustum Roy The Pennsylvania State University Chairman Richard S Claassen Sandia Laboratories Don Ferguson Oak Ridge National Laboratory Victor I Spitsyn U S S R Academy of Sciences Moscow David B Stewart United States Geological Survey Torbjorn Westermarck Royal Institute of Technology Stockholm The program was organized by the following committee Gregory J McCarthy The Pennsylvania State University Chairman Harry C Burkholder Battelle Memorial Institute Arnold M Friedman Argonne National Laboratory Werner Lutze Hahn Meitner Institut Berlin John G Moore Oak Ridge National Laboratory Robert W Potter II United States Geological Survey Richard L Schwoebel Sandia Laboratories Roger W Staehle Ohio State University      **Radioactive Waste Management**, 1981      Bibliographic Guide to Conference Publications New York Public Library. reactor systems Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of Comprehensive Nuclear Materials has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues Serves as an excellent entry point for students and researchers new to the field

**Environment** R. Gieré,Peter Stille,2004 This book provides incentives for further development of sustainable fuel cycles through a novel and interdisciplinary approach to an Earth science related topic The main focus is on geochemical concepts in immobilizing isolating or neutralizing waste derived from energy production and consumption The book also addresses the issue of using some types of energy derived waste as alternative raw materials Moreover it highlights research on how certain wastes can be used for energy production an increasingly important aspect of modern integrated waste management strategies The main objectives are to a identify the most serious environmental problems related to various types of power generation and associated waste accumulation b present strategies based on natural analogue materials for the immobilization of toxic and radioactive waste components through mineralogical barriers c discuss modern procedures for reuse of waste or certain waste components and d review the importance of geochemical modelling in describing and predicting the interaction between waste and the environment

*U.S. Geological Survey Research in Radioactive Waste*

*Disposal--fiscal Year 1979* ,1982 *Ageing Studies and Lifetime Extension of Materials* Les Mallinson,2012-12-06

The first International Conference on Ageing Studies and Lifetime Extension of Materials was held on th July 12 14 1999 at St Catherine s College Oxford United Kingdom Over 230 delegates attended during the three days and heard nearly ninety papers together with over thirty poster presentations Sixteen of these papers were keynotes from invited speakers eminent in their field of research The proceedings were organised into six separate sessions observation and understanding of real time and accelerated ageing experimental techniques modelling and theoretical studies lifetime prediction and validation lifetime extension and material design for ageing In doing this it was hoped to cover most issues of scientific concern in the field

of materials ageing One important aspect was that the conference did not concentrate on any particular group or type of material rather the aim was to attract contributions from workers engaged in ageing studies with as wide a range of materials as possible In this way it was hoped that delegates could interact with and learn from those whom they perhaps would not normally come across and that metallurgists could learn from polymer scientists ceramicists could talk to modellers and so on in this important field A read through the diverse papers contained within these proceedings will confirm that this aim was happily satisfied Why hold such a meeting In the modern world engineered systems are expected to last longer

**Groundwater Contamination: Use of Models in Decision-Making** G. Jousma, Jacob Bear, Y.Y. Haimes, F. Walter, 2012-12-06 The protection of groundwater resources has emerged in recent years as a high priority topic on the agenda of many countries In responding to the growing concern over deteriorating groundwater quality many countries are developing a comprehensive regulatory framework for the management of subsurface water resources with management referring to both quantity and quality aspects Within this framework groundwater models are rapidly coming to play a central role in the development of protection and rehabilitation strategies These models provide forecasts of the future state of the groundwater aquifer systems and of the unsaturated zone in response to proposed management initiatives For example models will predict the effects of implementing a proposed management scheme on water levels and on the transport and fate of pollutants The models are now used in the formulation of policies and regulations the issuing of permits design of monitoring and data collection systems and the development of enforcement actions The growth in the use of these sophisticated tools has led to many unforeseen problems in groundwater management Lingered issues include reliability of codes quality assurance in model development and applications efficient utilization of human and material resources technology transfer and training Some issues have legal ramifications as in cases where the applications of models have been contested in courts

**Geological Disposal of Radioactive Wastes and Natural Analogues** W. Miller, R. Alexander, N. Chapman, John C McKinley, J.A.T. Smellie, 2000-11-09 Many countries are currently exploring the option to dispose of highly radioactive solid wastes deep underground in purpose built engineered repositories A number of surface and shallow repositories for less radioactive wastes are already in operation One of the challenges facing the nuclear industry is to demonstrate confidently that a repository will contain wastes for so long that any releases that might take place in the future will pose no significant health or environmental risk One method for building confidence in the long term future safety of a repository is to look at the physical and chemical processes which operate in natural and archaeological systems and to draw appropriate parallels with the repository For example to understand why some uranium orebodies have remained isolated underground for billions of years Such studies are called natural analogues This book investigates the concept of geological disposal and examines the wide range of natural analogues which have been studied Lessons learnt from studies of archaeological and natural systems can be used to improve our capabilities for assessing the future safety of a radioactive
