Personality Psychology Nathan Brody, Howard Ehrlichman, 1998
This book presents personality from the perspective of existing research. It provides an overview of personality research and demonstrates the relationship between research and real individuals. Readers are encouraged to explore the relationship between the research and their own personalities. It also introduces primary source literature in personality psychology by covering the content, methods, and issues in the journals with minimal jargon.

Personality Psychology: The Science of Individuality presents content on its own merits rather than forcing it to fit existing theories. Readers avoid the sometimes inaccurate connections to historical theories found in other books on personality. The book also includes discussions often neglected in other books, such as entire separate chapters on intelligence and cognitive style, the unconscious, and evolutionary personality psychology. Readers will learn important areas in enough depth to appreciate the issues and complexities. The book always attempts to make clear why a particular study is important. This may facilitate the reader's ability to study the subject further.

Chapter Two includes a short personality questionnaire designed to measure the Big 5 factors. Since discussions of methodology refer back to the Big 5 factors throughout the book, readers benefit by having a personal involvement through their scores on the questionnaire. It may also help to make some of the material personally relevant.

A valuable book for any reader interested in understanding the existing research into personality or who wishes to understand more about his or her own personality.

The Person Dan P. McAdams, 2008-12-22
Drawing on cutting edge scientific research, classic personality theories, and stirring examples from biography and literature, *The Person* presents a lively and integrative introduction to the science of personality psychology. Author Dan McAdams organizes the field according to a broad conceptual perspective that has emerged in personality psychology over the past 10 years. According to this perspective, personality is made up of three levels of psychological individuality: dispositional traits, characteristic adaptations such as motives and goals, and integrative life stories. Traits, adaptations, and stories comprise the three most recognizable variations on psychological human nature grounded in the human evolutionary heritage and situated in cultural and historical context. The fifth edition of this beautifully written text expands and updates research on the neuroscience of personality traits and introduces new material on personality disorders, evolution, and religion, attachment in adulthood, continuity and change in personality over the life course, and the development of narrative identity.

The Science of Personality Lawrence A. Pervin, 1996
This introduction to the study of personality focuses on the results of current research. It explores such areas as personality development and the nature of personality while at the same time providing a historical context to the scientific examination of human personalities.
