Making Things Happen A Theory Of Causal Explanation:

Making Things Happen James Woodward, 2005-10-27 Woodward's long awaited book is an attempt to construct a comprehensive account of causation explanation that applies to a wide variety of causal and explanatory claims in different areas of science and everyday life The book engages some of the relevant literature from other disciplines as Woodward weaves together examples counterexamples criticisms defenses objections and replies into a convincing defense of the core of his theory which is that we can analyze causation by appeal to the notion of manipulation *Making Things Happen* James Woodward, 2005-10-27 In *Making Things Happen* James Woodward develops a new and ambitious comprehensive theory of causation and explanation that draws on literature from a variety of disciplines and which applies to a wide variety of claims in science and everyday life His theory is a manipulationist account proposing that causal and explanatory relationships are relationships that are potentially exploitable for purposes of manipulation and control This account has its roots in the commonsense idea that causes are means for bringing about effects but it also draws on a long tradition of work in experimental design econometrics and statistics Woodward shows how these ideas may be generalized to other areas of science from the social scientific and biomedical contexts for which they were originally designed He also provides philosophical foundations for the manipulationist approach drawing out its implications comparing it with alternative approaches and defending it from common criticisms In doing so he shows how the manipulationist account both illuminates important features of successful causal explanation in the natural and social sciences and avoids the counterexamples and difficulties that infect alternative approaches from the deductive nomological model onwards *Making Things Happen* will interest philosophers working in the philosophy of science the philosophy of social science and metaphysics and as well as anyone interested in causation explanation and scientific methodology Causal Explanation in Historiography Veli Virmajoki, 2023-11-15 The book discusses recent developments in philosophy with regards to how historical events can be explained causally and introduces perspectives from the philosophy of science into the philosophy of history The book covers the main approaches to causal explanation in history and makes clear the main issues and concepts that are associated with such explanations For example the book discusses historical contingency and narratives among other issues The book is directed to philosophers of science philosophers of history historians historically oriented social scientists and everyone who is interested in how we make sense of the past Causality in the Sciences Phyllis Illari, Federica Russo, Jon Williamson, 2011-03-17 There is a need for integrated thinking about causality probability and mechanisms in scientific methodology Causality and probability are long established central concepts in the sciences with a corresponding philosophical literature examining their problems On the other hand the philosophical literature examining mechanisms is not long established and there is no clear idea of how mechanisms relate to causality and probability But we need some idea if we are to understand causal inference in the sciences a panoply of disciplines ranging from epidemiology to biology from

econometrics to physics routinely make use of probability statistics theory and mechanisms to infer causal relationships These disciplines have developed very different methods where causality and probability often seem to have different understandings and where the mechanisms involved often look very different This variegated situation raises the question of whether the different sciences are really using different concepts or whether progress in understanding the tools of causal inference in some sciences can lead to progress in other sciences The book tackles these questions as well as others concerning the use of causality in the sciences

The Volitional Theory of Causation W. J. Mander, 2023-01-10 This book presents a history of the volitional theory of causation the philosophical proposal that volition or will of the same or broadly the same stamp as that which we experience in our own deliberate and voluntary doings should be taken as the basis for all causality Few today know much about the volitional theory of causation and even fewer have given it any serious attention But if current opinion regards this suggestion as an unusual one of minor importance the historical record shows otherwise revealing that it is a theory which has been proposed and developed again and again throughout the modern era Its obscurity is only a recent phenomenon Starting at the beginning of the Early Modern period and progressing right up the modern times the historical discussion takes in both supporters and critics as well as both famous and less well known figures to tell the story of a long running debate which contemporary history of philosophy has forgotten The principal figures discussed are Berkeley Hume Reid Maine de Biran Schopenhauer Mansel Mill Martineau Alexander Campbell Fraser Borden Parker Bowne and G F Stout although many other philosophers are also considered The book ends with a consider of the philosophical merits of the theory

Ethics, Governance, and Policies in Artificial Intelligence Luciano Floridi, 2021-11-02 This book offers a synthesis of investigations on the ethics governance and policies affecting the design development and deployment of artificial intelligence AI Each chapter can be read independently but the overall structure of the book provides a complementary and detailed understanding of some of the most pressing issues brought about by AI and digital innovation Given its modular nature it is a text suitable for readers who wish to gain a reliable orientation about the ethics of AI and for experts who wish to know more about specific areas of the current debate

An Introduction to Criminological Theory and the Problem of Causation Jason Warr, 2017-01-24 This text offers a novel contribution to the literature on core criminological theory by introducing the complex issues relating to the structuring and analysing of causation This text traces the paradigm shift or drift that has occurred in the history of criminology and shows how the problem of causation has been a leading factor in these theoretical developments This short book is the first of its kind and is an introductory text designed to introduce both seasoned criminologists as well as students of criminology to the interesting intersections between the fields of criminology and the philosophy of the social sciences The problem of causation is notoriously difficult and has plagued philosophers and scientists for centuries Warr highlights the importance of grappling with this problem and demonstrates how it can lead to unsuccessful theorising and can prevent students from fully

appreciating the development of thinking in criminology This accessible account will prove to be a must read for scholars of criminal justice penology and philosophy of social science *Towards a Theory of Thinking* Britt Glatzeder, Vinod Goel, Albrecht Müller, 2010-03-20 What is Thinking Trying to Define an Equally Fascinating and Elusive Phenomenon Human thinking is probably the most complex phenomenon that evolution has come up with until now There exists a broad spectrum of definitions from subsuming almost all processes of cognition to limiting it to language based sometimes even only to formalizable reasoning processes We work with a medium sized definition according to which thinking encompasses all operations by which cognitive agents link mental content in order to gain new insights or perspectives Mental content is thus a prerequisite for and the substrate on which thinking operations are executed The largely unconscious acts of perceptual object stabilization categorization emotional evaluation and retrieving all the above from memory inscriptions are the processes by which mental content is generated and are therefore seen as prerequisites for thinking operations In terms of a differentia specifica the notion of thinking is seen as narrower than the notion of cognition and as wider than the notion of reasoning Thinking is thus seen as a subset of cognition processes and reasoning processes are seen as a subset of thinking Besides reasoning the notion of thinking includes also nonexplicit intuitive and associative processes of linking mental content According to this definition thinking is not dependant on language i.e. also many animals and certainly all mammals show early forms of thinking Mechanism and Causality in Biology and Economics Hsiang-Ke Chao, Szu-Ting Chen, Roberta L. Millstein, 2013-07-31 This volume addresses fundamental issues in the philosophy of science in the context of two most intriguing fields biology and economics Written by authorities and experts in the philosophy of biology and economics Mechanism and Causality in Biology and Economics provides a structured study of the concepts of mechanism and causality in these disciplines and draws careful juxtapositions between philosophical apparatus and scientific practice By exploring the issues that are most salient to the contemporary philosophies of biology and economics and by presenting comparative analyses the book serves as a platform not only for gaining mutual understanding between scientists and philosophers of the life sciences and those of the social sciences but also for sharing interdisciplinary research that combines both philosophical concepts in both fields The book begins by defining the concepts of mechanism and causality in biology and economics respectively The second and third parts investigate philosophical perspectives of various causal and mechanistic issues in scientific practice in the two fields These two sections include chapters on causal issues in the theory of evolution experiments and scientific discovery representation of causal relations and mechanism by models in economics The concluding section presents interdisciplinary studies of various topics concerning extrapolation of life sciences and social sciences including chapters on the philosophical investigation of conjoining biological and economic analyses with respectively demography medicine and sociology The Intelligent Design Debate and the Temptation of Scientism Erkki Vesa Rope Kojonen, 2016-04-28 The controversy over Intelligent Design ID has now continued for over two decades with no

signs of ending For its defenders ID is revolutionary new science and its opposition is merely ideological For its critics ID is both bad science and bad theology But the polemical nature of the debate makes it difficult to understand the nature of the arguments on all sides A balanced and deep analysis of a controversial debate this volume argues that beliefs about the purposiveness or non purposiveness of nature should not be based merely on science Rather the philosophical and theological nature of such questions should be openly acknowledged

Physical Theory Lawrence Sklar,2014 In nine new essays distinguished philosophers of science discuss outstanding issues in scientific methodology especially that of the physical sciences and address philosophical questions that arise in the exploration of the foundations of contemporary science

The Future of Scientific Practice Marta Bertolaso,2015-10-06 Focusing on cell dynamics molecular medicine and robotics contributors explore the interplay between biological technological and theoretical ways of thinking The collection makes a strong contribution to current debates in the philosophy of science and the changing role of scientific practice

A Tale of Two Cultures Gary Goertz,James Mahoney,2012-09-09 Some in the social sciences argue that the same logic applies to both qualitative and quantitative methods In A Tale of Two Cultures Gary Goertz and James Mahoney demonstrate that these two paradigms constitute different cultures each internally coherent yet marked by contrasting norms practices and toolkits They identify and discuss major differences between these two traditions that touch nearly every aspect of social science research including design goals causal effects and models concepts and measurement data analysis and case selection Although focused on the differences between qualitative and quantitative research Goertz and Mahoney also seek to promote toleration exchange and learning by enabling scholars to think beyond their own culture and see an alternative scientific worldview This book is written in an easily accessible style and features a host of real world examples to illustrate methodological points

Normativity and Naturalism in the Philosophy of the Social Sciences Mark Risjord,2016-01-22 Normativity and Naturalism in the Social Sciences engages with a central debate within the philosophy of social science whether social scientific explanation necessitates an appeal to norms and if so whether appeals to normativity can be rendered scientific This collection brings together contributions from a diverse group of philosophers who explore a broad but thematically unified set of questions many of which stem from an ongoing debate between Stephen Turner and Joseph Rouse both contributors to this volume on the role of naturalism in the philosophy of the social sciences Informed by recent developments in both philosophy and the social sciences this volume will set the benchmark for contemporary discussions about normativity and naturalism This collection will be relevant to philosophers of social science philosophers in interested in the rule following and metaphysics of normativity and theoretically oriented social scientists

The Routledge Handbook of Metaphysical Grounding Michael Raven,2020-05-04 Some of philosophy s biggest questions both historically and today are in virtue of questions In virtue of what is an action right or wrong In virtue of what am I the same person my mother bore In virtue of what is an artwork beautiful Philosophers attempt to answer many of these types of

in virtue of questions but philosophers are also increasingly focusing on what an in virtue of question is in the first place. Many assume at least as a working hypothesis that in virtue of questions involve a distinctively metaphysical kind of determinative explanation called ground. This Handbook surveys the state of the art on ground as well as its connections and applications to other topics. The central issues of ground are discussed in 37 chapters all written exclusively for this volume by a wide range of leading experts. The chapters are organized into the following sections: I History, II Explanation and Determination, III Logic and Structure, IV Connections, V Applications. Introductions at the start of each section provide an overview of the section's contents and a list of Related Topics at the end of each chapter points readers to other germane areas throughout the volume. The resulting volume is accessible enough for advanced students and informative enough for researchers. It is essential reading for anyone hoping to get clearer on what the biggest questions of philosophy are really asking.

Proofs and Research Programmes: Lakatos at 100 Roman Frigg, J. McKenzie Alexander, Laurenz Hudetz, Miklos Rédei, Lewis Ross, John Worrall, 2025-08-10. This open access book offers new insights into issues raised in philosophy of mathematics and in philosophy of science by Imre Lakatos. Lakatos was one of the most significant philosophers of the 20th Century and his ideas remain important and relevant today. November 2022 saw the centenary of Lakatos's birth and the event was marked by an international conference held at the LSE where Lakatos made his career after he had emigrated from Hungary to England. This volume consists of a selection of papers presented at the conference along with two additional contributions to debates about Lakatos's continuing influence and importance.

Consciousness, Social Theory and International Relations Derick Becker, 2024-12-30. This book engages contemporary research in the neurobiology of consciousness specifically how Integrated Information Theory (IIT) understands and models consciousness as an emergent phenomenon. In a thorough yet accessible discussion of IIT the book explores the implications of IIT for social science and International Relations theory particularly concerning the emergent nature of social and political systems. It is intended to be accessible to non-specialists and professional social scientists alike. The idea is to put forward a bold set of ideas that engage longstanding and contemporary debates in a format that is useful to scholars while remaining clear and cogent enough for the novice. The author's intention is to balance the scholarly in an accessible way primarily by making a few focused scholarly points elaborated with minimal esoteric language and relying on endnotes.

The Routledge Companion to Metaphysics Robin Le Poidevin, Simons Peter, McGonigal Andrew, Ross P. Cameron, 2009-04-02. The Routledge Companion to Metaphysics is an outstanding comprehensive and accessible guide to the major themes, thinkers and issues in metaphysics. The Companion features over fifty specially commissioned chapters from international scholars which are organized into three clear parts: History of Metaphysics, Ontology, Metaphysics and Science. Each section features an introduction which places the range of essays in context while an extensive glossary allows easy reference to key terms and definitions. The Routledge Companion to Metaphysics is essential reading for students of philosophy and anyone interested in surveying the central

topics and problems in metaphysics from causation to vagueness and from Plato and Aristotle to the present day The Quest for a Universal Theory of Intelligence Christian Hugo Hoffmann, 2022-05-09 Recent findings about the capabilities of smart animals such as corvids or octopi and novel types of artificial intelligence AI from social robots to cognitive assistants are provoking the demand for new answers for meaningful comparison with other kinds of intelligence This book fills this need by proposing a universal theory of intelligence which is based on causal learning as the central theme of intelligence The goal is not just to describe but mainly to explain queries like why one kind of intelligence is more intelligent than another whatsoever the intelligence Shiny terms like strong AI superintelligence singularity or artificial general intelligence that have been coined by a Babylonian confusion of tongues are clarified on the way Causality and Neo-Stages in Development Gerald Young, 2021-10-30 This book represents a broad integration of several major themes in psychology toward its unification Unifying psychology is an ongoing project that has no end point but the present work suggests several major axes toward that end including causality and activation inhibition coordination On the development side of the model building the author has constructed an integrated lifespan stage model of development across the Piagetian cognitive and the Eriksonian socioaffective domains The model is based on the concept of neo stages which mitigates standard criticisms of developmental stage models The new work in the second half of the book extends the primary work in the first half both in terms of causality and development Also the area of couple work is examined from the stage perspective Finally new concepts related to the main themes are represented including on the science formula executive function stress dysregulation disorder inner peace and ethics all toward showing the rich potential of the present modeling
