**Riemannian Geometry of Contact and Symplectic Manifolds** David E. Blair, 2010-08-14 This second edition divided into fourteen chapters presents a comprehensive treatment of contact and symplectic manifolds from the Riemannian point of view. The monograph examines the basic ideas in detail and provides many illustrative examples for the reader. Riemannian Geometry of Contact and Symplectic Manifolds Second Edition provides new material in most chapters but a particular emphasis remains on contact manifolds. Researchers, mathematicians and graduate students in contact and symplectic manifold theory and in Riemannian geometry will benefit from this work. A basic course in Riemannian geometry is a prerequisite.

**Geometry of Cauchy-Riemann Submanifolds** Sorin Dragomir, Mohammad Hasan Shahid, Falleh R. Al-Solami, 2016-05-31 This book gathers contributions by respected experts on the theory of isometric immersions between Riemannian manifolds and focuses on the geometry of CR structures on submanifolds in Hermitian manifolds. CR structures are a bundle theoretic recast of the tangential Cauchy-Riemann equations in complex analysis involving several complex variables. The book covers a wide range of topics such as Sasakian geometry, Kaehler and locally conformal Kaehler geometry, the tangential CR equations, Lorentzian geometry, holomorphic statistical manifolds and paraquaternionic CR submanifolds. Intended as a tribute to Professor Aurel Bejancu who discovered the notion of a CR submanifold of a Hermitian manifold in 1978, the book provides an up-to-date overview of several topics in the geometry of CR submanifolds. Presenting detailed information on the most recent advances in the area, it represents a useful resource for mathematicians and physicists alike.

Wiener gave a series of lectures on Fourier analysis at the University of Cambridge One result of Wiener's visit to Cambridge was his well known text *The Fourier Integral and Certain of its Applications* another was a paper by G H Hardy in the 1933 Journal of the London Mathematical Society As Hardy says in the introduction to this paper This note originates from a remark of Prof N Wiener to the effect that if  $f$  and  $g$  cannot both be very small The theory pair of transforms which follow give the most precise interpretation possible of Wiener's remark Hardy's own statement of his results lightly paraphrased is as follows in which  $f$  is an integrable function on the real line and  $\hat{f}$  is its Fourier transform  $x \mapsto \int_{-\infty}^{\infty} f(t) e^{-itx} dt$  If  $f$  and  $\hat{f}$  are both 0 for large  $|x|$  and some  $m$  then each is a finite linear combination of Hermite functions In particular if  $f$  and  $\hat{f}$  are both 0 for  $|x| > m$  then  $\int_{-\infty}^{\infty} |f(x)|^2 dx = \int_{-\infty}^{\infty} |\hat{f}(x)|^2 dx = A e^{-\pi^2 m^2 / 4}$  where  $A$  is a constant and if one of  $f$  or  $\hat{f}$  is 0 then both are null

Flag Varieties and Representation Theory Shrawan Kumar,2012-12-06 Kac-Moody Lie algebras were introduced in the mid 1960s independently by V Kac and R Moody generalizing the finite dimensional semisimple Lie algebras which we refer to as the finite case The theory has undergone tremendous developments in various directions and connections with diverse areas abound including mathematical physics so much so that this theory has become a standard tool in mathematics A detailed

treatment of the Lie algebra aspect of the theory can be found in V Kac's book Kac 901 This self contained work treats the algebro geometric and the topological aspects of Kac Moody theory from scratch The emphasis is on the study of the Kac Moody groups  $G$  and their flag varieties  $XY$  including their detailed construction and their applications to the representation theory of  $g$  In the finite case  $G$  is nothing but a semisimple  $Y$  simply connected algebraic group and  $X$  is the flag variety  $G/P$  for a parabolic subgroup  $P \subset G$  *Studies in Memory of Issai Schur* Anthony Joseph,2003 This volume Studies in Memory of Issai Schur was conceived as a tribute to Schur's of his tragic end His impact on great contributions to mathematics and in remembrance of mathematicians Representation Theory alone was so great that a significant number of Researchers TMR Network in the European Community Training and Mobility Orbits Crystals and Representation Theory in operation during the period 1997–2002 have been occupied with what has been called Schur theory Consequently this volume has the additional purpose of recording some of the significant results of the network It was furthermore appropriate that invited contributors should be amongst the speakers at the Paris Midterm Workshop of the network held at Chevaleret during 21–25 May 2000 as well as those of the Schur Memoriam Workshop held at the Weizmann Institute Rehovot during 27–31 December 2000 The latter marked the sixtieth anniversary of Schur's passing and took place in the 125th year of his birth

### **Complex Convexity and Analytic Functionals**

Mats Andersson,Mikael Passare,Ragnar Sigurdsson,2012-12-06 A set in complex Euclidean space is called  $C$  convex if all its intersections with complex lines are contractible and it is said to be linearly convex if its complement is a union of complex hyperplanes These notions are intermediates between ordinary geometric convexity and pseudoconvexity Their importance was first manifested in the pioneering work of Andr Martineau from about forty years ago Since then a large number of new related results have been obtained by many different mathematicians The present book puts the modern theory of complex linear convexity on a solid footing and gives a thorough and up to date survey of its current status Applications include the Fantappi transformation of analytic functionals integral representation formulas polynomial interpolation and solutions to linear partial differential equations
