Earth-Moon Relationships Cesare Barbieri, Francesca Rampazzi, 2013-06-29 Sediments and sedimentary processes on the Moon and Earth are very different. In the absence of water an atmosphere the magnetosphere and much less oxygen in its rocks the Moon has neither clay minerals nor carbonates and no Fe₃. Mechanical weathering by impacts is the principal process of sediment generation on the Moon. On Earth chemical weathering predominates. Whereas processes of sediment transport are principally ballistic on the Moon movement by air water and ice prevail on the Earth. The radical differences between Earth and Moon sediments make them useful end members between which all sediments of all terrestrial planetary bodies are expected to lie. The purpose of this paper is 1 to compare and contrast major characteristics of the origin transportation deposition and preservation of sediments especially dust in the Earth and the Moon and 2 to suggest how sediments of other rocky planetary bodies especially Mars may fit in between the sediments of the Earth and the Moon.

Whitaker, 2003-12-11 Almost 30 years after the Apollo missions Tranquillity Base Hadley Rille or Taurus Littrow are names still resonant with the enormous achievements represented by the lunar landings. But how did these places get their names? Who named Copernicus Crater? Where did all those names on lunar maps come from and what stimulated their selection? Ewen Whitaker traces the origins and evolution of the present day systems for naming lunar features such as craters mountains valleys and dark spots. The connections between the prehistoric and historic names and today's gazetteer are clearly described. Beautiful lunar maps spanning four centuries of progress wonderfully illustrate the unfolding of our ability to map the Moon. Rare early photographs add to the sense of history. What most of us don't realize is that this simple chase game is in fact an application of pursuit theory and that the same principles of games like tag dodgeball and hide and seek are also at play in military strategy high seas chases by the Coast Guard and even romantic pursuits. In *Chases and Escapes* Paul Nahin gives us the first complete history of this fascinating area of mathematics from its classical analytical beginnings to the present day. Drawing on game theory geometry linear algebra target tracking algorithms and much more Nahin also offers an array of challenging puzzles with their historical background and broader applications. *Chases and Escapes* includes solutions to all problems and provides computer programs that readers can use for their own cutting edge analysis.
