Scientific Technology And Social Change:

Technology and Innovation for Social Change Satyajit Majumdar, Samapti Guha, Nadiya Marakkath, 2014-12-04

Tension exists between technologists and social thinkers because of the impact technology and innovation have on social values and norms which is often viewed as damaging to the cultural fabric of a nation or society. Since the global business environment is the context in which implementation of technology and innovation takes place, it is widely accepted as the major reason for such conflicts. In this backdrop, this edited book integrates independent research from across the globe. It deals with the nature and significance of technology innovation and social change as well as the relationships between them and discusses the significance of social entrepreneurship from social innovation and technology perspectives. Research areas covered are related to the development and deployment of technology innovation and knowledge in social change capabilities of institutions, models, role of government and corporate social responsibility and community involvement. Multiple aspects of social change are discussed in the context of India, Mexico, Thailand, Cambodia, Laos, Vietnam, Ethiopia, Nigeria, and other African countries. But society does not silently accept technologically enforced changes; sometimes technology is seen as an enemy of inclusive growth, and for many, economic development is an anti-thesis of social change. Selected case studies on sector-specific technologies such as the use of genetically modified seeds in agriculture, which has impacted the market and society, are critically analyzed to develop insights into the adoption of technology and its impact. At the same time, it examines policy-related issues without any bias in favor of or against a specific technology.

Scientific Technology and Social Change Gene I. Rochlin, 1974-01-01 [Rethinking Science, Technology, and Social Change](#) Ralph Schroeder, 2022

[Rethinking Science, Technology, and Social Change](#) challenges the prevailing notion that science and technology are constructed or socially shaped. The text puts forth a case for technological determinism based on a realistic and pragmatic account of science and technology informed by historical comparisons. Schroeder begins by exploring the social organization of scientific and technological advances, the intersecting trajectories of big science and technological systems, and the impact of science and technology on economic change. He goes on to discuss the social implications of technology, including the way that it affects politics and consumption. The book then rethinks traditional theories about the relationship between science, technology, and social change. The argument presented shifts the debate on topics such as the relationship between growth and sustainability and thus has important policy implications. This book will be of great interest to scholars, scientists, and anyone interested in understanding how science and technology are transforming our world.

Technology And Social Change In Rural Areas Gene F. Summers, 2019-07-11. Changes in China is translated from the original Chinese to provide a look into how scholars in China have been assessing their country's recent societal and political history. This volume and the others in the SSRC series provide western scholars with an accessible English language look at the state of current scholarship in China and as such does not simply provide information for the direct study of socio-political issues but also for meta-level analysis of how the domestic scholarship in China is developing and assessing the interplay of the country's political and economic reforms with the society and daily life of its people. *Research in Education*, 1973. Technological Shortcuts to Social Change Amitai Etzioni, Richard Remp, 1973-04-30. Evaluates a technological approach to social change which seeks to cure society's ills by dealing with its symptoms rather than root causes. It examines four such technological shortcuts in terms of their relevance to specific social problems: methadone in controlling heroin addiction, antabuse in treating alcoholism, the breath analyzer in highway safety, and gun control in reducing crime. The authors seek solutions which do not require large amounts of new resources or planning and will accelerate the pace of social change. They indicate that technological handling of such problems may be the answer.
