Man Apes Or Ape Men Discoveries In Africa:

Man-apes Or Ape-men? Wilfrid Edward Le Gros Clark, 1976 **The Strange Case of the Rickety Cossack** Ian Tattersall, 2015-06-09 In his new book *The Strange Case of the Rickety Cossack* human paleoanthropologist Ian Tattersall argues that a long tradition of human exceptionalism in paleoanthropology has distorted the picture of human evolution Drawing partly on his own career from young scientist in awe of his elders to crotchety elder statesman Tattersall offers an idiosyncratic look at the competitive world of paleoanthropology beginning with Charles Darwin 150 years ago and continuing through the Leakey dynasty in Africa and concluding with the latest astonishing findings in the Caucasus The book's title refers to the 1856 discovery of a clearly very old skull cap in Germany's Neander Valley The possessor had a brain as large as a modern human but a heavy low braincase with a prominent brow ridge Scientists tried hard to explain away the inconvenient possibility that this was not actually our direct relative One extreme interpretation suggested that the preserved leg bones were curved by both rickets and by a life on horseback The pain of the unfortunate individual's affliction had caused him to chronically furrow his brow in agony leading to the excessive development of bone above the eye sockets The subsequent history of human evolutionary studies is full of similarly fanciful interpretations With tact and humor Tattersall concludes that we are not the perfected products of natural processes but instead the result of substantial doses of random happenstance **MORPHOLOGY OF THE PRIMATES AND HUMAN EVOLUTION** R. P.

SRIVASTAVA, 2009-03-03 This book presents a detailed account of the morphological features of the primates and in the process it provides a clear exposition of the story of human evolution It discusses the theories of biological evolution the origin of the primates the morphology of the living primates the social behaviour of the nonhuman primates and the phylogenetic relationship between the large apes and man on the basis of immunological and molecular analyses The text focuses on the Miocene hominoids and their role in the subsequent developments of the hominids It discusses three theories the Single Lineage Theory the Double Lineage Theory and the Triple Lineage Theory developed through the study of the anatomical features of the australopithecine fossils found mainly in South and East Africa The text also gives up to date information on the recent discoveries of several hominid species The emergence of *Homo erectus* from one of the australopithecines its cultural attainments and the gradual transition to modern man are described in the text The doubts about the phylogenetic lineage of the Neanderthals and the emergence of the early *Homo sapiens* in the context of human evolution form the basis of various theories regarding the evolution of modern man These theories are thoroughly examined in the text **KEY FEATURES** Discusses immunological and molecular approaches to primate phylogeny and various dating techniques Includes a number of figures flow charts and phylogenetic trees to help readers understand the concepts clearly Provides a Glossary of technical terms and contributions of some eminent persons to the subject This book is designed for undergraduate and postgraduate students of Anthropology and Archaeology Besides students appearing in competitive

examinations will also find the book beneficial The Evolution of the Primate Hand Tracy L. Kivell, Pierre Lemelin, Brian G. Richmond, Daniel Schmitt, 2016-08-10 This book demonstrates how the primate hand combines both primitive and novel morphology both general function with specialization and both a remarkable degree of diversity within some clades and yet general similarity across many others Across the chapters different authors have addressed a variety of specific questions and provided their perspectives but all explore the main themes described above to provide an overarching primitive primate hand thread to the book Each chapter provides an in depth review and critical account of the available literature a balanced interpretation of the evidence from a variety of perspectives and prospects for future research questions In order to make this a useful resource for researchers at all levels the basic structure of each chapter is the same so that information can be easily consulted from chapter to chapter An extensive reference list is provided at the end of each chapter so the reader has additional resources to address more specific questions or to find specific data **The Fossil Trail** Ian Tattersall, 1995 In *The Fossil Trail* Ian Tattersall the head of the Anthropology Department at the American Museum of Natural History takes us on a sweeping tour of the study of human evolution offering a colorful history of fossil discoveries and a revealing insider's look at how these finds have been interpreted and misinterpreted through time All the major figures and discoveries are here We meet Lamarck and Cuvier and Darwin we learn that Darwin's theory of evolution though a bombshell was very congenial to a Victorian ethos of progress right up to modern theorists such as Niles Eldredge and Stephen Jay Gould **Ancestral Passions** Virginia Morell, 2011-01-11 This biography of the First Family of anthropology reveals how their discoveries collaborations and rivalries contributed to our own knowledge of the origins of humankind In this fascinating and authoritative work acclaimed science writer Virginia Morell brings to vivid life the famous and infamous Leakey family pioneers in the field of paleoanthropology Louis Leakey the patriarch who persisted through initial scientific failures and scandal ridden divorce to achieve spectacular success in digs throughout East Africa Mary his second wife who worked alongside Louis as they made their outstanding discoveries at Olduvai Gorge and elsewhere and Richard their son who ascended to the top of the field in his parents wake only to be threatened with both near fatal illness and fierce professional rivalry Morell transports us into the world of these compelling personalities demonstrating how a small clan of highly talented and fiercely competitive people came to dominate an entire field of science and to contribute immeasurably to our understanding of the origins of humanity *Scientific Racism in Modern South Africa* Saul Dubow, 1995-06-30 A study of the history of intellectual and scientific racism in modern South Africa Primate Locomotion Farish A. Jr. Jenkins, 2012-12-02 *Primate Locomotion* discusses researches on the concept of primate locomotion It is organized into 11 chapters that cover biomechanical principles which are the foundation of understanding of locomotor adaptations This book first gives an introduction to parallels and analogs between mammalian and mechanical structures It then describes the mechanisms of arboreal mammal locomotion as well as the behavioral observations and locomotor patterns of tree shrew The jumping

locomotion of *Galago alleni* and the role of wrist specialization in the locomotor evolution of the Hominoidea are also explained. The subsequent chapter discusses the relationship between the mechanical features of the scapula and shoulder region and the characteristics of locomotor behavior. A chapter also discusses the adaptive nature of postural behavior in quadrupedal primates represented by the New and Old World monkeys. Moreover, this book examines the morphological differences between living Insectivora, Carnivora, Primates and the relevant known fossils of Cretaceous and Early Tertiary Eutheria. This is to evaluate the origins, evolution and function of the Tarsus. Another chapter presents a functional analysis of most of the foot skeleton, primarily the Lemuriformes. The concluding chapters deal with electromyographical studies on gorillas, the mechanics of knuckle walking, the theories on hominoid phylogeny and the locomotor adaptations in prosimians. This text is intended not only for researchers dealing with primate locomotion but equally for students and others who share an interest in mammals and locomotor adaptations.

Debating Humankind's Place in Nature, 1860-2000 Richard G. Delisle, 2015-07-14. This text, the only one of its kind on the market, surveys the development of the field of human evolution from its inception through today. It provides students with a broad contrast enabling them to fully understand the value and role of current paleoanthropological research. Features: An historical approach. Establishes for students the nature of paleoanthropology through the historical development of the field from 1860 through 2000 and shows students that paleoanthropology is a remarkably progressive field. A focus on the debates in the field of human evolution, especially the phylogenetic or genealogical debates. Analyzes four distinct debates presented separately from their inception to the present: 1. Humankind's place among the primates. 2. The place of the australopithecines relative to the human line. 3. Debates on human phylogeny proper. 4. Proposed scenarios of hominization. Presentation and analysis of the viewpoints of over 150 scholars. Gives students a valuable reference work for the future, includes over 1200 references in the bibliography as well as a comprehensive text for today. For junior/senior courses in Human Evolution and Paleoanthropology in Anthropology departments.

General History of Africa International Scientific Committee for the drafting of a General History of Africa, 1981-12-31. One of UNESCO's most important publishing projects in the last thirty years, the General History of Africa marks a major breakthrough in the recognition of Africa's cultural heritage. Offering an internal perspective of Africa, the eight-volume work provides a comprehensive approach to the history of ideas, civilizations, societies and institutions of African history. The volumes also discuss historical relationships among Africans as well as multilateral interactions with other cultures and continents.

Evolution of The Brain and Intelligence Harry Jerison, 2012-12-02. Evolution of the Brain and Intelligence covers the general principles of behavior and brain function. The book is divided into four parts encompassing 17 chapters that emphasize the implications of the history of the brain for the evolution of behavior in vertebrates. The introductory chapter covers the studies of animal behavior and their implications about the nature of the animal's world. The following

chapters emphasize methodological issues and the meanings of brain indices and brain size as well as the general anatomy of the brain Other chapters discuss the history of the brain in the major vertebrate groups that were known about 300 million years ago to determine the fate of these early vertebrate groups Discussions on broad trends in evolution and their implications for the evolution of intelligence are also included Substantive matter on the brains bodies and associated mechanisms of behavior of vertebrates are covered in the remaining chapters of the book with an emphasis on evolution above the species level This book is of value to anthropologists behavioral scientists zoologists paleontologists and neurosciences students

Understanding Human Evolution Ian Tattersall,2022-07-28 Human life and how we came to be is one of the greatest scientific and philosophical questions of our time This compact and accessible book presents a modern view of human evolution Written by a leading authority it lucidly and engagingly explains not only the evolutionary process but the technologies currently used to unravel the evolutionary past and emergence of Homo sapiens By separating the history of palaeoanthropology from current interpretation of the human fossil record it lays numerous misconceptions to rest and demonstrates that human evolution has been far from the linear struggle from primitiveness to perfection that we ve been led to believe It also presents a coherent scenario for how Homo sapiens contrived to cross a formidable cognitive barrier to become an extraordinary and unprecedented thinking creature Elegantly illustrated Understanding Human

Evolution is for anyone interested in the complex and tangled story of how we came to be Methodology and African Prehistory Jacqueline Ki-Zerbo,Unesco. International Scientific Committee for the Drafting of a General History of Africa,1981 The result of years of work by scholars from all over the world The UNESCO General History of Africa reflects how the different peoples of Africa view their civilizations and shows the historical relationships between the various parts of the continent Historical connections with other continents demonstrate Africa s contribution to the development of human civilization Each volume is lavishly illustrated and contains a comprehensive bibliography

The Human Lineage Matt Cartmill,Fred H. Smith,2009-03-30 This textbook aimed at advanced undergraduates and postgraduates in paleoanthropology courses tackles a rather difficult task that of presenting the substantial body of paleontological genetic geological and archaeological evidence regarding human evolution and the associated scientific history in a logical and readable way without sacrificing either clarity or detail the sheer quality of the writing and explanatory synthesis in this book will undoubtedly make it a valuable resource for students for many years PaleoAnthropology 2010 This book focuses on the last ten million years of human history from the hominoid radiations to the emergence and diversification of modern humanity It draws upon the fossil record to shed light on the key scientific issues principles methods and history in paleoanthropology The book proceeds through the fossil record of human evolution by historical stages representing the acquisition of major human features that explain the success and distinctive properties of modern Homo sapiens Key features Provides thorough coverage of the fossil record and sites with data on key variables such as cranial capacity and body size estimates Offers a

balanced critical assessment of the interpretative models explaining pattern in the fossil record Each chapter incorporates a Blind Alley box focusing on once prevalent ideas now rejected such as the arboreal theory seed eating single species hypothesis and Piltdown man Promotes critical thinking by students while allowing instructors flexibility in structuring their teaching Densely illustrated with informative well labelled anatomical drawings and photographs Includes an annotated bibliography for advanced inquiry Written by established leaders in the field providing depth of expertise on evolutionary theory and anatomy through to functional morphology this textbook is essential reading for all advanced undergraduate students and beginning graduate students in biological anthropology
